

# 1Z0-1111-25 Prüfungs & 1Z0-1111-25 Unterlage

Wollen Sie den Plan machen, dass Sie Oracle 1Z0-1111-25 Zertifizierungsprüfung ablegen, um Ihre Fähigkeit zu entwickeln. Wenn Sie Oracle 1Z0-1111-25 Prüfung ablegen, ob Sie die geeigneten Lernhilfe finden? Und welche Unterlage sind wertvoll? Haben Sie Oracle 1Z0-1111-25 Dumps gewählt? Wenn ja, sorgen Sie sich bitte nicht um den Misserfolg.

## Oracle 1Z0-1111-25 Prüfungsplan:

| Thema   | Einzelheiten                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Thema 1 | <ul style="list-style-type: none"><li>Centrally Manage and Visualize Log Data: This section assesses the abilities of Logging Analysts and Security Engineers in managing logs across an entire IT environment. It includes enabling log collection, creating connectors for log transitions, identifying log patterns, and visualizing logs for advanced analytics using OCI Logging Service.</li></ul>                                                                 |
| Thema 2 | <ul style="list-style-type: none"><li>Monitor Applications with Deep Visibility into End-User Experience: This domain tests the knowledge of Application Performance Engineers and DevOps Specialists in using OCI Application Performance Monitoring (APM). It includes instrumenting applications for data collection, analyzing performance metrics, visualizing distributed application components, and diagnosing issues across multi-tier architectures.</li></ul> |
| Thema 3 | <ul style="list-style-type: none"><li>Monitor Distributed Components of an Application Stack: This section measures the skills of Stack Monitoring Specialists and Cloud Administrators in using OCI Stack Monitoring. It covers discovering resources within application stacks, monitoring metrics across distributed components, and ensuring optimal performance through effective resource management.</li></ul>                                                    |
| Thema 4 | <ul style="list-style-type: none"><li>Define the Pillars of Observability: This section of the exam measures the skills of Cloud Architects and Site Reliability Engineers (SREs) in understanding the three pillars of observability: logs, metrics, and traces. It explains how these components provide insights into system health and performance, enabling effective monitoring and troubleshooting in distributed cloud environments.</li></ul>                   |
| Thema 5 | <ul style="list-style-type: none"><li>Summarize OCI Observability and Management Services: This section evaluates the expertise of DevOps Engineers and IT Operations Managers in utilizing Oracle Cloud Infrastructure (OCI) Observability and Management services. It covers tools for monitoring, auditing, and managing cloud resources, emphasizing automation and machine learning-driven insights to optimize IT operations.</li></ul>                            |

## 1Z0-1111-25 Unterlage, 1Z0-1111-25 Zertifizierung

Die Schulungsunterlagen zur Oracle 1Z0-1111-25 Zertifizierungsprüfung von unserem PrüfungFrage können Ihre Kenntnisse während der Vorbereitungszeit prüfen und auch Ihre Leistungen innerhalb bestimmten Zeit bewerten. Unsere Schulungsunterlagen zur Oracle 1Z0-1111-25 Zertifizierungsprüfung sind das Ergebnis der langjährigen ständigen Untersuchung und Erforschung von den erfahrenen IT-Experten aus PrüfungFrage. Ihre Autorität ist über jeden Zweifel erhaben. Wenn Sie noch Befürchtungen haben, können Sie die kostenlose Demo herunterladen, dann entscheiden Sie sich, ob Sie PrüfungFrage wählen.

### Oracle Cloud Infrastructure 2025 Observability Professional 1Z0-1111-25 Prüfungsfragen mit Lösungen (Q22-Q27):

#### 22. Frage

What are the TWO benefits of Observability Lakehouse in Operations Insights? (Choose two.)

- A. Allows Oracle Enterprise Manager's operations data for various use-cases
- B. Provides data based on a statistical analysis of AI data
- C. Enables custom analytics such as trending, forecasting, capacity planning, workload characterizations
- D. Identifies future resource usage Oracle Cloud

**Antwort: A,C**

Begründung:

The Observability Lakehouse in Operations Insights is a data repository for operational analytics:

Enables custom analytics (B): Supports trending (e.g., usage patterns), forecasting (e.g., resource needs), capacity planning, and workload profiling using advanced analytical tools, enhancing resource optimization.

Allows Oracle Enterprise Manager's data (D): Integrates operational data from Enterprise Manager (e.g., database metrics) for use cases like performance analysis and anomaly detection.

Why not A or C?

Statistical analysis of AI data (A): Too vague; Lakehouse focuses on operational data, not AI-specific stats.

Identifies future resource usage (C): Partial benefit of B, but not a standalone feature.

These capabilities improve operational decision-making.

#### 23. Frage

From the following, select the different metric namespaces used for APM.

- A. RUM metrics, oracle\_apm\_monitoring, Oracle\_apm\_synthetic
- B. oracle\_apm\_rum, oracle\_apm\_synthetics, and oracle\_apm\_monitoring
- C. AjaxDownloadTime, TotalTraceCount, Oracle\_pm\_rum
- D. oracle\_apm\_monitoring namespace, synthetics, and monitoring

**Antwort: B**

Begründung:

APM uses specific metric namespaces to categorize its telemetry data:

oracle\_apm\_rum, oracle\_apm\_synthetics, and oracle\_apm\_monitoring (D):

oracle\_apm\_rum: Metrics from Real User Monitoring (e.g., page load times).

oracle\_apm\_synthetics: Metrics from Synthetic Monitoring (e.g., test response times).

oracle\_apm\_monitoring: Metrics from distributed tracing (e.g., span counts).

These namespaces align with APM's three core features.

Why not A, B, or C?

A: Individual metric names, not namespaces.

B: Incomplete and incorrect namespace naming.

C: Mixes metric types with partial namespace names.

These namespaces enable targeted metric queries in OCI Monitoring.

#### 24. Frage

You are part of a team that manages a set of workload instances running in an on-premises environment. The Architect team is tasked with designing and configuring Oracle Cloud Infrastructure (OCI) Logging service to collect logs from these instances. There

is a requirement to archive Info-level logging data of these instances into OCI Object Storage. Which two features of OCI can help you achieve this? (Choose two.)

- **A. Service Connectors**
- **B. ObjectCollection Rule**
- C. Cloud Agent Plugin Grouping Function
- D. Agent Configuration

**Antwort: A,B**

Begründung:

To collect logs from on-premises instances and archive Info-level logs in OCI Object Storage, you need tools for log ingestion and data movement:

Service Connectors (A): This feature enables data transfer from OCI Logging (source) to Object Storage (target). You can configure a service connector with a filter (e.g., log level = Info) to archive only Info-level logs.

ObjectCollection Rule (D): Part of Logging Analytics, this rule collects logs from Object Storage buckets into Logging Analytics for analysis. If logs are first written to Object Storage by an agent, this rule ensures continuous ingestion.

Why not B or C?

Agent Configuration (B): Used to set up Management Agents but doesn't handle archiving to Object Storage.

Cloud Agent Plugin Grouping Function (C): This is not a valid OCI feature.

The workflow involves agents sending logs to Logging, Service Connectors filtering and moving them to Object Storage, and ObjectCollection Rules enabling further analysis.

## 25. Frage

Which Logging Analytics concept represents an asset on your host that could provide log data?

- A. Parser
- B. Entity
- **C. Source**
- D. Association

**Antwort: C**

Begründung:

In OCI Logging Analytics, a Source defines the origin of log data from an asset on a host.

Source (B): Represents a log-generating asset (e.g., a file, database audit log, or Windows event log), specifying its location, format, and collection frequency. It's associated with an Entity to enable log ingestion and parsing.

Why not A, C, or D?

Association (A): Links a Source to an Entity, not the asset itself.

Entity (C): A logical representation of a resource (e.g., a host), not the log source.

Parser (D): Extracts fields from logs, not the asset providing data.

Sources are foundational to log collection in Logging Analytics.

## 26. Frage

Which two resources can be monitored by Stack Monitoring? (Choose two.)

- A. Object Storage Buckets
- **B. WebLogic Servers**
- C. Virtual Cloud Networks
- **D. Oracle External Databases**

**Antwort: B,D**

Begründung:

Stack Monitoring tracks application stack components:

WebLogic Servers (B): Monitors performance and health of WebLogic instances.

Oracle External Databases (C): Tracks on-premises or cloud Oracle databases outside OCI's native DBaaS.

Why not A or D?

Object Storage Buckets (A): Not supported by Stack Monitoring; use Logging instead.

## 27. Frage
