Highlighted Features of Salesforce Development-Lifecycle-and-Deployment-Architect Exam Practice Questions

Our after sales services are also considerate. If you get any questions with our Development-Lifecycle-and-Deployment-Architect guide question, all helps are available upon request. Once you place your order this time, you will enjoy and experience comfortable and convenient services immediately. Besides, we do not break promise that once you fail the Development-Lifecycle-and-Deployment-Architect Exam, we will make up to you and relieve you of any loss. Providing with related documents, and we will give your money back. We have been always trying to figure out how to provide warranty service if customers have questions with our Development-Lifecycle-and-Deployment-Architect real materials.

In addition to technical expertise, candidates must also have excellent communication and collaboration skills. They must be able to work effectively with business stakeholders, project managers, and other development teams. They must also be able to document their work and provide clear and concise reports to management and other stakeholders.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q141-Q146):

NEW QUESTION # 141
Due to several issues, Universal Containers wants to have better control over the changes made in the production org and to be able to track them. Which two options will streamline the process? Choose 2 answers

- A. Make all code/configuration changes directly in the production org.
- B. Use Metadata API to automate deployment to the production.org
- C. Use the Force.com IDE to automate deployment to the production.org
- D. Allow no code/configuration changes directly in the production.org

Answer: B,D

Explanation:
Allowing no code/configuration changes directly in the production org and using Metadata API to automate deployment to the production org are two options that will streamline the process. These options help to enforce a consistent and controlled deployment process that avoids manual errors and conflicts in the production org.

NEW QUESTION # 142
Universal Containers is delivering many changes to its Salesforce system. Adoption reports are discovering that many features are unused. The steering committee wants this to change and is looking to the architect for advice.
What should an architect recommend to overcome this?

- A. Sending weekly communication emails reporting on least engaged users
- B. Using Lightning Web Components for every user interface.
- C. Stop development until current features start being used.
- D. Adopting user centered design to understand user needs before building the solution.

Answer: D

NEW QUESTION # 143
Universal Containers (UC) has a huge volume of metadata that cannot be deployed at once. What is the recommended strategy for UC to be successful with the deployment?

- A. Use a combination of the Ant migration tool and change sets for deployment.
- B. Sort and group the metadata alphabetically and deploy them in the same order.
- C. Identify metadata dependencies, create logical groupings, and deploy in the right order.
- D. Use a continuous integration tool such as Jenkins to deploy in the right order.

Answer: C

Explanation:
Explanation
The recommended strategy for deploying a large volume of metadata is to identify metadata dependencies, create logical groupings, and deploy in the right order. This can help avoid errors and ensure a smooth deployment process.

NEW QUESTION # 144
Universal Containers is working on the next phase of development for their Salesforce implementation involving a large amount of custom development. Which two strategies should be considered to address a critical production issue occurring in the middle of development? Choose 2 answers

- A. Refresh a sandbox for replication of the issue and testing the use -case scenarios once the code is fixed
- B. Create separate branches for current development and production bug fixes and deploy the fix with current development when ready
- C. Utilize one branch for both development and production bug fixes to avoid out-of-sync branches and simplify deployment
- D. Utilize a source control system to allow separate branches for current development and production bug fixes

Answer: A,D

Explanation:

C and D are the correct answers, as they are the best strategies to address a critical production issue occurring in the middle of development. C is correct, as using a source control system to allow separate branches for current development and production bug fixes can help to isolate the changes and avoid conflicts or overwriting. D is correct, as refreshing a sandbox for replication of the issue and testing the use-case scenarios once the code is fixed can help to ensure the quality and functionality of the solution before deploying it to production. A is incorrect, as creating separate branches for current development and production bug fixes and deploying the fix with current development when ready can delay the resolution of the production issue and introduce new risks or errors. B is incorrect, as utilizing one branch for both development and production bug fixes to avoid out-of-sync branches and simplify deployment can create confusion and complexity in the code and make it harder to test and validate. You can learn more about these strategies in the Application Lifecycle and Deployment module on Trailhead.

NEW QUESTION # 145

Universal Containers (UC) works with different partners and has few admin resources that take care of the day-to-day deployment tasks. As a result, UC would like to find a way to automate the deployments using Metadata API. Which two limitations of Metadata API should be considered when using Metadata API-based Deployments? Choose 2 answers

- A. Maximum size of deployed .zip file is 400MB.
- B. Maximum Size of deployed .zip file is 39MB.
- C. Deploy and retrieve up to 10,000 files at once.
- D. Deploy up to 10,000 files, but retrieve more than 10,000 files.

Answer: B,C
