Pass4sure Data-Architect Exam Prep & Data-Architect Valid Exam Topics

In this way, you can achieve your career objectives. Before this, you have to pass the Salesforce Data-Architect exam which is not an easy task. The Data-Architect certification exam is a difficult and competitive exam that always gives a tough time to Data-Architect Exam holders. However, with the assistance of Data-Architect Questions, you can prepare well and later on pass the Salesforce Data-Architect exam easily.

Salesforce Certified Data Architect Sample Questions (Q115-Q120):

NEW QUESTION # 115

NTO has a loyalty program to reward repeat customers. The following conditions exists:

1. Reward levels are earned based on the amount spent during the previous 12 months.
2. The program will track every item a customer has bought and grant them points for discount.
3. The program generates 100 million records each month.

NTO customer support would like to see a summary of a customer's recent transaction and reward level(s) they have attained. Which solution should the data architect use to provide the information within the salesforce for the customer support agents?

- **A. Create a custom big object to capture the reward program data and display it on the contact record and update nightly from the point-of-scale system.**
- B. Provide a button so that the agent can quickly open the point of sales system displaying the customer history.
- C. Capture the reward program data in an external data store and present the 12 months trailing summary in salesforce using salesforce connect and then external object.
- D. Create a custom object in salesforce to capture and store all reward program. Populate nightly from the point-of-scale system, and present on the customer record.

Answer: A

Explanation:

According to the Get Started with Big Objects unit on Trailhead, one of the use cases for custom big objects is to store and manage loyalty program data for customers. The unit states that "From loyalty programs to transactions, order, and billing information, use a custom big object to keep track of every detail." Therefore, a custom big object can be used to capture the reward program data and display it on the contact record. Additionally, according to the Big Objects Implementation Guide, big objects can handle massive amounts of data (up to billions of records) and can be updated nightly from external systems using Bulk API or batch Apex. Therefore, a custom big object can meet the requirements of NTO's loyalty program scenario.

NEW QUESTION # 116

DreamHouse Realty has a legacy system that captures Branch Offices and Transactions. DreamHouse Realty has 15 Branch Offices. Transactions can relate to any Branch Office. DreamHouse Realty has created hundreds of thousands of Transactions per year.

A Data Architect needs to denormalize this data model into a single Transaction object with a Branch Office picklist.

What are two important considerations for the Data Architect in this scenario? (Choose two.)

- A. Standard list view in-line editing.
- **B. Limitations on Org data storage.**
- C. Limitations on master-detail relationships.
- **D. Bulk API limitations on picklist fields.**

Answer: B,D

Explanation:

The Data Architect should consider the limitations on Org data storage and the Bulk API limitations on picklist fields when denormalizing the data model into a single Transaction object with a Branch Office picklist. The Org data storage limit is the total amount of data that can be stored in a Salesforce Org, and it depends on the edition and license type of the Org1. The Bulk API limit on picklist fields is the maximum number of values that can be imported or exported using the Bulk API, and it is 1,000 values per picklist field2. These limitations could affect the performance and scalability of the data model, and the Data Architect should plan accordingly.

NEW QUESTION # 117

Universal Containers (UC) has 50 million customers and stores customer order history on an ERP system. UC also uses Salesforce to manage opportunities and customer support.

In order to provide seamless customer support, UC would like to see the customer's order history when viewing the customer record during a sales or support call.

What should a data architect do in order to provide this functionality, while preserving the user experience?

- A. Import the order history into a custom Salesforce object, update nightly
- **B. Use Salesforce Connect and an external object to display the order history in Salesforce**
- C. Use an Apex callout to populate a text area field for displaying the order history.
- D. Embed the ERP system in an iframe and display on a custom tab.

Answer: B

NEW QUESTION # 118

An architect is planning on having different batches to load one million Opportunities into Salesforce using the Bulk API in parallel mode. What should be considered when loading the Opportunity records?

- A. Sort batches by Name field values.
- **B. Order batches by Auto -number field.**
- C. Group batches by the AccountId field.
- D. Create indexes on Opportunity object text fields.

Answer: B

NEW QUESTION # 119

Every year, Ursa Major Solar has more than 1 million orders. Each order contains an average of 10 line items. The Chief Executive Officer (CEO) needs the Sales Reps to see how much money each customer generates year-over-year. However, data storage is running low in Salesforce.

Which approach for data archiving is appropriate for this scenario?

- **A. 1. Annually aggregate order amount data to store in a custom object. 2. Delete those orders and order line items.**
- B. 1. Annually export and delete orders and order line items. 2. Store them in a zip file in case the data is needed later.
- C. 1. Annually export and delete order line items. 2. Store them in a zip file in case the data is needed later.
- D. 1. Annually delete orders and order line items. 2. Ensure the customer has order information in another system.

Answer: A

Explanation:

Option B is the most appropriate approach for data archiving in this scenario. By aggregating order amount data at a summary level and storing it in a custom object, you can reduce data storage and still provide visibility to the Sales Reps on how much money each customer generates year-over-year. Option A is not correct because storing data in a zip file does not make it available in Salesforce. Option C is not correct because exporting and deleting orders and order line items may lose important details that are needed for analysis or reporting. Option D is not correct because deleting orders and order line items without exporting them may cause data loss or inconsistency if the customer does not have order information in another system.

NEW QUESTION # 120

.....

We provide online customer service to the customers for 24 hours per day and we provide professional personnel to assist the client in the long distance online. If you have any questions and doubts about the Salesforce Certified Data Architect guide torrent we provide before or after the sale, you can contact us and we will send the customer service and the professional personnel to help you solve your issue about using Data-Architect Exam Materials.
