JN0-253 Guide Torrent - JN0-253 Demo Test

You will get your hands on the international JN0-253 certificate you want. Perhaps you can ask the people around you that JN0-253 study engine have really helped many people pass the exam. Of course, you can also experience it yourself. Next, allow me to introduce our JN0-253 Training Materials. First, our JN0-253 practice materials have varied versions as the PDF, software and APP online which can satisfy different needs of our customers. Secondly, the price is quite favourable.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q99-Q104):

NEW QUESTION # 99

What are two user roles that you are allowed to assign to a new account? (Choose two.)

- **A. network admin**
- B. root
- C. guest
- **D. installer**

Answer: A,D

Explanation:

Installer: The installer role is designed for users who need access to configure and deploy Mist devices. This role typically has the necessary permissions to set up and manage devices but with limited access to other administrative functions.

Network Admin: The network admin role provides comprehensive access to manage network settings, monitor performance, and configure policies. This role is essential for users responsible for the overall network administration and maintenance.

NEW QUESTION # 100

Which two components make up a self-driving AI network? (Choose two.)

- A. human interface
- B. telemetry
- C. support tickets
- D. actions

Answer: B,D

Explanation:

A self-driving AI network is comprised of two foundational components: actions and telemetry. According to Juniper's own communications, "Marvis AI analyzes telemetry across the wired, wireless, WAN and data center domains, and creates automated workflows to simplify operations and lower costs. Agentic AI:

Accelerating self-driving operations." Telemetry provides real-time continuous data and metrics from the network, including client, device, and application health, enabling the AI engine to build a current, actionable state model. Actions refer to proactive, automated tasks performed by the AI, such as remediating misconfigured ports, resolving anomalies, optimizing performance, and self-healing operations-"Expanded Self-Driving Actions... the Marvis Actions dashboard now supports the autonomous remediation of more network issues." Human interface and support tickets are beneficial for management and support, but the core capabilities of a self-driving AI network are telemetry (data/observability) and actions (automation /remediation).

NEW QUESTION # 101

What are two requirements for a WebSocket call? (Choose two.)

- A. WebSocket configuration
- B. encryption token
- C. WebSocket connection URL
- D. authentication token

Answer: C,D

NEW QUESTION # 102

Which two statements are correct about the Juniper Mist vBLE Asset Visibility mode? (Choose two.)

- A. The vBLE antenna is in the transmit mode.
- B. The vBLE antenna communicates with mobile devices running the Juniper Mist location SDK.
- C. The vBLE antenna is in the receive mode.
- D. The vBLE antenna tracks chirps from BLE tags.

Answer: C,D

Explanation:

Juniper Mist's virtual Bluetooth Low Energy (vBLE) technology is designed to deliver precise indoor location services using cloud-managed access points equipped with integrated BLE antenna arrays. The system supports multiple operational modes, including Engagement Mode (for mobile app interactions) and Asset Visibility Mode (for BLE tag tracking).

According to the Juniper Mist Location Services Documentation, in Asset Visibility Mode, the vBLE antenna functions primarily in receive mode to detect and process signals emitted from BLE asset tags. These tags periodically transmit Bluetooth "chirps" that are received by multiple APs. Mist Cloud then uses angle-of-arrival (AoA) and RSSI triangulation algorithms to determine the exact location of the asset within the facility.

The documentation specifies:

"In Asset Visibility Mode, the vBLE antenna operates in receive mode and listens for BLE tag beacons (chirps). The system triangulates these signals to calculate the real-time location of tracked assets." Conversely, Engagement Mode is the configuration in which vBLE operates in transmit mode to interact with mobile devices running the Mist SDK - which corresponds to location-based engagement or proximity notifications.

Thus, the correct answers are:

- * A. The vBLE antenna is in the receive mode
- * B. The vBLE antenna tracks chirps from BLE tags

NEW QUESTION # 103

You want to troubleshoot a wireless client that is no longer connected to a Mist AP. Which area within the Mist GUI would you use?

- A. Clients -> WiFi Clients
- B. Clients -> App Clients
- C. Organization -> Audit Logs
- D. Monitor -> Service Levels -> Insights

Answer: A

Explanation:

To troubleshoot a wireless client that is no longer connected to a Mist AP, you would navigate to the "Clients" section within the Mist GUI and select "WiFi Clients." This area provides detailed information about all wireless clients that have connected to the Mist APs, including their connection history, performance metrics, and any issues encountered. By examining the data available in the WiFi Clients section, network administrators can identify the root cause of connectivity problems and take appropriate actions to resolve them.

NEW QUESTION # 104

.....

The third and last format is the Juniper JN0-253 desktop practice exam software form that can be used without an active internet connection. This software works offline on the Windows operating system. The practice exams benefit your preparation because you can attempt them multiple times to improve yourself for the Juniper JN0-253 Certification test. Our Mist AI, Associate (JNCIA-MistAI) (JN0-253) exam dumps are customizable, so you can set the time and questions according to your needs.
