## Microsoft Dynamics 365 Business Central Developer Sample Questions (Q119-Q124):

### NEW QUESTION # 119

A developer creates a profile for part-time shop supervisors and adds customizations.

You plan to add new requirements to the profile.

You need to analyze the code to understand the profile and make sure there are no errors.

```

01 profile "Part Time Shop Supervisor"
02 {
03     Description = 'This profile is for Part time Shop Supervisors';
04     Caption = 'Part Time Shop Supervisor';
05     RoleCenter = "Shop Supervisor Role Center";
06     Enabled = true;
07     Promoted = true;
08     Customizations = Customization1;
09 }
10 pagecustomization Customization1 customizes "Item List"
11 {
12     layout
13     {
14         modify("Profile")
15         {
16             visible = false;
17         }
18         moveafter("Unit Cost"; "Costing Method")
19     }
20 }

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
 NOTE: Each correct selection is worth one point.

Statement	Yes	No
The Part Time Shop Supervisor profile will be applied only to users with "Register Time" = true on User Setup.	<input type="radio"/>	<input type="radio"/>
Variables, procedures, and triggers cannot be added on page customization objects.	<input type="radio"/>	<input type="radio"/>
Line 10 should use extends instead of customizes.	<input type="radio"/>	<input type="radio"/>
In line 18, "Unit Cost" will be moved after "Costing Method".	<input type="radio"/>	<input type="radio"/>

**Answer:**

**Explanation:**

Statement	Yes	No
The Part Time Shop Supervisor profile will be applied only to users with "Register Time" = true on User Setup.	<input type="radio"/>	<input checked="" type="radio"/>
Variables, procedures, and triggers cannot be added on page customization objects.	<input checked="" type="radio"/>	<input type="radio"/>
Line 10 should use extends instead of customizes.	<input type="radio"/>	<input checked="" type="radio"/>
In line 18, "Unit Cost" will be moved after "Costing Method".	<input checked="" type="radio"/>	<input type="radio"/>

**Explanation:**

The Part Time Shop Supervisor profile will be applied only to users with "Register Time" = true on User Setup: No  
 Variables, procedures, and triggers cannot be added on page customization objects: Yes  
 Line 10 should use extends instead of customizes: No  
 In line 18, "Unit Cost" will be moved after "Costing Method": Yes  
 The Part Time Shop Supervisor profile will be applied only to users with "Register Time" = true on User Setup.

\* No

\* The code doesn't contain any reference to the User Setup table or the Register Time field, so this is not correct. Profiles are not applied conditionally based on fields like this.

Variables, procedures, and triggers cannot be added on page customization objects.

\* Yes

\* Page customization objects are meant for UI modifications, such as moving or hiding fields. You cannot add variables, procedures, or triggers in a page customization object.

Line 10 should use extends instead of customizes.

\* No

\* In AL, when customizing a page within a profile, you use customizes rather than extends. Extends is used when modifying base application objects, but customizes is used to customize pages within a profile.

In line 18, "Unit Cost" will be moved after "Costing Method".

\* Yes

\* The code in line 18 is correct. The moveafter directive will move the "Unit Cost" field after the "Costing Method" field on the page layout.

**NEW QUESTION # 120**

You have a custom app.

A warning for the rule code named AAOXYZ appears in multiple app objects.

You need to change the severity of the rule from Warning to Info for only the current app.

Which three actions should you perform? Each correct answer presents part of the solution. Choose three.

NOTE: Each correct selection is worth one point.

- A. Open the Visual Studio Code project settings.json file.
- B. Add the following ruleset object to the ruleset.json file:

```
{  
  "id": "AAOXYZ",  
  "action": "Info"  
}
```

To the "rules" array.

- C. Add the "al.ruleSetPath" property with a path to the ruleset.json file.
- D. Add the following ruleset object to the ruleset.json file:

```
{  
  "id": "AAOXYZ",  
  "action": "Hidden"  
}
```

To the "rules" array.

- E. Change the "al.enableCodeAnalysis" property value to "false".
- F. Open the Visual Studio Code user settings.json file.

**Answer: C,F**

**NEW QUESTION # 121**

You create a codeunit that works with a table named Boxes. You plan to filter the records and then modify them.

You get an error that you do not have permission to work with the Boxes table.

You need to assign the Indirect permissions for the Boxes table to the codeunit.

Which four code blocks should you use in sequence to assign the correct permission? To answer, move the appropriate code blocks from the list of code blocks to the answer area and arrange them in the correct order.

**Code blocks**

RPX
"Boxes" =
Table
Permissions =
"Boxes"
RM
rm
TableData

**Assigning permissions**

Microsoft passteeking.com

**Answer:**

**Explanation:**

**Code blocks**

RPX
"Boxes" =
Table
Permissions =
"Boxes"
RM
rm
TableData

**Assigning permissions**

TableData
"Boxes" =
Permissions =
RM

Microsoft passteeking.com

**Explanation:**

To assign the indirect permissions for the Boxes table to the codeunit, use the following code blocks in sequence:

- \* TableData
- \* "Boxes" =
- \* Permissions

**\* RIM**

Assigning permissions: In Business Central, to assign permissions within a codeunit, you need to specify the table that the permissions apply to, followed by the type of permission. The sequence starts by indicating that we are defining table data permissions (TableData). Then, we specify the table in question ("Boxes" ⇒).

After that, we state that we are setting permissions (Permissions). Finally, we assign the RIM permissions, which stands for Read, Insert, and Modify permissions. The Indirect permission allows the codeunit to read, insert, and modify records in the Boxes table indirectly, meaning these operations can be performed by the codeunit when it is called by a user who has direct permissions for these operations.

**NEW QUESTION # 122**

**NEW QUESTION # 123**

You need to use a query data type to retrieve required data.

How should you complete the code? To answer, select the appropriate options in the answer area.

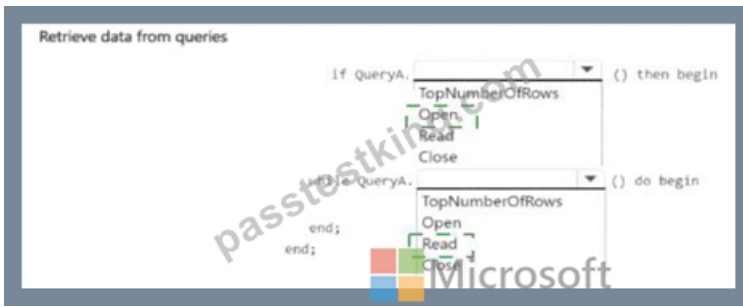

NOTE: Each correct selection is worth one point.

Retrieve data from queries

```
if QueryA. ( ) then begin
    TopNumberOfRows
    Open
    Read
    Close
end
while QueryA. ( ) do begin
    TopNumberOfRows
    Open
    Read
    Close
end;
```

**Answer:**

Explanation:

Explanation:

You are retrieving data using a query data type. The following code snippet needs to be completed:

- \* If QueryA...: The correct option here is Open. This opens the query and prepares it for data retrieval.
- \* While QueryA...: The correct option here is Read. This reads through the query results one row at a time.
- \* If QueryA...: Open
- \* While QueryA...: Read
