Microsoft SC-200, also known as the Microsoft Security Operations Analyst exam, is a certification exam offered by Microsoft. SC-200 exam is designed for individuals who are interested in pursuing a career in the field of cybersecurity and want to validate their skills and knowledge in security operations. SC-200 exam is aimed at professionals who work in security operations centers and are responsible for monitoring and responding to security threats.

To become certified in Microsoft SC-200, candidates must possess a strong understanding of Microsoft security technologies, including Azure Sentinel, Microsoft Defender for Endpoint, and Microsoft Cloud App Security. SC-200 Exam includes a mix of multiple-choice questions, case studies, and hands-on tasks that test the candidate's ability to identify and respond to various security incidents. Successful candidates will need to demonstrate their ability to triage incidents, investigate potential security breaches, and identify and implement appropriate remediation measures. Overall, the Microsoft SC-200 certification is a valuable credential for security analysts who want to advance their careers and demonstrate their expertise in Microsoft security technologies.

NEW QUESTION # 288

You have 50 on-premises servers.

You have an Azure subscription that uses Microsoft Defender for Cloud. The Defender for Cloud deployment has Microsoft Defender for Servers and automatic provisioning enabled.

You need to configure Defender for Cloud to support the on-premises servers. The solution must meet the following requirements:

- * Provide threat and vulnerability management.

- * Support data collection rules.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

To configure Defender for Cloud to support the on-premises servers, you should perform the following three actions in sequence:

- * On the on-premises servers, install the Azure Connected Machine agent.

- * On the on-premises servers, install the Log Analytics agent.

- * From the Data controller settings in the Azure portal, create an Azure Arc data controller.

Once these steps are completed, the on-premises servers will be able to communicate with the Azure Defender for Cloud deployment and will be able to support threat and vulnerability management as well as data collection rules. Reference:
