If you are the first time to take part in the exam. We strongly advise you to buy our Chrome-Enterprise-Administrator training materials. One of the most advantages is that our Chrome-Enterprise-Administrator study braindumps are simulating the real exam environment. Many candidates usually feel nervous in the real exam. If you purchase our Chrome-Enterprise-Administrator Guide questions, you do not need to worry about making mistakes when you take the real exam. In addition, you have plenty of time to practice on our Chrome-Enterprise-Administrator exam prep.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
Topic 2	<ul style="list-style-type: none">• Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 3	<ul style="list-style-type: none">• Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
Topic 4	<ul style="list-style-type: none">• Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
Topic 5	<ul style="list-style-type: none">• Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.

Quiz 2026 Google Authoritative Chrome-Enterprise-Administrator: Trustworthy Professional Chrome Enterprise Administrator Certification Exam Exam Content

The DumpsActual offers three formats for applicants to practice and prepare for the Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) exam as per their needs. The pdf format of DumpsActual is portable and can be used on laptops, tablets, and smartphones. Print real Professional Chrome Enterprise Administrator Certification Exam (Chrome-Enterprise-Administrator) exam questions in our PDF file. The pdf is user-friendly and accessible on any smart device, allowing applicants to study from anywhere at any time.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q22-Q27):

NEW QUESTION # 22

How often do extensions update?"

- A. When Chrome is running, the update occurs within the first few minutes of launching Chrome and then again every few hours Updates occur when users sign into the Chrome Web Store
- B. When Chrome is not running, the update occurs within the first few minutes of OS loading and then again every few hours when a new version is available in the Chrome Web Store, even when Chrome is not running
- C. Extensions update immediately whenever the developer publishes a new version to the Chrome Web Store, regardless of whether Chrome is running
- D. Extensions only update when the user manually initiates the update process from the Chrome Web Store's extension management page

Answer: A

Explanation:

Chrome checks for extension updates periodically when the browser is running. This check typically happens within the first few minutes of launching Chrome and then again every few hours. While updates are triggered by developers publishing to the Chrome Web Store, the actual update on the user's browser happens when Chrome is active and performs these periodic checks. Option A is incorrect as extensions generally don't update when Chrome is not running. Option C describes a manual update process, which is not the default behavior. Option D is incorrect because the update on the user's end is dependent on Chrome being active and checking for updates.

NEW QUESTION # 23

When a Chrome browser under cloud management goes to a potentially risky website, that action is logged in the Audit and Investigation Report as what type of event?"

- A. SSL Error
- B. Untrusted Site Visit
- C. Site Isolation Violation
- D. Site Warning Unsafe Site Visit

Answer: D

Explanation:

When Chrome's Safe Browsing feature identifies a website as potentially risky and displays a warning page that the user might bypass to visit the site, this interaction is typically logged in the Audit and Investigation Report as a "Site Warning Unsafe Site Visit" event. This allows administrators to track instances where users might be exposed to potentially malicious content despite browser warnings. SSL errors relate to certificate issues, untrusted site visit is a more general term, and site isolation violation refers to a different security mechanism.

NEW QUESTION # 24

How often do extensions update?"

- A. When Chrome is running, the update occurs within the first few minutes of launching Chrome and then again every few hours Updates occur when users sign into the Chrome Web Store
- B. When Chrome is not running, the update occurs within the first few minutes of OS loading and then again every few hours when a new version is available in the Chrome Web Store, even when Chrome is not running
- C. Extensions update immediately whenever the developer publishes a new version to the Chrome Web Store, regardless of whether Chrome is running
- D. Extensions only update when the user manually initiates the update process from the Chrome Web Store's extension management page

Answer: A

Explanation:

Chrome checks for extension updates periodically when the browser is running. This check typically happens within the first few minutes of launching Chrome and then again every few hours. While updates are triggered by developers publishing to the Chrome Web Store, the actual update on the user's browser happens when Chrome is active and performs these periodic checks. Option A is incorrect as extensions generally don't update when Chrome is not running. Option C describes a manual update process, which is not the default behavior. Option D is incorrect because the update on the user's end is dependent on Chrome being active and checking for updates.

NEW QUESTION # 25

A company uses Chrome Enterprise Core to manage Chrome browsers for its employees and contractors who share devices They need a way to ensure the following:

- * Full-Time Employees (FTEs) can only see and use extensions assigned to them
- * Contractors can only see and use extensions assigned to them
- * Both FTEs and contractors have access to a set of shared extensions

How can the Chrome administrator configure Chrome Enterprise Core to achieve this'?

- A. Create Organizational Units (OUs) for Shared devices, assign shared extensions to the OU. Use Group Policy Objects to assign specific extensions by user group
- B. Create Organizational Units (OUs) for Shared devices, assign shared extensions to the OU. Create a separate group in the Google Admin Console for FTEs. Assign extensions to the group based on their needs
- C. Create separate groups in the Google Admin Console for FTEs and Contractors. Assign extensions to respective groups based on their needs
- D. Ask users to install all the extensions they need on the shared device

Answer: B

Explanation:

The most effective way to manage extensions in this scenario is to use a combination of OUs and groups.

Create an OU for the shared devices and force-install the shared extensions at this OU level. Then, create separate user groups for FTEs and Contractors in the Google Admin console and force-install their specific extensions to these groups. User group policies have a higher precedence than OU policies, ensuring the correct extensions are available to each user type when they sign in to the shared devices. Option A mentions Group Policy Objects, which are for Windows environments and less relevant in a cloud-managed scenario across potentially different OSes. Option B doesn't address the shared device aspect effectively. Option C is not a managed approach.

NEW QUESTION # 26

An organization uses Chrome Enterprise Core and needs to enforce specific security policies (e.g., disabling extensions, restricting website access) only for employee work-related browsing Personal browsing should remain unrestricted Which approach is most appropriate?

- A. Require a managed browser for work-related browsing, applying the policies to all browser windows
- B. Use a managed browser and set exceptions for personal use in the enterprise policies
- C. Require a managed profile for work-related browsing, applying the policies to only that profile
- D. Use a single managed profile for all users, configuring separate work and personal bookmarks to manage access

Answer: C

The most granular and appropriate approach to apply work-related policies without affecting personal browsing is to use ****managed profiles****. By requiring users to use a specific managed profile for work purposes, administrators can enforce policies only within that profile. Personal browsing in a separate, unmanaged profile will remain unaffected. Option A would apply policies to all browsing, which is not the requirement. Option C relies on bookmarks, which is not a security enforcement mechanism. Option D is generally not feasible as enterprise policies are designed to be enforced, and setting reliable exceptions for personal use within a managed browser is complex and less secure than using separate profiles.
