

Oracle 1z1-076 Reliable Practice Questions & Exam 1z1-076 Simulator Free

Oracle 1Z0-076 Exam Prep Made Easy: The Benefits of Using Practice Tests

DOWNLOAD the newest Exam4Labs 1z1-076 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1XOLDhnjRWAwiHu4PxUBrlMP9dg3f35ZO>

Our 1z1-076 learning guide materials have won the favor of many customers by virtue of their high quality. Started when the user needs to pass the qualification test, choose the 1z1-076 real questions, they will not have any second or even third backup options, because they will be the first choice of our practice exam materials. Our 1z1-076 Practice Guide is devoted to research on which methods are used to enable users to pass the test faster. Therefore, through our unremitting efforts, our 1z1-076 real questions have a pass rate of 98% to 100%.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 2	<ul style="list-style-type: none">Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 3	<ul style="list-style-type: none">Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 4	<ul style="list-style-type: none">Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 5	<ul style="list-style-type: none">Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 6	<ul style="list-style-type: none">Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 7	<ul style="list-style-type: none">Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.

Using 1z1-076 Reliable Practice Questions, Pass The Oracle Database 19c: Data Guard Administration

For 1z1-076 test dumps, we give you free demo for you to try, so that you can have a deeper understanding of what you are going to buy. The pass rate is 98%, and we also pass guarantee and money back guarantee if you fail to pass it. 1z1-076 test dumps of us contain questions and answers, and it will help you to have an adequate practice. Besides we have free update for one year for you, therefore you can get the latest version in the following year if you buying 1z1-076 Exam Dumps of us. Buying them, and you will benefit from them in the next year.

Oracle Database 19c: Data Guard Administration Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which two are prerequisites for configuring Transaction Guard in a Data Guard environment?

- A. Create a database service with COMMIT_OUTCOME set to TRUE, and ensure clients use that service to connect to the database instance.
- B. Set INSTANCE_NAME identically on all the Data Guard Configuration databases and modify the local service name on the client to include a CONNECTION_LIST containing all the standby hosts.
- C. Grant execute permission on the DBMS_APP_CONT package to relevant database schema owners.
- D. Ensure that connection descriptors for database clients use the failover clause with the COMMIT_OUTCOME parameter set to TRUE.
- E. Create a database service with COMMIT_OUTCOME set to TRUE and ensure that the service is statically registered with the default listener on the primary host.

Answer: A,C

NEW QUESTION # 32

Examine the following parameter settings of the physical standby database:

* STANDBY_FILE_MANAGEMENT=AUTO
* ENABLED_PDBS_ON_STANDBY=<null>

During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Creating a PDB from the existing PDB within the same CDB
- B. Adding or dropping a redo file group
- C. Adding a data file or creating a tablespace
- D. Renaming a data file in the primary database
- E. Performing transportable tablespaces

Answer: A,C

Explanation:

When STANDBY_FILE_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:

* Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.
* Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB.

* Oracle Data Guard Concepts and Administration Guide

NEW QUESTION # 33

Your Data Guard environment has two remote physical standby databases.

Client applications use the local naming method to define connectivity to the primary database instance.

Which will automatically redirect clients to the new primary database in case of a switchover or failover?

- A. Set the DB_NAME parameter identically on all databases; modify the connection descriptor on the clients to use DB_NAME to connect to the primary database instance.
- B. Set the LOCAL_LISTENER parameter for all the database instances, to register services with the default listener on the primary database host.
- C. Create a database service on the standby databases; automate the start of the service after a role change, and modify the connection descriptor on the clients to use that service.
- D. Configure a PRIMARY role service on the Primary and Standby and modify the Client connect descriptor to include both the Primary and the Standby.

Answer: C

NEW QUESTION # 34

Which FOUR database parameters might be affected by or influence the creation of standby databases?

- A. STANDBY_ARCHIVE_DEST
- B. FALSESERVER
- C. ARCHIVE_LAG_TARGET
- D. COMPATIBLE
- E. db_file_name_convert
- F. DB_NAME

Answer: A,D,E,F

Explanation:

- * DB_NAME (A): The name of the database, which should remain consistent across the primary and standby databases.
- * db_file_name_convert (C): This parameter helps define the mapping of data file names from the primary to the standby database, which is crucial during the creation and operation of a standby database.
- * COMPATIBLE (D): The compatibility level can influence the features that can be used on the standby database and must be consistent with or higher than that of the primary database, especially after upgrades.
- * STANDBY_ARCHIVE_DEST (F): This parameter specifies the destination of archived redo log files on the standby database, which is important for log transport and apply services.

NEW QUESTION # 35

You created the PRODSBY1 physical standby database for the PROD primary database using gqr and RMAN.

You are planning to create a Data Guard Broker configuration. You execute the command:

Which three statements are true regarding the execution of the command?

- A. The command will execute successfully only if the DG_BROKER_START initialization parameter is set to TRUE for the PROD database instance.
- B. The Data Guard Broker configuration files are automatically created in the destinations specified by the DG_BROKER_CONFIG_FILEn initialization parameters on the primary database.
- C. The command will execute successfully only if Oracle Net connectivity to the PROD and PRODSBY1 database instances are defined on the primary host.
- D. The PRODSBY1 standby database is automatically added to the configuration if DG_BROKER_START is TRUE for PRODSBY1.
- E. The command will execute successfully only if Oracle Net connectivity to the PROD database instance is defined on the primary host.
- F. The PRODSBY1 standby database is automatically added to the configuration if Oracle Net connectivity to the PRODSBY1 database instance is defined on the primary host.

Answer: A,B,E

Explanation:

The command executed (CREATE CONFIGURATION 'DGConfig' AS PRIMARY DATABASE IS 'PROD' CONNECT IDENTIFIER IS PROD;) is used to create a Data Guard Broker configuration named 'DGConfig'. The successful execution of this command depends on several conditions:

* A: The DG_BROKER_START parameter must be set to TRUE on the primary database to start the Data Guard Broker processes. Without the broker processes running, the configuration cannot be created.

* D: Oracle Net connectivity to the PROD database instance must be established on the primary host. This is because the Data Guard Broker requires network accessibility to communicate with the primary database and manage the configuration.

* E: When the configuration is created, the Data Guard Broker configuration files are indeed automatically created in the locations specified by the DG_BROKER_CONFIG_FILEn parameters on the primary database.

It's important to note that the command will not automatically add the PRODSBY1 standby database to the configuration (thus B and C are not correct), and there is no requirement for the standby database to have Oracle Net connectivity defined on the primary host for the execution of this command (making F incorrect as well).

References: This information can be validated in Oracle's Data Guard Broker documentation, which outlines the requirements for setting up and managing a Data Guard configuration using the Data Guard Broker.

NEW QUESTION # 36

Our 1z1-076 exam dumps are required because people want to get succeed in IT field by clearing the certification exam. Passing 1z1-076 practice exam is not so easy and need to spend much time to prepare the training materials, that's the reason that so many people need professional advice for 1z1-076 Exam Prep. The 1z1-076 dumps pdf are the best guide for them passing test.
