

Latest Released Exam SSE-Engineer Reference - Palo Alto Networks Latest Test Palo Alto Networks Security Service Edge Engineer Experience

DOWNLOAD the newest Getcertkey SSE-Engineer PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=18kD5Nhl-k9KtK29wVz3ej_Z0LkDmJo-3

We can say that how many the SSE-Engineer certifications you get and obtain qualification certificates, to some extent determines your future employment and development, as a result, the SSE-Engineer exam guide is committed to helping you become a competitive workforce, let you have no trouble back at home. Actually, just think of our SSE-Engineer Test Prep as the best way to pass the SSE-Engineer exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

Palo Alto Networks SSE-Engineer Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Prisma Access Troubleshooting: This section of the exam measures the skills of Technical Support Engineers and covers the monitoring and troubleshooting of Prisma Access environments. It includes the use of Prisma Access Activity Insights, real-time alerting, and a Command Center for visibility. Candidates are expected to troubleshoot connectivity issues for mobile users, remote networks, service connections, and ZTNA connectors. It also focuses on resolving traffic enforcement problems including security policies, HIP enforcement, User-ID mismatches, and split tunneling performance issues.
Topic 2	<ul style="list-style-type: none"> Prisma Access Planning and Deployment: This section of the exam measures the skills of Network Security Engineers and covers foundational knowledge and deployment skills related to Prisma Access architecture. Candidates must understand key components such as security processing nodes, IP addressing, DNS, and compute locations. It evaluates routing mechanisms including routing preferences, backbone routing, and traffic steering. The section also focuses on deploying Prisma Access service infrastructure for mobile users using VPN clients or explicit proxy and configuring remote networks. Additional topics include enabling private application access using service connections, Colo-Connect, and ZTNA connectors, implementing identity authentication methods like SAML, Kerberos, and LDAP, and deploying Prisma Access Browser for secure user access.

Topic 3	<ul style="list-style-type: none"> • Prisma Access Administration and Operation: This section of the exam measures the skills of IT Operations Managers and focuses on managing Prisma Access using Panorama and Strata Cloud Manager. It tests knowledge of multitenancy, access control, configuration, and version management, and log reporting. Candidates should be familiar with releasing upgrades and leveraging SCM tools like Copilot. The section also evaluates the deployment of the Strata Logging Service and its integration with Panorama and SCM, log forwarding configurations, and best practice assessments to maintain security posture and compliance.
Topic 4	<ul style="list-style-type: none"> • Prisma Access Services: This section of the exam measures the skills of Cloud Security Architects and covers advanced features within Prisma Access. Candidates are assessed on how to configure and implement enhancements like App Acceleration, traffic replication, IoT security, and privileged remote access. It also includes implementing SaaS security and setting up effective policies related to security, decryption, and QoS. The section further evaluates how to create and manage user-based policies using tools like the Cloud Identity Engine and User ID for proper identity mapping and authentication.

Latest Test SSE-Engineer Experience - SSE-Engineer PDF Question

Hundreds of applicants who register themselves for the Palo Alto Networks Security Service Edge Engineer (SSE-Engineer) certification exam, lack updated practice test questions to prepare successfully in a short time. As a result of which, they don't crack the Palo Alto Networks Security Service Edge Engineer (SSE-Engineer) examination which causes a loss of time and money and sometimes loss of the encouragement to take the test for the second time. Getcertkey can save you from facing these issues with its real Palo Alto Networks SSE-Engineer Exam Questions.

Palo Alto Networks Security Service Edge Engineer Sample Questions (Q39-Q44):

NEW QUESTION # 39

How can role-based access control (RBAC) for Prisma Access (Managed by Strata Cloud Manager) be used to grant each member of a security team full administrative access to manage the Security policy in a single tenant while restricting access to other tenants in a multitenant deployment?

- A. Add the team to the Child Tenant, select Prisma Access & NGFW Configuration, and set the role to Security Administrator.
- B. Add the team to the Parent Tenant, select Prisma Access & NGFW Configuration, and set the role to Security Administrator.
- C. Add the team to the Parent Tenant, select the Prisma Access Configuration Scope, and set the role to Security Administrator.
- D. Add the team to the Child Tenant, select All Apps & Services, and set the role to Security Administrator.

Answer: A

Explanation:

In a multitenant deployment, access control must be configured at the Child Tenant level to ensure that security administrators have full control over Security policy only within their assigned tenant while restricting access to other tenants. By selecting Prisma Access & NGFW Configuration, the assigned users gain full administrative access only for security policy management within the designated tenant, aligning with RBAC best practices for controlled access in Prisma Access Managed by Strata Cloud Manager.

NEW QUESTION # 40

How can an engineer verify that only the intended changes will be applied when modifying Prisma Access policy configuration in Strata Cloud Manager (SCM)?

- A. Compare the candidate configuration and the most recent version under "Config Version Snapshots/"
- B. Select the most recent job under Operations > Push Status to view the pending changes that would apply to Prisma Access.

- C. Review the SCM portal for blue circular indicators next to each configuration menu item and ensure only the intended areas of configuration have this indicator.
- **D. Open the push dialogue in SCM to preview all changes which would be pushed to Prisma Access.**

Answer: D

Explanation:

Palo Alto Networks documentation explicitly states that the "Preview Changes" functionality within the Strata Cloud Manager (SCM) push dialogue allows engineers to review a detailed summary of all modifications that will be applied to the Prisma Access configuration before committing the changes. This is the primary and most reliable method to ensure only the intended changes are deployed.

Let's analyze why the other options are incorrect based on official documentation:

* A. Review the SCM portal for blue circular indicators next to each configuration menu item and ensure only the intended areas of configuration have this indicator. While blue circular indicators might signify unsaved changes within a specific configuration section, they do not provide a comprehensive, consolidated view of all pending changes across different policy areas. This method is insufficient for verifying the entirety of the intended modifications.

* B. Compare the candidate configuration and the most recent version under "Config Version Snapshots". While comparing configuration snapshots is a valuable method for understanding historical changes and potentially identifying unintended deviations after a push, it does not provide a real-time preview of the pending changes before they are applied during the current modification session.

* C. Select the most recent job under Operations > Push Status to view the pending changes that would apply to Prisma Access. The "Push Status" section primarily displays the status and details of completed or in-progress push operations. It does not offer a preview of the changes before a push is initiated.

Therefore, the "Preview Changes" feature within the push dialogue is the documented and recommended method for an engineer to verify that only the intended changes will be applied when modifying Prisma Access policy configuration in Strata Cloud Manager (SCM).

NEW QUESTION # 41

Which statement is valid in relation to certificates used for GlobalProtect and pre-logout?

- A. The certificate used for pre-logout must include both Subject and Subject-Alt fields.
- **B. Certificates must be deployed in the Machine Certificate Store.**
- C. A public certificate authority (CA) must sign and validate all certificates used.
- D. The GlobalProtect agent may be used to distribute pre-logout certificates.

Answer: B

Explanation:

For GlobalProtect with pre-logout, certificates must be installed in the Machine Certificate Store to ensure that authentication occurs before user login. This allows the GlobalProtect client to establish a VPN connection before the user logs in, enabling access to corporate resources such as domain controllers and authentication services. Using machine certificates ensures secure authentication and eliminates dependency on user credentials at the pre-logout stage.

NEW QUESTION # 42

An engineer has configured IPSec tunnels for two remote network locations; however, users are experiencing intermittent connectivity issues across the tunnels.

What action will allow the engineer to receive notifications when the IPSec tunnels are down or experiencing instability?

- **A. Create a new notification profile specifying conditions for remote network IPSec tunnels.**
- B. Set up the operational health dashboard to email alerts for remote Network IPSec tunnel issues.
- C. Select the IPSec tunnel monitoring and notifications checkbox when configuring the remote network IPSec tunnels.
- D. Create a tunnel log notification rule to alert on specified remote network IPSec tunnel conditions.

Answer: A

Explanation:

In Prisma Access, configuring a notification profile allows engineers to receive alerts when IPSec tunnels experience downtime or instability. By defining specific conditions for remote network IPSec tunnels, the notification profile ensures that the engineer is proactively informed about tunnel failures, flapping, or degraded performance. This approach enables timely troubleshooting and

minimizes disruptions for users relying on the IPSec tunnels.

NEW QUESTION # 43

Where are tags applied to control access to Generative AI when implementing AI Access Security?

- A. To Generative AI URL categories for classifying trusted and untrusted Generative AI websites
- **B. To Generative AI applications for identifying sanctioned, tolerated, or unsanctioned applications**
- C. To security rules for defining which types of Generative AI applications are allowed or blocked
- D. To user devices for identifying and controlling which Generative AI applications they can access

Answer: B

Explanation:

When implementing AI Access Security, tags are applied to Generative AI applications to classify them as sanctioned, tolerated, or unsanctioned. This allows organizations to enforce policy-based access control over AI tools, ensuring that only approved applications are accessible while restricting or monitoring usage of untrusted or high-risk AI platforms. This classification helps security teams manage AI-related risks and compliance effectively.

NEW QUESTION # 44

.....

We have an integrated system for you. We offer you free demo for SSE-Engineer exam braindumps before purchasing. And you can get the downloading link and password in ten minutes after your payment, therefore you can start your learning immediately. We also provide free update for one year after you purchase SSE-Engineer Exam Dumps. After you have purchased the exam dumps, we also have the after-service to solve any problems you have. You can consult your question about SSE-Engineer exam dumps to our online and offline service staff.
