

Nutanix NCP-DB-6.10 Valid Exam Bootcamp & Valid NCP-DB-6.10 Study Plan

Just the same as the free demo, we have provided three kinds of versions of our NCP-DB-6.10 preparation exam, among which the PDF version is the most popular one. It is understandable that many people give their priority to use paper-based NCP-DB-6.10 Materials rather than learning on computers, and it is quite clear that the PDF version is convenient for our customers to read and print the contents in our NCP-DB-6.10 study guide.

It is quite clear that let the facts speak for themselves is more convincing than any word, therefore, we have prepared free demo in this website for our customers to have a taste of the NCP-DB-6.10 test torrent compiled by our company. You will understand the reason why we are so confident to say that the NCP-DB-6.10 Exam Torrent compiled by our company is the top-notch NCP-DB-6.10 exam torrent for you to prepare for the exam. You can choose to download our free demo at any time as you like, you are always welcome to have a try, and we trust that our NCP-DB-6.10 exam materials will never let you down.

Valid NCP-DB-6.10 Study Plan & Guaranteed NCP-DB-6.10 Questions Answers

If you want to improve your career prospects, obtaining Nutanix Certified Professional - Database Automation (NCP-DB) v6.10, NCP-DB-6.10 exam certificate is a great way for you. Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 certificate will help you land a job in the industry. After passing the Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 you can increase your earning potential. This is because employers are ready to pay more for candidates who have passed the Nutanix NCP-DB-6.10 Certification test. Success in the NCP-DB-6.10 exam can impact your promotion. If you are already an employee you can promote yourself to the highest level after passing the Nutanix NCP-DB-6.10 test.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q175-Q180):

NEW QUESTION # 175

An administrator needs to perform LCM upgrades on an AHV cluster registered with NDB. The cluster hosts NDB-provisioned database server VMs that are part of a database server cluster.

What should the administrator do to allow the DB Server VMs to stay available while the cluster is being upgraded?

- **A. Set VM-Host Affinity**
- B. Remove Nutanix Cluster
- C. Update Nutanix Cluster
- D. Unset VM-Host Affinity

Answer: A

Explanation:

The correct answer is B because setting VM-Host affinity ensures that the DB Server VMs are not migrated to another host during the LCM upgrade process. This way, the DB Server VMs can continue to serve the database requests without interruption. Option A is incorrect because updating the Nutanix cluster does not prevent the DB Server VMs from being moved to another host. Option C is incorrect because removing the Nutanix cluster from NDB will make the DB Server VMs unmanaged by NDB and lose the benefits of NDB features. Option D is incorrect because unsetting VM-Host affinity will allow the DB Server VMs to be migrated to another host during the LCM upgrade process, which may cause downtime or performance degradation.

NEW QUESTION # 176

How should a patch be downloaded to perform a One-Click Upgrade of an NDB Environment with access to the Internet?

- A. Open Prism Central and deploy the current version of NDB from the Apps and Marketplace section.
- **B. Download the patch in the Administrator > Maintenance section of NDB.**
- C. Download the patch from the Nutanix Support Portal and upload via the NDB CLI.
- D. Open Prism Element and use LCM to update the software.

Answer: B

Explanation:

For a One-Click Upgrade of an NDB environment with internet access, the patch should be downloaded directly within the NDB interface. The "Administrator > Maintenance" section of NDB provides an option to connect to the Nutanix download repository (e.g.,

<https://download.nutanix.com>) and download the latest patch or upgrade bundle automatically.

This streamlined process ensures compatibility and simplifies the upgrade workflow. The One-Click Upgrade feature then applies the downloaded patch to update NDB components efficiently.

NEW QUESTION # 177

What is required to create an NDB Software Profile?

- A. Patch file for the installed databases
- **B. Installer package for database software**
- C. Database server VM registered with NDB
- D. OS image registered with Prism Element

Answer: B

Explanation:

An NDB Software Profile is a template of the OS and database engine that you can use to provision or clone database server VMs using NDB. To create a software profile, you need to upload an installer package for the database software that you want to use, such as SQL Server or Oracle. The installer package must be compatible with the OS image that you have registered with Prism Element. You do not need a database server VM registered with NDB, a patch file for the installed databases, or an OS image registered with Prism Element to create a software profile. Those are required for other tasks, such as creating a software profile version, registering a database server VM, or provisioning a database server VM.

NEW QUESTION # 178

An administrator needs to patch a PostgreSQL database server VM from version 13.4 to 13.8.

What is the first step within the NDB patching workflow to accomplish this task?

- A. Create a new Database Parameters profile for PostgreSQL server 13.8.
- B. Create a new Software Profile with PostgreSQL 13.8.
- C. Create a maintenance window and add this PostgreSQL server 13.8 to the queue.
- **D. Create a Software Profile Version with PostgreSQL 13.8.**

Answer: D

Explanation:

NDB supports patching for PostgreSQL database instances. Patching for PostgreSQL is validated on VMs provisioned by NDB (greenfield deployments). To patch PostgreSQL database server VMs, you must create a software profile version by uploading the

PostgreSQL update file in NDB. You can then use the PostgreSQL update to patch other database server VMs or provision a new database server VM with the updated software profile. The first step in the NDB patching workflow is to create a software profile version with the desired PostgreSQL version.

NEW QUESTION # 179

How can an administrator exclude Kernel patches for the Linux OS using the most efficient means?

- A. Define a pre-script to disable the repositories in the Patch Now advanced options
- B. Exclude the appropriate repositories on the VM and reboot prior to patching.
- **C. Exclude the appropriate repositories on the VM prior to patching.**
- D. Define a pre-script to disable the repositories in the Maintenance Window advanced options.

Answer: C

Explanation:

NDB supports Linux OS patching for database server VMs. Linux OS patching is performed by using the yum or apt package managers, depending on the Linux distribution. To exclude Kernel patches for the Linux OS, the administrator can disable or exclude the appropriate repositories on the VM prior to patching. This can be done by editing the yum.conf or apt.conf files, or by using the --disablerepo or --exclude options in the yum or apt commands. This way, the administrator can control which patches are applied to the VM without affecting other VMs or requiring additional scripts or reboots.

NEW QUESTION # 180

.....

Many of the candidates like the Soft version of our NCP-DB-6.10 exam questions. The software of NCP-DB-6.10 guide torrent boosts varied self-learning and self-assessment functions to check the results of the learning. The software can help the learners find the weak links and deal with them. Our NCP-DB-6.10 Exam Questions boost timing function and the function to stimulate the exam. Our product sets the timer to stimulate the exam to adjust the speed and keep alert. So it is worthy for you to buy our NCP-DB-6.10 exam questions.
