High-quality CCRN-Pediatric Test Free - Pass CCRN-Pediatric Once - Complete CCRN-Pediatric Testking Exam Questions

Windows computers support the desktop practice test software. SureTorrent has a complete support team to fix issues of AACN CCRN-Pediatric practice test software users. SureTorrent practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their Critical Care Nursing Exam (CCRN-Pediatric) preparation status and remove their mistakes.

AACN Critical Care Nursing Exam Sample Questions (Q70-Q75):

NEW QUESTION # 70

A child was scheduled for a palliative surgery, which creates anastomosis of the subclavian artery to the pulmonary artery. This

procedure is called:

- **A. Blalock-Tausig**
- B. Coronary artery bypass
- C. Raskkind Procedure
- D. Waterston-Cooley

Answer: A

Explanation:

Explanation: Blalock-Tausig procedure is just a temporary or palliative surgery which creates a shunt between the aorta and pulmonary artery so that the blood can leave the aorta and enter the pulmonary artery and thus oxygenating the lungs and return to the left side of the heart, then to the aorta then to the body. This procedure also makes use of the subclavian vein so pulse is not palpable at the right arm.

NEW QUESTION # 71

CSF analysis shows: glucose 36 mg/dL, protein 110 mg/dL, and WBCs (PMNs) 1,000/microliters. These findings are indicative of:

- **A. Bacterial meningitis**
- B. Encephalitis
- C. Viral meningitis
- D. Guillain-Barre syndrome

Answer: A

Explanation:

Classic CSF findings in bacterial meningitis:

* Low glucose (<40 mg/dL) - due to bacterial consumption

* High protein (>100 mg/dL) - from inflammation and blood-brain barrier disruption

* High WBCs, particularly polymorphonuclear cells (>1000/microliter) - indicating a strong immune response. These values are not consistent with viral meningitis or autoimmune disorders like Guillain-Barre.

"In bacterial meningitis, CSF typically reveals hypoglycorrachia, elevated protein, and a predominance of neutrophilic leukocytosis." (Referenced from CCRN Pediatric - Direct Care: Neurological, Meningitis Diagnosis and Management)

NEW QUESTION # 72

A 15-year-old boy comes to a clinic with complaint of thick urethral discharge. For gonorrhea to be ruled out the nurse should:

- A. collect urine sample
- B. obtain sexual history
- C. obtain blood sample for VDRL
- **D. obtain urethral specimen**

Answer: D

Explanation:

Explanation: If the causative agent/organism is present in the genitourinary tract of the client, a culture of the urethral exudates would provide a definitive diagnosis.

NEW QUESTION # 73

A stat abdominal x-ray reveals free air and a large loculated fluid collection presumed to be blood. The priority of care should be:

- A. Platelet transfusion
- **B. Surgical intervention**
- C. Vasopressin (Pitressin) therapy
- D. Nasogastric tube placement

Answer: B

Explanation:

Free air on abdominal x-ray indicates bowel perforation, and loculated fluid suggests hemoperitoneum or intra-abdominal bleeding. This is a surgical emergency, and the child requires immediate operative intervention to prevent further deterioration.

"Free intraperitoneal air and fluid suggest perforation and hemorrhage, which require emergent surgical exploration and correction to prevent peritonitis and shock." (Referenced from CCRN Pediatric - Direct Care: Gastrointestinal, Surgical Emergencies and Acute Abdomen)

NEW QUESTION # 74

Family members have been complaining about limited visiting hours. To facilitate a potential change in practice, a nurse should first:

- A. Draft a new policy regarding visitation practices for the unit
- B. Schedule an interdisciplinary team meeting to discuss visiting hours
- C. Consult with medical staff to change visiting hours
- D. Begin a literature search on family visitation practices

Answer: D

Explanation:

Before initiating policy changes, the nurse must conduct an evidence-based literature review to assess the benefits and risks associated with altering visitation policies. This aligns with professional nursing standards that promote evidence-informed practice and family-centered care.

"In professional practice, initiating a literature review is the first step in evidence-based change. This supports the rationale for modifying clinical practices and promotes interdisciplinary consensus." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Evidence-Based Practice and Family-Centered Care)

NEW QUESTION # 75

.....

We believe that our CCRN-Pediatric exam questions that you can use our products to prepare the exam and obtain your dreamed certificates.
