APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q64-Q69):

NEW QUESTION # 64
Identify the missing words in the following sentence.
The organization shall establish, implement, maintain and [?] an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document.

- A. communicate the importance of
- B. report on
- C. enforce standards for
- D. continually improve

Answer: D

Explanation:
Clause 4.4 of ISO/IEC 27001:2022 states:
"The organization shall establish, implement, maintain and continually improve an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document." This requirement highlights that an ISMS is not static; it must evolve continuously to adapt to new risks, technologies, and business changes. Options A, C, and D are not mentioned in the clause. The continual improvement cycle is central to ISO standards, aligning with thePlan-Do-Check-Act (PDCA)model.
Thus, the missing words are"continually improve."

NEW QUESTION # 65
What is a requirement for a corrective action made in response to a nonconformity?

- A. They do NOT change the organization's information security policies
- B. They are appropriate to the effects of the nonconformity
- C. They always eliminate the cause of the nonconformity
- D. They are proportionate to the likelihood of the nonconformity recurring

Answer: B

Explanation:
Clause 10.1 (Nonconformity and corrective action) specifies:
"The organization shall react to the nonconformity and, as applicable: take action to control and correct it; deal with the consequences; evaluate the need for action to eliminate the cause(s)...
Corrective actions shall be appropriate to the effects of the nonconformities encountered."

NEW QUESTION # 66
What activity is done first when preparing for an initial certification audit?

- A. Provide records to the Certification Body auditor for the Stage 2 audit
- B. Provide documents to the Certification Body auditor for the Stage 1 audit
- C. Provide evidence that nonconformities from an internal audit have been actioned
- D. Agree the scope of the ISMS with the Certification Body auditor

Answer: D

Explanation:
Before a certification audit can begin, the scope of the ISMS must be clearly defined and agreed with the Certification Body. ISO/IEC 27001 Clause 4.3 requires: "The scope shall be available as documented information."

NEW QUESTION # 67
Which statement is a factor that will influence the implementation of the information security management system?

- A. The ISMS will be scaled to the controls according to the needs of the organization
- B. The ISMS will encompass all controls specified within ISO/IEC 27001
- C. The ISMS will be separate from the organization's overall management structure
- D. The ISMS will be operated as an independent process within the organization

Answer: A

Explanation:
ISO/IEC 27001 makes clear that the ISMS is intended to be tailored to the organization. The standard states: " This document also includes requirements for the assessment and treatment of information security risks tailored to the needs of the organization. The requirements set out in this document are generic and are intended to be applicable to all organizations regardless of type, size or nature." This means implementation is scaled based on each organization's risk, context, and needs, not a fixed one-size-fits-all set of activities or controls. Clause 6.1.3 further reinforces that control selection is flexible and risk-driven: " Organizations can design controls as required or identify them from any source," and "Annex A contains a list of possible information security controls... The information security controls listed in Annex A are not exhaustive and additional information security controls can be included if needed." Together, these extracts verify that the ISMS implementation is influenced by and scaled to the organization's needs and selected controls, not separated from management processes (A, D) nor mandated to include "all controls" (B).

NEW QUESTION # 68
In an audit, what is the definition of an observation?

- A. A conformity to the standard where there is an opportunity for improvement
- B. An issue excluded from the scope of the standard
- C. A non-fulfilment of a requirement of ISO/IEC 27001
- D. An issue raised by an interested party

Answer: A

Explanation:
ISO/IEC 27001 mandates internal audits (Clause 9.2) and continual improvement (Clause 10.1) but does not define the specific audit term "observation." However, the audit framework in 9.2 requires an audit programme and impartial auditors, and management review inputs include
"feedback on the information security performance including trends in... audit results" and
"opportunities for continual improvement." The companion implementation guidance (ISO/IEC
27002) reinforces the concept of opportunities for improvement in the review of policies: "The reviews should include assessing opportunities for improvement and the need for changes to the approach to information security..." In practical ISO audit usage (aligned with ISO 19011 guidance referenced in the Study Guide), an observation is a recorded conformity where improvement is advisable--commonly termed an Opportunity for Improvement (OFI). The Study Guide's internal audit section emphasizes running an audit programme to identify "potential areas of weakness or non-compliance," supporting the notion of recording improvement opportunities alongside nonconformities.
