2026 Latest PracticeVCE HPE7-A07 PDF Dumps and HPE7-A07 Exam Engine Free Share: <https://drive.google.com/open?id=1y4NdGNTocIX7h3f09INfZ4qmh3JKA4V0>

Obtaining the HPE7-A07 certificate will make your colleagues and supervisors stand out for you, because it represents HPE7-A07 your professional skills. At the same time, it will also give you more opportunities for promotion and job-hopping. The HPE7-A07 latest exam dumps have different classifications for different qualification examinations, which can enable students to choose their own learning mode for themselves according to the actual needs of users. The HPE7-A07 Exam Question offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation.

We are dedicated to help you pass the exam and gain the corresponding certificate successful. HPE7-A07 exam cram is high-quality, and you can pass your exam by using them. In addition, HPE7-A07 exam braindumps cover most of knowledge points for the exam, and you can also improve your ability in the process of learning. You can obtain the download link and password within ten minutes, so that you can begin your learning right away. We have free update for 365 days if you buying HPE7-A07 Exam Materials, the update version for HPE7-A07 exam cram will be sent to your email automatically.

**Latest HPE7-A07 Practice Questions | HPE7-A07 Valid Study Materials**

We offer free demos as your experimental tryout before downloading our real HPE7-A07 actual exam. And as the HPE7-A07 exam braindumps have three versions: the PDF, Software and APP online. Accordingly we have three kinds of the free demos for you to download. For more textual content about practicing exam questions, you can download our HPE7-A07 Training Materials with reasonable prices and get your practice begin within 5 minutes.

## HP Aruba Certified Campus Access Mobility Expert Written Exam Sample Questions (Q70-Q75):

### NEW QUESTION # 70

You recently added HPE Aruba Networking ClearPass as an authentication server to a group in HPE Aruba Networking Central. RADIUS authentication with Local User Roles (LUR) works fine, but the same access points cannot use Downloadable User Roles (DUR).

What should be corrected in this configuration to fix the issue with DUR?

- A. Modify the shared secret on the switch to match CPPM using the "radius-server host" command
- B. Add a new Enforcement Policy of type "WEBAUTH" on ClearPass and associate it with the matching service on ClearPass
- C. Uncheck the "Dynamic Authorization" checkbox in the authentication server configuration on HPE Aruba Networking Central
- D. Add the correct values for "CPPM Username" and "CPPM Password" in the authentication server configuration on HPE Aruba Networking Central

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of HPE Aruba Networking Switching:

When using Downloadable User Roles (DUR) with HPE Aruba Networking ClearPass, the Aruba device (AP, gateway, or switch) must authenticate to ClearPass to retrieve and install the user role that ClearPass sends dynamically. This process differs from normal RADIUS authentication, where only the user credentials are verified.

In Aruba Central, when you configure an authentication server (ClearPass) and enable Downloadable Roles

, the system requires CPPM Username and CPPM Password fields. These credentials are specifically used by the Aruba device to establish a secure HTTPS (TLS) session to the ClearPass server for DUR retrieval.

If the CPPM Username or CPPM Password values are missing, incorrect, or not synchronized with the corresponding credentials defined on ClearPass, the device will fail to authenticate to ClearPass for DUR retrieval. This results in RADIUS authentication succeeding (because LUR is still functioning), but the DUR cannot be downloaded.

Exact Extract from HPE Aruba Networking Switching and ClearPass Configuration Guides:

"When Downloadable User Roles are enabled, the Aruba device must authenticate with ClearPass using configured credentials. The device uses the CPPM Username and Password for HTTPS-based role retrieval. If the credentials are not defined or are invalid, role download will fail even if RADIUS authentication succeeds."

"The CPPM Username and Password define the credentials the device uses to connect to ClearPass for downloadable role retrieval. These credentials must match the admin or API credentials configured on the ClearPass Policy Manager server." This explains why Local User Roles (LUR) work (standard RADIUS), but Downloadable User Roles (DUR) do not - the HTTPS/TLS authentication for DUR fails because the required credentials were not configured correctly.

Why the Other Options Are Incorrect:

\* A. Add a new Enforcement Policy of type "WEBAUTH" on ClearPass: WebAuth enforcement policies are unrelated to DUR. Downloadable User Roles are delivered using an Aruba Downloadable Role enforcement profile, not WebAuth.

"Downloadable roles are defined and enforced through the Aruba Downloadable Role profile type. WebAuth policies are used for captive portal authentication only."

\* C. Uncheck the "Dynamic Authorization" checkbox: Dynamic Authorization (RFC 3576 or CoA) allows session reauthentication or role changes. Disabling this feature would not fix DUR, as DUR relies on CPPM credentials for HTTPS authentication.

"Dynamic Authorization (CoA) enables session updates but does not control role download authentication."

\* D. Modify the shared secret on the switch using the 'radius-server host' command: This option applies to switch RADIUS configuration, not Aruba Central APs or gateways. The DUR process uses HTTPS with ClearPass credentials, not the RADIUS shared secret.

"The RADIUS shared secret is used for authentication requests, not for downloadable role retrieval.

Downloadable roles require valid CPPM credentials."

References of HPE Aruba Networking Switching Documents or Study Guide:

\* Aruba Central Management and Configuration Guide - Downloadable Roles Section (Explains CPPM Username/Password requirement and DUR HTTPS authentication process.)

\* Aruba ClearPass Policy Manager Configuration Guide - Aruba Downloadable Role Enforcement Profiles (Details the role download process and ClearPass credential validation.)

\* ArubaOS-Switch and AOS-CX Security Configuration Guide - Role-Based Access Control and ClearPass Integration(Describes the mechanism for DUR retrieval and the use of HTTPS between the Aruba device and ClearPass.)

#### NEW QUESTION # 71

Refer to the CLI output below:

□ What statement about the output above is correct?

- A. The port-access role was configured with gateway-role visitor
- **B. The secondary tunnel endpoint IP is 10.10-10.151.**
- C. The client authenticated using dot1x.
- D. The UBT zone was configured to use a user-defined VRF

**Answer: B**

Explanation:

The CLI output indicates a tunnel creation process, where "SW hw tun created" refers to the switch hardware tunnel being created. The line mentioning "BYP-10.10.10.101 -> SW hw tun created to 10.10.10.151 tunnel 15." implies that a tunnel was established to the secondary tunnel endpoint with the IP address 10.10.10.151. This is a common configuration for User-Based Tunneling (UBT) setups where traffic is tunneled to a specific endpoint.

#### NEW QUESTION # 72

Which option shows the correct Bandwidth Control for 1024 kbps down and 2048 Kbps up for the SSID?

- A. □
- **B. □**
- C. □
- D. □

**Answer: B**

Explanation:

The correct Bandwidth Control settings for 1024 Kbps down and 2048 Kbps up for the SSID are shown in Option D. In Option D, the downstream is set at 1024 Kbps and the upstream at 2048 Kbps, both configured per user, which matches the requested configuration. This setup ensures that each user has a guaranteed bandwidth allocation of the specified rates when connected to the SSID, providing a controlled and predictable user experience.

#### NEW QUESTION # 73

Which statement is true given the following CLI output from a CX 6300?

□

- A. Duplicate MAC addresses were detected in the overlay fabric
- B. There are three active client overlay VLANs in the overlay fabric
- **C. The underlay loopback addresses are in the 172.21.11.x range.**
- D. There are two anycast addresses in the overlay fabric.

**Answer: C**

Explanation:

The CLI output displays EVPN routes and their corresponding next hops. The "Route Distinguisher" entries followed by IP addresses in the 172.21.11.x range indicate these are loopback addresses used by the underlay network. The underlay network provides the basic routing and forwarding plane for the overlay network that EVPN is part of. These loopback addresses are crucial for the proper functioning of the EVPN control plane.

#### NEW QUESTION # 74

An ACME company employee complained about a recent poor-quality VoIP call while moving around their office environment. HPE Aruba Networking Central reported a fair UCC score for this call while your VoIP engineer reported that their systems reported a MOS of 2.3. The VoIP devices are operating over the 5GHz frequency band.

What are the possible contributing factors? (Select two.)

- A. There was localized interference at the caller's location
- **B. The client roamed into an area that continuously operates Zigbee.**
- C. 802.11r is enabled in the WLAN Security settings.
- D. 802.11K is disabled in the WLAN Security settings
- **E. Coverage AP deployment plans generally don't support enough cell overlap for VoIP.**

**Answer: B,E**

Explanation:

VoIP quality can be negatively impacted by insufficient cell overlap in AP deployment plans, which can cause poor handoffs between APs as a user moves around. This results in a degraded VoIP experience. Additionally, roaming into an area with continuous Zigbee operation can cause interference with the 5GHz frequency band, further contributing to poor VoIP call quality. The Zigbee communication protocol operates on the same frequency band as Wi-Fi and can introduce noise and interference, which leads to a reduced MOS score, as reported by the VoIP engineer.

## NEW QUESTION # 75

.....

Thousands of Aruba Certified Campus Access Mobility Expert Written Exam HPE7-A07 exam candidates have passed their exam and you should also try HP HPE7-A07 Exam Questions. Aruba Certified Campus Access Mobility Expert Written Exam HPE7-A07 Exam and start preparation with PracticeVCE HPE7-A07 and pass it with good scores.

**Latest HPE7-A07 Practice Questions:** <https://www.practicevce.com/HP/HPE7-A07-practice-exam-dumps.html>

Every year more than 6300 users choose us as their guide while preparing for HP Latest HPE7-A07 Practice Questions exams and most of them get passing score, But it does not matter, because I purchased PracticeVCE's HP HPE7-A07 exam training materials, Every candidate needs to prepare with actual HPE7-A07 Questions to save time and money, In other words, your investments with PracticeVCE Latest HPE7-A07 Practice Questions Links to an external site.

Trap Objects to Images, In these pages, eBay aficionados Jim HPE7-A07 Heid and Toby Malina have teamed with the folks at TechTV to create the first and last word on selling at eBay.
