

# New CAS-005 Test Experience & Reliable CAS-005 Practice Materials

## Authentic CAS-005 Exam Dumps

### Prepare for CompTIA CAS-005 Exam like a Pro:

PassExam4Sure is famous for its top-notch services for providing the most helpful, accurate, and up-to-date material for CompTIA CAS-005 exam in form of PDFs. Our [CAS-005 dumps](#) for this particular exam is timely tested for any reviews in the content and if it needs any format changes or addition of new questions as per new exams conducted in recent times. Our highly-qualified professionals assure the guarantee that you will be passing out your exam with at least 85% marks overall. PassExam4Sure CompTIA CAS-005 ProvenDumps is the best possible way to prepare and pass your certification exam.

P.S. Free 2026 CompTIA CAS-005 dumps are available on Google Drive shared by DumpExam: [https://drive.google.com/open?id=1AlAaFeEASWNOBb1BTYd-9\\_Yi7XG3i9v](https://drive.google.com/open?id=1AlAaFeEASWNOBb1BTYd-9_Yi7XG3i9v)

The web-based practice test is similar to the desktop-based software, with all the same elements of the desktop practice exam. The mock exam can be accessed from any browser and does not require installation. The CAS-005 questions in the mock test are the same as those in the real exam. Candidates can take the web-based CompTIA SecurityX Certification Exam (CAS-005) practice test immediately, regardless of the operating system and browser they are using.

Preparing for CompTIA SecurityX Certification Exam (CAS-005) exam can be a challenging task, especially when you're already juggling multiple responsibilities. People who don't study with updated CompTIA CAS-005 practice questions fail the test and lose their resources. If you don't want to end up in this unfortunate situation, you must prepare with actual and Updated CAS-005 Dumps of DumpExam. At DumpExam, we believe that one size does not fit all when it comes to CompTIA CAS-005 exam preparation. Our team of experts has years of experience in providing CompTIA CAS-005 exam preparation materials that help you reach your full potential.

[>> New CAS-005 Test Experience <<](#)

## Reliable CAS-005 Practice Materials | CAS-005 Test Prep

We provide you the CAS-005 practice materials, which include both the questions and answers, and you can improve your ability for the CAS-005 exam through practicing the materials. Furthermore the CAS-005 practice materials are of high quality, since they are compiled by the experienced experts, and the professionals will expect the exam dumps to guarantee the quality. At the same time, money back guarantee for your failure of the exam, free update for one year after purchasing the CAS-005 exam.

## CompTIA SecurityX Certification Exam Sample Questions (Q298-Q303):

### NEW QUESTION # 298

A security engineer receives an alert from the threat intelligence platform with the following information:

□ Which of the following actions should the security engineer do first?

- A. Reset John's and Joe's passwords and inform authorities about the leakage.
- B. Reset John's, Ann's, and Joe's passwords and disconnect all users\* active sessions
- C. Contact John, Ann, and Joe to inform them about the incident and schedule a password reset.
- D. Reset John's and Joe's access.

**Answer: D**

Explanation:

The first action should be to reset access for John and Joe, who are corporate accounts belonging to the organization. Their credentials were exposed in recent leaks, including one from an initial access broker (Joe), which indicates an active exploitation risk. Immediate password resets and session invalidations prevent adversaries from using the compromised credentials to gain access.

Ann's account (@hotmail.com) is personal and not under corporate management, so while her exposure is concerning, it does not pose a direct risk to organizational systems. Contacting her can follow later steps but should not delay urgent remediation for John and Joe.

Option B delays remediation. Option C overreaches by including Ann in corporate resets. Option D includes contacting authorities prematurely, which is important but secondary to immediate containment.

### NEW QUESTION # 299

A company recently experienced an incident in which an advanced threat actor was able to shim malicious code against the hardware static of a domain controller. The forensic team cryptographically validated that the underlying firmware of the box and the operating system had not been compromised. However, the attacker was able to exfiltrate information from the server using a steganographic technique within LDAP. Which of the following is the best way to reduce the risk of reoccurrence?

- A. Enforcing allow lists for authorized network ports and protocols
- B. Rolling the cryptographic keys used for hardware security modules
- C. Using code signing to verify the source of OS updates
- D. Measuring and attesting to the entire boot chain

**Answer: A**

Explanation:

The scenario describes a sophisticated attack where the threat actor used steganography within LDAP to exfiltrate data. Given that the hardware and OS firmware were validated and found uncompromised, the attack vector likely exploited a network communication channel. To mitigate such risks, enforcing allow lists for authorized network ports and protocols is the most effective strategy.

Here's why this option is optimal:

Port and Protocol Restrictions: By creating an allow list, the organization can restrict communications to only those ports and protocols that are necessary for legitimate business operations. This reduces the attack surface by preventing unauthorized or unusual traffic.

Network Segmentation: Enforcing such rules helps in segmenting the network and ensuring that only approved communications occur, which is critical in preventing data exfiltration methods like steganography.

Preventing Unauthorized Access: Allow lists ensure that only predefined, trusted connections are allowed, blocking potential paths that attackers could use to infiltrate or exfiltrate data.

Other options, while beneficial in different contexts, are not directly addressing the network communication threat:

B: Measuring and attesting to the entire boot chain: While this improves system integrity, it doesn't directly mitigate the risk of data exfiltration through network channels.

C: Rolling the cryptographic keys used for hardware security modules: This is useful for securing data and communications but doesn't directly address the specific method of exfiltration described.

D: Using code signing to verify the source of OS updates: Ensures updates are from legitimate sources, but it doesn't mitigate the risk of network-based data exfiltration.

### NEW QUESTION # 300

A company that uses several cloud applications wants to properly identify:

All the devices potentially affected by a given vulnerability.

All the internal servers utilizing the same physical switch.

The number of endpoints using a particular operating system Which of the following is the best way to meet the requirements?

- A. SBoM
- B. GRC
- C. CASB
- D. CMDB

**Answer: D**

Explanation:

The requirements demand detailed asset tracking and inventory management. Let's analyze:

A). SBoM (Software Bill of Materials):Tracks software components, not hardware or network topology.

B). CASB (Cloud Access Security Broker):Secures cloud apps but doesn't map physical switches or OS counts.

C). GRC(Governance, Risk, and Compliance):Focuses on risk management, not detailed asset tracking

Reference:CompTIA SecurityX (CAS-005) objectives, Domain 4: Governance, Risk, and Compliance, covering asset management.

### NEW QUESTION # 301

An organization is planning for disaster recovery and continuity of operations, and has noted the following relevant findings:

1. A natural disaster may disrupt operations at Site A, which would then cause an evacuation. Users are unable to log into the domain from their workstations after relocating to Site B.

2. A natural disaster may disrupt operations at Site A, which would then cause the pump room at Site B to become inoperable.

3. A natural disaster may disrupt operations at Site A, which would then cause unreliable internet connectivity at Site B due to route flapping.

#### INSTRUCTIONS

Match each relevant finding to the affected host by clicking on the host name and selecting the appropriate number.

For findings 1 and 2, select the items that should be replicated to Site B. For finding 3, select the item requiring configuration changes, then select the appropriate corrective action from the drop-down menu.

□

**Answer:**

Explanation:

See the complete solution below in Explanation:

Explanation:

Matching Relevant Findings to the Affected Hosts:

Finding 1:

Affected Host: DNS

Reason: Users are unable to log into the domain from their workstations after relocating to Site B, which implies a failure in domain name services that are critical for user authentication and domain login.

Finding 2:

Affected Host: Pumps

Reason: The pump room at Site B becoming inoperable directly points to the critical infrastructure components associated with pumping operations.

Finding 3:

Affected Host: VPN Concentrator

Reason: Unreliable internet connectivity at Site B due to route flapping indicates issues with network routing, which is often managed by VPN concentrators that handle site-to-site connectivity.

Corrective Actions for Finding 3:

Finding 3 Corrective Action:

Action: Modify the BGP configuration

Reason: Route flapping is often related to issues with Border Gateway Protocol (BGP) configurations.

Adjusting BGP settings can stabilize routes and improve internet connectivity reliability.

Replication to Site B for Finding 1:

#### Affected Host: DNS

Domain Name System (DNS) services are essential for translating domain names into IP addresses, allowing users to log into the network. Replicating DNS services ensures that even if Site A is disrupted, users at Site B can still authenticate and access necessary resources.

#### Replication to Site B for Finding 2:

#### Affected Host: Pumps

The operation of the pump room is crucial for maintaining various functions within the infrastructure.

Replicating the control systems and configurations for the pumps at Site B ensures that operations can continue smoothly even if Site A is affected.

#### Configuration Changes for Finding 3:

#### Affected Host: VPN Concentrator

Route flapping is a situation where routes become unstable, causing frequent changes in the best path for data to travel. This instability can be mitigated by modifying BGP configurations to ensure more stable routing.

VPN concentrators, which manage connections between sites, are typically configured with BGP for optimal routing.

### NEW QUESTION # 302

A security analyst is reviewing the following code in the public repository for potential risk concerns:

typescript

CopyEdit

```
include bouncycastle-1.4.jar;
include jquery-2.0.2.jar;
public static void main() {...}
public static void territory() { ... }
public static void state() { ... }
public static String code = "init";
public static String access_token = "spat-hfeiw-sogur-werdb-werib";
```

Which of the following should the security analyst recommend first to remediate the vulnerability?

- A. Scanning the application with SAST
- B. Developing role-based security awareness training
- C. Purging code from public view
- D. Revoking the secret used in the solution

#### Answer: D

Explanation:

Comprehensive and Detailed Explanation:

The code snippet exposes a hardcoded access token in a public repository. According to SecurityX CAS-005 secure coding best practices, the immediate action must be to revoke the exposed secret to prevent unauthorized access.

\* Removing the code from public view without revoking the token leaves the secret still usable by any attacker who has already seen or copied it.

\* SAST scanning would detect the issue but not mitigate it immediately.

\* Security awareness training is a long-term prevention measure but does not fix the immediate exposure.

Revoking the secret first stops ongoing exploitation, after which the code can be removed, and preventative measures can be implemented.

### NEW QUESTION # 303

.....

The CompTIA SecurityX Certification Exam (CAS-005) web-based practice test works on all major browsers such as Safari, Chrome, MS Edge, Opera, IE, and Firefox. Users do not have to install any excessive software because this CAS-005 practice test is web-based. It can be accessed through any operating system like Windows, Linux, iOS, Android, or Mac. Another format of the practice test is the desktop software. It works offline only on Windows. Our CompTIA SecurityX Certification Exam (CAS-005) desktop-based practice exam software comes with all specifications of the web-based version.
