## Authorized Identity-and-Access-Management-Architect Exam Dumps, Latest Identity-and-Access-Management-Architect Dumps Book

After so many years' development, our Identity and Access Management Designer exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our Identity-and-Access-Management-Architect guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine. Lead2Passed have most professional team to compiled and revise Identity-and-Access-Management-Architect Exam Question. In order to try our best to help you pass the exam and get a better condition of your life and your work, our team worked day and night to complete it. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of our practice materials that you can pass the exam easily, this is simply unimaginable.

Earning the Salesforce Certified Identity and Access Management Architect certification demonstrates to employers and clients that an individual has a deep understanding of Salesforce security architecture and can design and implement secure and scalable identity and access management solutions. Salesforce Certified Identity and Access Management Architect certification is an excellent investment for professionals who want to advance their careers in Salesforce architecture and security.

Salesforce Certified Identity and Access Management Architect certification exam is a proctored exam that consists of 60 multiple-choice questions. Candidates have 105 minutes to complete the exam, and the passing score is 70%. Identity-and-Access-Management-Architect Exam is available in English and costs \$400.

## Salesforce Certified Identity and Access Management Architect Sample Questions (Q209-Q214):

### NEW QUESTION # 209

Which two considerations should be made when implementing Delegated Authentication?  
Choose 2 answers

- A. It can be used to authenticate API clients and mobile apps.
- B. It requires trusted IP ranges at the User Profile level.
- C. Salesforce servers receive but do not validate a user's credentials.
- D. Just-in-time Provisioning can be configured for new users.
- E. The authentication web service can include custom attributes.

**Answer: A,D**

Explanation:

Delegated authentication is a feature that allows Salesforce to delegate the authentication process to an external service of your choice<sup>1</sup>. When implementing delegated authentication, you should consider the following aspects<sup>2</sup>:

\* The authentication web service can include custom attributes, such as user roles or permissions, in the response to Salesforce.

These attributes can be used to update user records or trigger workflows in Salesforce<sup>2</sup>.

\* Delegated authentication can be used to authenticate API clients and mobile apps that use the SOAP API or REST API login() methods. However, it does not support OAuth 2.0 flows or other authentication methods<sup>2</sup>.

\* Delegated authentication does not require trusted IP ranges at the User Profile level. However, you can use them to restrict access to Salesforce from specific IP addresses or ranges<sup>2</sup>.

\* Salesforce servers receive but do not validate a user's credentials. Instead, they pass the credentials to the external authentication service, which validates them and returns a response to Salesforce<sup>2</sup>.

\* Just-in-time provisioning can be configured for new users who log in with delegated authentication. This feature allows Salesforce to create or update user accounts based on the information provided by the external authentication service<sup>3</sup>.

Just-in-Time Provisioning for Delegated Authentication

### NEW QUESTION # 210

Northern Trail Outfitters is implementing a business-to-business (B2B) collaboration site using Salesforce Experience Cloud. The partners will authenticate with an existing identity provider and the solution will utilize Security Assertion Markup Language (SAML) to provide single sign-on to Salesforce. Delegated administration will be used in the Experience Cloud site to allow the partners to administer their users' access.

How should a partner identity be provisioned in Salesforce for this solution?

- A. Create a user and a related contact.
- B. Create only a contact.
- C. Create a contactless user.

- D. Create a person account.

**Answer: A**

Explanation:

Explanation

To provision a partner identity in Salesforce for a B2B collaboration site using SAML SSO, the identity architect should create a user and a related contact. A user record is required to authenticate and authorize the partner to access Salesforce resources. A contact record is required to associate the partner with an account, which represents the partner's organization. A contactless user or a person account are not supported for B2B collaboration sites. References: User and Contact Records for Partner Users, Create Partner Users

### NEW QUESTION # 211

Universal Containers(UC) has decided to build a new, highly sensitive application on Force.com platform. The security team at UC has decided that they want users to provide a fingerprint in addition to username/Password to authenticate to this application. How can an architect support fingerprint as a form of identification for Salesforce Authentication?

- A. Use custom login flows with callouts to a third-party fingerprint scanning application.
- B. Use Delegated Authentication with callouts to a third-party fingerprint scanning application.
- C. Use an AppExchange product that does fingerprint scanning with native Salesforce identity confirmation.
- D. Use Salesforce Two-factor Authentication with callouts to a third-party fingerprint scanning application.

**Answer: A**

Explanation:

D is correct because using custom login flows with callouts to a third-party fingerprint scanning application allows UC to support fingerprints as a form of identification for Salesforce authentication. Custom login flows allow UC to implement custom logic and UI elements for authentication, such as calling an external web service that performs fingerprint scanning and verification. A is incorrect because using Salesforce two-factor authentication with callouts to a third-party fingerprint scanning application does not support fingerprints as a form of identification for Salesforce authentication. Salesforce two-factor authentication requires users to enter a verification code or use an app like Salesforce Authenticator, not a fingerprint. B is incorrect because using delegated authentication with callouts to a third-party fingerprint scanning application does not support fingerprints as a form of identification for Salesforce authentication. Delegated authentication requires users to enter their username and password, not a fingerprint. C is incorrect because using an AppExchange product that does fingerprint scanning with native Salesforce identity confirmation does not support fingerprints as a form of identification for Salesforce authentication. AppExchange products are third-party applications that integrate with Salesforce, not native Salesforce features. Verified References: [Custom Login Flows], [Two-Factor Authentication], [Delegated Authentication], [AppExchange]

### NEW QUESTION # 212

Universal Containers (UC) is looking to build a Canvas app and wants to use the corresponding Connected App to control where the app is visible. Which two options are correct in regards to where the app can be made visible under the Connected App setting for the Canvas app? Choose 2 answers

- A. The sidebar of a Salesforce Console as a console component.
- B. As part of the body of a Salesforce Knowledge article.
- C. In the mobile navigation menu on Salesforce for Android.
- D. Included in the Call Control Tool that's part of Open CTI.

**Answer: A,D**

Explanation:

Explanation

The sidebar of a Salesforce Console as a console component and included in the Call Control Tool that's part of Open CTI are two options that are correct in regards to where the app can be made visible under the connected app settings for the Canvas app. A Canvas app is an external application that can be embedded within Salesforce using an iframe. A connected app is an application that integrates with Salesforce using APIs and uses OAuth as the authentication protocol. You can control where a Canvas app can be displayed in Salesforce by configuring the locations in the connected app settings. The sidebar of a Salesforce Console as a console component is a valid location for a Canvas app because it allows you to display the app as a collapsible panel on the side of any console app. Included in the Call Control Tool that's part of Open CTI is a valid location for a Canvas app because it allows

you to display the app as part of the softphone panel that integrates with your telephony system. As part of the body of a Salesforce Knowledge article is not a valid location for a Canvas app because it is not supported by the connected app settings. In the mobile navigation menu on Salesforce for Android is not a valid location for a Canvas app because it is not supported by the connected app settings. References: : [Canvas Developer Guide] : [Connected Apps Overview] : [Add or Remove Components from Your Console Apps] : [Open CTI Developer Guide]

### NEW QUESTION # 213

Universal Containers (UC) has an existing e-commerce platform and is implementing a new customer community. They do not want to force customers to register on both applications due to concern over the customers experience. It is expected that 25% of the e-commerce customers will utilize the customer community. The e-commerce platform is capable of generating SAML responses and has an existing REST-ful API capable of managing users. How should UC create the identities of its e-commerce users with the customer community?

- A. Use the standard Salesforce API to create users in the Community When a User is Created in the e-Commerce platform and use SAML to allow SSO.
- B. Use a nightly batch ETL job to sync users between the Customer Community and the e-commerce platform and use SAML to allow SSO.
- C. Use SAML JIT in the Customer Community to create users when a user tries to login to the community from the e-commerce site.
- D. Use the e-commerce REST API to create users when a user self-register on the customer community and use SAML to allow SSO.

**Answer: C**

Explanation:

The best option for UC to create the identities of its e-commerce users with the customer community is to use SAML JIT in the customer community to create users when a user tries to login to the community from the e-commerce site. SAML JIT (Just-in-Time) is a feature that allows Salesforce to create or update user accounts based on the information provided in a SAML assertion from an identity provider (IdP). This feature enables UC to avoid duplicating user registration on both applications and provide a seamless single sign-on (SSO) experience for its customers. The other options are not optimal for this scenario. Using the e-commerce REST API to create users when a user self-registers on the customer community would require the user to register twice, once on the e-commerce site and once on the customer community, which would degrade the customer experience. Using a nightly batch ETL job to sync users between the customer community and the e-commerce platform would introduce a delay in user creation and synchronization, which could cause errors or inconsistencies. Using the standard Salesforce API to create users in the community when a user is created in the e-commerce platform would require UC to write custom code and maintain API integration, which could increase complexity and cost. References: [Just-in-Time Provisioning for SAML], [Single Sign-On], [SAML SSO Flows]

### NEW QUESTION # 214

.....

Lead2Passed is a platform that will provide candidates with most effective Identity-and-Access-Management-Architect study materials to help them pass their Identity-and-Access-Management-Architect exam. It has been recognized by all of our customers, because it was compiled by many professional experts of our website. Not only did they pass their Identity-and-Access-Management-Architect Exam but also got a satisfactory score. These are due to the high quality of our Identity-and-Access-Management-Architect study torrent that leads to such a high pass rate as more than 98%. You will never feel disappointment about our Identity-and-Access-Management-Architect exam questions.
