

# ACP-120関連試験、ACP-120ミシュレーション問題

無料でクラウドストレージから最新のGoShiken ACP-120 PDFダンプをダウンロードする：[https://drive.google.com/open?id=1mdl2tNkooJj\\_cE-4kfCawCB-5KtLmEb](https://drive.google.com/open?id=1mdl2tNkooJj_cE-4kfCawCB-5KtLmEb)

当社GoShikenの製品は、実践と記憶に値する専門知識の蓄積です。一緒に参加して、お客様のニーズに合わせてACP-120ガイドクイズの成功に貢献する多くの専門家がいます。仕事に取り掛かって顧客とやり取りする前に厳密に訓練された責任ある忍耐強いスタッフ。ACP-120試験の準備の質を実践し、経験すると、それらの保守性と有用性を思い出すでしょう。ACP-120練習教材が試験受験者の98%以上が夢の証明書を取得するのに役立つ理由を説明しています。あなたもそれを手に入れることができると信じてください。

ATLASSIANのACP-120（Jira Cloud Administrator）試験は、Jira Cloudの管理におけるスキルと知識を検証したいプロフェッショナル向けに設計されています。Jiraは、さまざまな業界の組織でプロジェクトを計画、追跡、管理するために使用される人気のあるプロジェクト管理ツールです。Jira Cloudの管理者として、組織のニーズに合わせてJiraを設定およびカスタマイズし、ユーザーと権限を管理し、システムのスムーズな機能を確保する責任があります。

## ATLASSIAN ACP-120 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"><li>• System Administration: This domain is for Jira Cloud Administrators and focuses on managing overall system settings. It includes changing the look and feel of Jira, setting up default dashboards, enabling time tracking, linking apps, configuring statuses and priorities, and handling system backups and data imports. Admins must also understand how these settings affect the entire instance</li></ul>
トピック 2	<ul style="list-style-type: none"><li>• Access, Permissions, Security: This section of the exam measures the skills of Jira Cloud Administrators and covers how to manage user access at different levels like organization, projects, and issues. It includes understanding admin roles, assigning permissions, managing global and project permissions, and setting issue-level security. Admins need to know how these permissions connect across Jira's structure and how to handle both team-managed and company-managed project setups.</li></ul>
トピック 3	<ul style="list-style-type: none"><li>• Notifications: This part evaluates the skills of Project Admins in managing notifications in Jira. It covers how to set up notification schemes, customize events in workflows, and configure notifications in both project types. Understanding how user settings impact notifications and how to troubleshoot email handlers is also essential.</li></ul>
トピック 4	<ul style="list-style-type: none"><li>• Advanced User Features: This section measures the expertise of Jira Cloud Administrators in using advanced Jira features like JQL (Jira Query Language) to create complex filters, dashboards, and subscriptions. It also includes performing bulk operations and understanding the implications of editing multiple issues at once, such as sending notifications or changing workflow statuses.</li></ul>

- General Project Configuration: This part evaluates the abilities of Project Admins and focuses on creating and setting up projects. It includes selecting project types and templates, configuring project details like names and keys, managing versions of work, and using components to assign tasks automatically. Understanding when to use team-managed or company-managed projects is key here.

ACP-120ガイドの質問は、多くの利点とさまざまな機能を後押しします。購入前にACP-120試験問題を無料でダウンロードして試用することができます。購入手続きは簡単に迅速です。ACP-120試験問題を数分で受け取ることができます。選択できる3つのバージョンがあります。ACP-120試験の急流を学び、試験の準備をする時間はほとんど必要ありません。合格率とヒット率は非常に高いです。ACP-120試験に合格すると、大企業に入社して賃金を2倍にするなど、多くのメリットが得られます。

**ATLASSIAN Jira Cloud Administrator 認定 ACP-120 試験問題 (Q67-Q72):****質問 # 67**

Your Jira cloud instance has hundreds of projects which are used only by the development team at your organization.

All projects share a single permission scheme New business requirements state:

- \* Customer support staff at your organization need to view all issues in all projects
- \* They also need to share filters with other users
- \* They should not be granted too much access

Identify the appropriate way to configure customer support staff in Jira (Choose one)

- A. As a security level
- B. As a new group
- C. With the Trusted role
- D. As a new project role
- E. With an approved domain

正解: A

**質問 # 68**

One of your teams has noticed a spelling mistake in the name of an issue type.

What should you do before correcting the name of the issue type?

- A. Warn users that saved filters using the issue type will not be able to find the issue type after the change.
- B. Update the workflow schemes for the issue type to use the new name.
- C. Update the issue type schemes to refer to the new name.
- D. Warn users that dashboard gadgets that refer to the issue type in their configuration will need to be updated with the corrected name.

正解: C

解説:

Reference: <https://confluence.atlassian.com/adminjiracloud/adding-editing-and-deleting-an-issue-type-scheme-844500754.html>

**質問 # 69**

Gary complains that he is not getting any notifications when issues are updated.

According to the notification helper, he should receive notifications for all issues he is watching. His coworkers confirm they receive those notifications and they regularly update issues that he is watching.

Which update to Gary's personal settings must have occurred (Choose one)

- A. The setting You make changes to the issue was disabled

- B. The setting You're watching the issue was disabled
- C. The setting Watch your issues was disabled
- D. The setting Email notifications format was changed

正解: B

#### 質問 # 70

Currently, all users in your instance can see all issues in the BRAVO company-managed project. You received these new requirements:

- \* Some BRAVO issues should only be visible to managers.
- \* Some BRAVO issues should only be visible to supervisors.
- \* The remaining BRAVO issues should remain visible to all users. Identify two elements that must be configured. (Choose two.)

- A. Administer Projects permission
- B. Set Issue Security permission
- C. Global permissions
- D. Issue security scheme
- E. Browse Projects permission

正解: B、D

解説:

To meet the requirements of restricting visibility of some BRAVO issues to managers, others to supervisors, and keeping the remaining issues visible to all users, you need to configure an issue security scheme to define security levels and the Set Issue Security permission to allow users to apply these levels. These two elements are critical for implementing issue-level security in a company-managed project.

\* Explanation of the Correct Answers:

\* Issue security scheme (Option A):

An issue security scheme defines security levels that restrict who can view issues based on criteria such as users, groups, or roles.

To meet the requirements, you need to create at least three security levels: one for managers, one for supervisors, and one (or none, for default visibility) for all users. The scheme is then applied to the BRAVO project to enforce these visibility rules.

\* Exact Extract from Documentation:

Configure issue security schemes

Issue security schemes define security levels to restrict who can view issues. Each level specifies users, groups, or roles (e.g., managers, supervisors) who can see issues assigned to that level.

To create a scheme:

\* Go to Settings > Issues > Issue security schemes.

\* Create a new scheme and add security levels (e.g., "Managers Only," "Supervisors Only," "All Users").

\* Assign the scheme to a project in Project settings > Issue security. Note: Security levels override the Browse Projects permission for restricted issues. (Source:

Atlassian Support Documentation, "Configure issue security schemes")

\* Why This Fits: The issue security scheme is necessary to create security levels that restrict visibility to managers, supervisors, or all users, addressing all three requirements.

\* Set Issue Security permission (Option B):

The Set Issue Security permission allows users to select a security level for an issue (via the Security Level field). Without this permission, users cannot assign issues to the "Managers Only" or "Supervisors Only" security levels, which is necessary to implement the restricted visibility requirements. This permission must be granted to appropriate users (e.g., project admins or specific roles) in the project's permission scheme.

\* Exact Extract from Documentation:

Set Issue Security permission

The Set Issue Security permission allows users to set or change the security level of an issue, determining who can view it. This permission is granted via the project's permission scheme.

To configure:

\* Go to Project settings > Permissions.

\* Add users, groups, or roles (e.g., Administrators) to the Set Issue Security permission.

Note: Without this permission, users cannot assign issues to specific security levels, even if a scheme is configured. (Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

\* Why This Fits: The Set Issue Security permission is required to enable users to apply the security levels defined in the issue security scheme, ensuring that issues can be restricted to managers or supervisors as needed.

\* Why Other Options Are Incorrect:

\* Global permissions (Option C):

\* Global permissions (e.g., Administer Jira, Create Projects) control system-wide actions, not project-specific visibility. Issue visibility is managed by project-level permissions and security schemes, not global permissions.

\* Extract from Documentation:

Global permissions control system-wide actions, such as administering Jira or sharing filters. Issue visibility is managed by project permissions and issue security schemes.

(Source: Atlassian Support Documentation, "Manage global permissions")

\* Browse Projects permission (Option D):

\* The Browse Projects permission allows users to view issues in a project. While all users currently have this permission (since they can see all BRAVO issues), modifying it does not address the need to restrict specific issues to managers or supervisors. Issue security schemes override Browse Projects for restricted issues.

\* Extract from Documentation:

The Browse Projects permission allows users to view issues in a project, but issue security levels can further restrict visibility for specific issues.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

\* Administer Projects permission (Option E):

\* The Administer Projects permission allows users to manage project settings, such as components or permission schemes. While it may be needed to configure the issue security scheme or permissions, it is not directly required to meet the visibility requirements.

\* Extract from Documentation:

The Administer Projects permission allows managing project settings but is not required to set issue security levels or view restricted issues.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

\* Additional Notes:

\* To implement the requirements, create an issue security scheme with three levels:

\* "Managers Only" (e.g., restricted to a "Managers" group).

\* "Supervisors Only" (e.g., restricted to a "Supervisors" group).

\* "All Users" (or no security level, allowing Browse Projects to apply).

\* Assign the scheme to the BRAVO project and grant the Set Issue Security permission to users who need to assign these levels (e.g., project admins).

\* The configuration requires Jira administrator privileges to create the scheme, but project admins can manage security levels within the project.

## 質問 # 71

Your organization has two Cloud sites. You will use the "Import Jira Cloud" feature to migrate from one Jira site to the other. What can you not import?

- A. Team-managed projects
- B. Automation rules
- C. Custom fields
- **D. Deleted issues**
- E. Attachments

正解: D

解説:

The Import Jira Cloud feature allows migration of data between Jira Cloud sites, including projects, issues, configurations, and attachments. However, deleted issues (Option C) cannot be imported, as they are not included in standard Jira Cloud backups or export data.

\* Explanation of the Correct Answer (Option C):

\* Deleted issues are permanently removed from Jira Cloud and are not included in backups or export files created for migration.

The Import Jira Cloud feature only imports data that exists in the source site's backup, which excludes issues that have been deleted.

\* Exact Extract from Documentation:

Import Jira Cloud data

The Import Jira Cloud feature allows migration of data between Jira Cloud sites, including:

\* Projects (company-managed and team-managed).

\* Issues, comments, and attachments.

- \* Configurations (e.g., custom fields, workflows, automation rules). Limitations:
- \* Deleted issues are not included in backups or exports and cannot be imported. To import:
- \* Create a backup from the source site in Settings > System > Backup manager.
- \* Use Settings > System > Import Jira Cloud on the target site. Note: Requires Jira administrator permissions and may involve Atlassian support for full migrations. (Source: Atlassian Support Documentation, "Import data to Jira Cloud")
- \* Why This Fits: Deleted issues are not part of the data exported from the source site, making them impossible to import, so Option C is the correct answer.
- \* Why Other Options Are Incorrect:
- \* Automation rules (Option A):
- \* Automation rules are included in Jira Cloud backups and can be imported to the target site using the Import Jira Cloud feature, provided they are compatible with the target site's configuration.
- \* Extract from Documentation:
- Automation rules are included in Jira Cloud backups and can be imported, though some rules may require reconfiguration if dependencies (e.g., custom fields) differ. (Source: Atlassian Support Documentation, "Import data to Jira Cloud")
- \* Custom fields (Option B):
- \* Custom fields are part of the configuration data in a Jira Cloud backup and are imported to the target site. Their contexts and options are preserved during migration.
- \* Extract from Documentation:
- Custom fields, including their configurations and contexts, are included in backups and imported to the target site. (Source: Atlassian Support Documentation, "Import data to Jira Cloud")
- \* Team-managed projects (Option D):
- \* Team-managed projects are fully supported in Jira Cloud backups and can be imported to the target site, including their issues, configurations, and settings.
- \* Extract from Documentation:
- Both company-managed and team-managed projects are included in Jira Cloud backups and can be imported to another site. (Source: Atlassian Support Documentation, "Import data to Jira Cloud")
- \* Attachments (Option E):
- \* Attachments (media files) are included in Jira Cloud backups and can be imported to the target site, provided the backup includes media data.
- \* Extract from Documentation:
- Attachments are included in Jira Cloud backups and imported to the target site if media import is enabled. (Source: Atlassian Support Documentation, "Import data to Jira Cloud")
- \* Additional Notes:
- \* The Import Jira Cloud feature is accessed via Settings > System > Import Jira Cloud and typically requires Jira administrator privileges, with possible Atlassian support for full migrations.
- \* Deleted issues are permanently removed and cannot be recovered unless a backup from before deletion is available, but even then, they are not part of standard exports.
- \* Other data (e.g., automation rules, custom fields) may require post-import reconfiguration if there are incompatibilities between sites.
