Latest UiPath-ADPv1 Test Answers - Exam UiPath-ADPv1 Quiz

2026 Latest ActualPDF UiPath-ADPv1 PDF Dumps and UiPath-ADPv1 Exam Engine Free Share: https://drive.google.com/open?id=1LcDKTXda8vkLmluqZfCG3CzSntneVRXI

Although our company has designed the best and most suitable UiPath-ADPv1 learn prep, we also do not stop our step to do research about the UiPath-ADPv1 study materials. All experts and professors of our company have been trying their best to persist in innovate and developing the UiPath-ADPv1 test training materials all the time in order to provide the best products for all people and keep competitive in the global market. We believe that the UiPath-ADPv1 Study Materials will keep the top selling products. We sincerely hope that you can pay more attention to our UiPath-ADPv1 study questions.

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
Topic 2	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
Topic 3	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.

Topic 4	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.

Updated Latest UiPath-ADPv1 Test Answers and Practical Exam UiPath-ADPv1 Quiz & Correct New UiPath (ADPv1) Automation Developer Professional Exam Price

In your day-to-day life, things look like same all the time, but preparing for critical UiPath-ADPv1 practice exam is not one of those options. About the exam ahead of you this time, our UiPath-ADPv1 study braindumps will be your indispensable choices. Before you get the official one, you can estimate our quality by downloading the free demos. They are all masterpieces from processional experts and all content are accessible and easy to remember, so no need to spend a colossal time to practice on them. Just practice with our UiPath-ADPv1 Exam Guide on a regular basis and desirable outcomes will be as easy as a piece of cake. On some tricky questions, you don't need to think too much. Only you memorize our questions and answers of UiPath-ADPv1 study braindumps, you can pass exam simply.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q195-Q200):

NEW QUESTION # 195
Which logging level includes the following information by default?
1. Execution Started log entry - generated every time a process is started.
2. Execution Ended log entry - generated every time a process is finalized.
3. Transaction Started log entry - generated every time a transaction item is obtained by the robot from Orchestrator.
4. Transaction Ended log entry - generated every time the robot sets the transaction status to either Success or Failed.
5. Activity Information log entry - generated every time an activity is started, faulted or finished inside a workflow.
6. Arguments and Variables Information log entry - show values of the variables and arguments that are used.

- A. Verbose
- B. Critical
- C. Information
- D. Trace

Answer: A

Explanation:
The Verbose logging level includes the following information by default:
* Execution Started log entry - generated every time a process is started.
* Execution Ended log entry - generated every time a process is finalized.
* Transaction Started log entry - generated every time a transaction item is obtained by the robot from Orchestrator.
* Transaction Ended log entry - generated every time the robot sets the transaction status to either Success or Failed.
* Activity Information log entry - generated every time an activity is started, faulted or finished inside a workflow.
* Arguments and Variables Information log entry - show values of the variables and arguments that are used.
The Verbose logging level is the most detailed one and it is useful for debugging purposes, as it provides a lot of information about the execution flow and the data used by the robot. However, it also generates a lot of log entries, which can affect the performance and the storage space of the robot and Orchestrator. References:
[Logging Levels]

NEW QUESTION # 196
Given the following list of arguments:

and the following code:

What is the value that will be displayed in the Output Panel at the end of the sequence below:

- A. 0

- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
The value that will be displayed in the Output Panel at the end of the sequence is 9. This is because the code in the Invoke Code activity is looping through the array in_numArray and setting the variable out_numVar to the highest value in the array. The array in_numArray has the values {1, 2, 7, 9, 4} as shown in the list of arguments. The variable out_numVar is initialized to 0. The For loop iterates from 0 to the upper bound of the array, which is 4. In each iteration, the If condition checks if the current element of the array is greater than the current value of out_numVar. If it is, then out_numVar is assigned to the current element of the array. Otherwise, out_numVar remains unchanged. Therefore, after the first iteration, out_numVar becomes 1. After the second iteration, out_numVar becomes 2. After the third iteration, out_numVar becomes 7. After the fourth iteration, out_numVar becomes 9. After the fifth iteration, out_numVar remains 9, since 4 is not greater than 9. The Write Line activity outputs the value of out_numVar to the console, which is
9. References: Invoke Code

NEW QUESTION # 197
Which activity Is specific tor Ul synchronization in UlPath Studio?

- A. Use Application/Browser
- B. Check App State
- C. Get Processes
- D. Process Start Trigger

Answer: B

Explanation:
The Check App State activity is specifically designed for UI synchronization. It checks the state of a UI element, ensuring that subsequent actions are performed when the UI element is in the desired state.

NEW QUESTION # 198
When developing a process, you were provided with two data tables, "DT1" and "DT2", as shown below:
The process documentation specifies that the two data tables need to be manipulated in order to reflect the following "DT2":
How should the properties of the Merge Data Table activity be configured?

- A.
- B.
- C.
- D.

Answer: D

Explanation:
Given the two data tables DT1 and DT2, to achieve the desired result where DT2 contains both the department and the names, the Merge Data Table activity should be configured to merge DT1 into DT2. This configuration requires specifying DT1 as the source table and DT2 as the destination table. The MissingSchemaAction should be set to AddWithKey which ensures that if the source table (DT1) contains columns that are not found in the destination table (DT2), they will be added to the destination table with the primary key information preserved.
Option A shows the correct configuration for the Merge Data Table activity to achieve this result:
Destination: DT1
Source: DT2
MissingSchemaAction: AddWithKey
This setup correctly adds the "Name" column from DT1 to DT2 based on the shared "ID" column, which acts as the key. Since both tables have an "ID" column with matching values, the names will be added to the corresponding IDs in DT2, resulting in a merged table with ID, Department, and Name columns.

NEW QUESTION # 199

A developer is working on an automation using the REFramework. Each transaction item represents a piece of client information. For each customer, the automated procedure must click the "Generate Shipment Details" button. This generates a table of shipment records for each customer.

What type of exception occurs when the data is not accessible, the created table displays only the header row, and processing for that client must be halted?

- A. BusinessRuleException
- B. SystemException
- C. NullReferenceException
- D. ApplicationException

Answer: A

Explanation:

When the data is not accessible, the created table displays only the header row, and processing for that client must be halted, a BusinessRuleException occurs. A BusinessRuleException is a type of exception that indicates a business logic error or a validation error that cannot be resolved by retrying the transaction. For example, if the input data is incorrect, incomplete, or outdated, a BusinessRuleException should be thrown. A BusinessRuleException can be thrown by using the Throw activity with the following expression:

VB New BusinessRuleException("Message") where Message is a string that describes the error. A BusinessRuleException can be caught by using the Catch activity with the following expression:

VB ex As BusinessRuleException where ex is a variable that stores the exception object. A BusinessRuleException can be handled differently from other types of exceptions, such as SystemException or ApplicationException, depending on the logic of the automation. For example, in the REFramework, a BusinessRuleException sets the status of the transaction item to Failed and does not retry the transaction, whereas a SystemException sets the status of the transaction item to Retry and retries the transaction up to a specified number of times. References: [BusinessRuleException], [Throw], [Catch], [REFramework]
