Pass Guaranteed Quiz Professional C_SEC_2405 - SAP Certified Associate - Security Administrator New Dumps Pdf

Want to get a high-paying job? Hurry to get an international C_SEC_2405 certificate! You must prove to your boss that you

deserve his salary. You may think that it is not easy to obtain an international certificate. Don't worry! Our C_SEC_2405 Guide materials can really help you. And our C_SEC_2405 exam questions have helped so many customers to pass their exam and get according certifications. You can just look at the warm feedbacks to us on the website.

SAP C_SEC_2405 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.
Topic 2	<ul style="list-style-type: none"> Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
Topic 3	<ul style="list-style-type: none"> SAP Fiori Authorizations and SAP S 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.
Topic 4	<ul style="list-style-type: none"> User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
Topic 5	<ul style="list-style-type: none"> Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.

SAP Certified Associate - Security Administrator Sample Questions (Q55-Q60):

NEW QUESTION # 55

After you maintained authorization object S_TABU_DIS and ACTVT field value 02 as authorization defaults for transaction SM30 in your development system, what would be the correct option for transporting only these changes to your quality assurance system?

- A. Save tables USOBT_C and USOBX_C to a transport request and transport using the Transport Management System.
- B. Save your changes and use the transport interface in SU25 to transport the changes using the Transport Management System.
- C. Save your changes to a Customizing transport request and transport using the Transport Management System.
- D. Save your changes to a Workbench transport request and transport using the Transport Management System.

Answer: D

Explanation:

To transport changes to the authorization object S_TABU_DIS with ACTVT field value 02 for transaction SM30 from the development system to the quality assurance system, the correct approach is to save the changes to a Workbench transport request and transport them using the Transport Management System (TMS). These changes, maintained in transaction SU24, affect authorization defaults stored in tables like USOBT_C and USOBX_C, which are classified as Workbench objects because they involve system-wide configuration rather than client-specific settings. A Workbench transport request is used for cross-client objects, ensuring that the authorization defaults are consistently applied in the target system. SU25's transport interface (option A) is for initial setup or upgrades, not specific authorization changes. A Customizing transport request (option C) is for client-specific settings, not applicable here. Saving tables directly (option D) is unnecessary, as SU24 handles the transport. This method ensures secure and efficient propagation of authorization changes across SAP systems.

NEW QUESTION # 56

You are building a PFCG role for access to an SAP Fiori app on your SAP S/4HANA on-premise system.

After you enter the catalog in the role menu, an entry for an OData service is missing and you have to add it manually to the role menu. When you maintain authorization data in the PFCG role, why does SAP recommend that you NOT maintain the SRV_NAME field value of the S_SERVICE authorization object manually?

- A. Because the TADIR Service name is the same for the front-end server component and the back-end server component.
- **B. Because the SRV_NAME hash value for the front-end server component and back-end server component are different.**
- C. Because the SRV_NAME hash value for the front-end server component and back-end server component are the same.
- D. Because the TADIR Service name for the back-end server component was automatically added to the role menu.

Answer: B

Explanation:

* Context: When building SAP Fiori access roles, the SRV_NAME field in the S_SERVICE authorization object represents unique OData services. Manually maintaining this field could lead to inconsistencies.

* Solution Explanation:

* The SRV_NAME hash values for front-end and back-end server components differ. Manual maintenance risks misalignment and access issues.

NEW QUESTION # 57

In the SAP BTP Cockpit, at which level is Trust Configuration available? Note: There are 2 correct answers to this question.

- **A. Subaccount**
- B. Organization
- **C. Global Account**
- D. Directory

Answer: A,C

NEW QUESTION # 58

When planning an authorization concept for your SAP S/4HANA Cloud Public Edition implementation, what rules must you consider? Note: There are 2 correct answers to this question.

- **A. Business catalogs can be assigned directly to a business role.**
- B. Business catalogs can be assigned directly to a business user.
- **C. Business roles can be assigned directly to a business user.**
- D. SAP Fiori apps, dashboards, and displays can be assigned directly to a business role.

Answer: A,C

Explanation:

* Context: SAP S/4HANA Cloud Public Edition requires careful planning of the authorization concept to ensure proper access control.

* Solution Explanation:

* C: Business roles serve as containers for catalogs and can be assigned directly to users.

* D: Business catalogs are assigned to business roles, defining the scope of access.

SAP Security References:

* SAP Fiori Role and Catalog Management Guide

* SAP Help Portal for Business Role Management

NEW QUESTION # 59

When segregating the duties for user and role maintenance, which of the following should be part of a decentralized treble control strategy for a production system? Note: There are 3 correct answers to this question.
