At QuestionsTube, you can read ARA-C01 free demo questions in pdf file, so you can check the questions and answers before deciding to download the Snowflake ARA-C01 practice questions. These free demo questions are parts of the ARA-C01 exam questions. Download and read them carefully, you will find that the ARA-C01 test questions of QuestionsTube will be your great learning materials online. Share some ARA-C01 exam online questions below.

1. An Architect needs to allow a user to create a database from an inbound share.

2026 Latest TrainingDump ARA-C01 PDF Dumps and ARA-C01 Exam Engine Free Share: https://drive.google.com/open?id=1GxV6bvwI-5vfyjGmxKc_8kGbnrwKwO_

You must be attracted by the APP online version of our ARA-C01 exam questions, which is unlike other exam materials that are available on the market, study torrent specially proposed different version to allow you to learn not on paper, but to use on all kinds of electronic devices such as IPAD, mobile phones or laptop to learn. This greatly improves the students' availability of fragmented time. You can also have a quite enjoyable experience with APP online version of our ARA-C01 Study Materials. Just have a try on this version of our ARA-C01 learning guide!

On the one hand, ARA-C01 test torrent is revised and updated according to the changes in the syllabus and the latest developments in theory and practice. On the other hand, a simple, easy-to-understand language of ARA-C01 test answers frees any learner from any learning difficulties - whether you are a student or a staff member. These two characteristics determine that almost all of the candidates who use ARA-C01 Guide Torrent can pass the test at one time. This is not self-determination. According to statistics, by far, our ARA-C01 guide torrent has achieved a high pass rate of 98% to 99%, which exceeds all others to a considerable extent. At the same time, there are specialized staffs to check whether the ARA-C01 test torrent is updated every day.

High Pass-Rate - How to Prepare for Snowflake ARA-C01 Efficiently and

Easily

Different from traditional learning methods, our ARA-C01 exam products adopt the latest technology to improve your learning experience. We hope that all candidates can try our free demo before deciding to buy our ARA-C01 study guide. The Q&A contained in the free demo are also compiled by our veteran professionals who keep close on the changes of the ARA-C01 learning dumps according to the real exam. Come and have a try, you will get satisfied with our ARA-C01 training engine!

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q159-Q164):

NEW QUESTION # 159

The following DDL command was used to create a task based on a stream:

```
CREATE TASK ts_insert_new_customers
  WAREHOUSE = MY_WH
  Schedule = '5 minute'
WHEN
  System$STREAM_HAS_DATA('MYSTREAM')
AS
  INSERT INTO new_customers(id, name) SELECT id, name
  FROM mystream WHERE METADATA$ACTION = 'INSERT';
```

Assuming MY_WH is set to auto_suspend - 60 and used exclusively for this task, which statement is true?

- A. The warehouse MY_WH will be made active every five minutes to check the stream.
- **B. The warehouse MY_WH will only be active when there are results in the stream.**
- C. The warehouse MY_WH will automatically resize to accommodate the size of the stream.
- D. The warehouse MY_WH will never suspend.

Answer: B

Explanation:

The warehouse MY_WH will only be active when there are results in the stream. This is because the task is created based on a stream, which means that the task will only be executed when there are new data in the stream. Additionally, the warehouse is set to auto_suspend - 60, which means that the warehouse will automatically suspend after 60 seconds of inactivity. Therefore, the warehouse will only be active when there are results in the stream. References:

NEW QUESTION # 160

Following objects can be cloned in snowflake

- **A. External tables**
- B. Internal stages
- **C. Transient table**
- D. Temporary table
- **E. Permanent table**

Answer: A,C,E

Explanation:

Explanation

* Snowflake supports cloning of various objects, such as databases, schemas, tables, stages, file formats, sequences, streams, tasks, and roles. Cloning creates a copy of an existing object in the system without copying the data or metadata. Cloning is also known as zero-copy cloning1.

* Among the objects listed in the question, the following ones can be cloned in Snowflake:

* Permanent table: A permanent table is a type of table that has a Fail-safe period and a Time Travel retention period of up to 90 days. A permanent table can be cloned using the CREATE TABLE ...

CLONE command². Therefore, option A is correct.

* Transient table: A transient table is a type of table that does not have a Fail-safe period and can have a Time Travel retention period of either 0 or 1 day. A transient table can also be cloned using the CREATE TABLE ... CLONE command². Therefore, option B is correct.

* External table: An external table is a type of table that references data files stored in an external location, such as Amazon S3, Google Cloud Storage, or Microsoft Azure Blob Storage. An external table can be cloned using the CREATE EXTERNAL TABLE ... CLONE command³.

Therefore, option D is correct.

* The following objects listed in the question cannot be cloned in Snowflake:

* Temporary table: A temporary table is a type of table that is automatically dropped when the session ends or the current user logs out. Temporary tables do not support cloning⁴. Therefore, option C is incorrect.

* Internal stage: An internal stage is a type of stage that is managed by Snowflake and stores files in Snowflake's internal cloud storage. Internal stages do not support cloning⁵. Therefore, option E is incorrect.

CLONE : Temporary Tables : Internal Stages

NEW QUESTION # 161

A company stores customer data in Snowflake and must protect Personally Identifiable Information (PII) to meet strict regulatory requirements.

What should an Architect do?

- A. Create secure views for PII data and grant access as needed.
- B. Use row-level security to mask PII data.
- C. Separate PII into different tables and grant access as needed.
- **D. Use tag-based masking policies for columns containing PII.**

Answer: D

Explanation:

Tag-based masking policies provide a scalable and centralized way to protect PII across many tables and schemas (Answer B). By tagging columns that contain PII and associating masking policies with those tags, Snowflake automatically enforces masking rules wherever the tagged columns appear. This approach reduces administrative overhead and ensures consistent enforcement as schemas evolve.

Row access policies control row visibility, not column masking. Secure views and table separation can protect data but introduce significant maintenance complexity and do not scale well across large environments.

Snowflake best practices-and the SnowPro Architect exam-emphasize tag-based governance for sensitive data.

NEW QUESTION # 162

When activating Tri-Secret Secure in a hierarchical encryption model in a Snowflake account, at what level is the customer-managed key used?

- A. At the micro-partition level

- B. At the account level (AMK)
- C. At the table level (TMK)
- D. At the root level (HSM)

Answer: B

Explanation:

Tri-Secret Secure is a feature that allows customers to use their own key, called the customer-managed key (CMK), in addition to the Snowflake-managed key, to create a composite master key that encrypts the data in Snowflake. The composite master key is also known as the account master key (AMK), as it is unique for each account and encrypts the table master keys (TMKs) that encrypt the file keys that encrypt the data files. The customer-managed key is used at the account level, not at the root level, the table level, or the micro-partition level. The root level is protected by a hardware security module (HSM), the table level is protected by the TMKs, and the micro-partition level is protected by the file keys¹². Reference:

NEW QUESTION # 163

How is the change of local time due to daylight savings time handled in Snowflake tasks? (Choose two.)

- A. Task schedules can be designed to follow specified or local time zones to accommodate the time changes.
- B. A frequent task execution schedule like minutes may not cause a problem, but will affect the task history.
- C. A task scheduled in a UTC-based schedule will have no issues with the time changes.
- D. A task will move to a suspended state during the daylight savings time change.
- E. A task schedule will follow only the specified time and will fail to handle lost or duplicated hours.

Answer: A,C

Explanation:

According to the Snowflake documentation¹ and the web search results², these two statements are true about how the change of local time due to daylight savings time is handled in Snowflake tasks. A task is a feature that allows scheduling and executing SQL statements or stored procedures in Snowflake. A task can be scheduled using a cron expression that specifies the frequency and time zone of the task execution.

* A task scheduled in a UTC-based schedule will have no issues with the time changes. UTC is a universal time standard that does not observe daylight savings time. Therefore, a task that uses UTC as the time zone will run at the same time throughout the year, regardless of the local time changes¹.

* Task schedules can be designed to follow specified or local time zones to accommodate the time changes. Snowflake supports using any valid IANA time zone identifier in the cron expression for a task. This allows the task to run according to the local time of the specified time zone, which may include daylight savings time adjustments. For example, a task that uses Europe/London as the time zone will run one hour earlier or later when the local time switches between GMT and BST¹².

Snowflake Documentation: Scheduling Tasks

Snowflake Community: Do the timezones used in scheduling tasks in Snowflake adhere to daylight savings?

NEW QUESTION # 164

.....

Our ARA-C01 exam questions have the merits of intelligent application and high-effectiveness to help our clients study more leisurely. If you prepare with our ARA-C01 actual exam for 20 to 30 hours, the ARA-C01 exam will become a piece of cake in front of you. Not only you will find that to study for the exam is easy, but also the most important is that you will get the most accurate information that you need to pass the ARA-C01 Exam.

New ARA-C01 Test Labs: <https://www.trainingdump.com/Snowflake/ARA-C01-practice-exam-dumps.html>

The numerous feedbacks from our clients praised and tested our strength on this career, thus our ARA-C01 practice materials get the epithet of high quality and accuracy, Professional research data is our online service and it contains simulation training examination and practice questions and answers about Snowflake certification ARA-C01 exam, The ARA-C01 signifies that you speak and understand the Managers language when management projects, and connects you to a community of professionals, organizations and experts worldwide.

In case you are wondering, the Smart Glass controls cannot ARA-C01 currently be used for playing games, and Eventually, you can

make programs just like Microsoft Word, The numerous feedbacks from our clients praised and tested our strength on this career, thus our ARA-C01 practice materials get the epithet of high quality and accuracy.
