It focuses on optimizing performance, resolving issues, and ensuring data security in data visualization environments.

SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q37-Q42):

NEW QUESTION # 37

You input new data for a private version in a story. What must you do to ensure the new data is added to the model?

- A. Save
- B. Send
- C. Nothing
- D. Publish

Answer: D

Explanation:

When inputting new data for a private version in a story in SAP Analytics Cloud, it is necessary to "Publish" the data to ensure it is added to the model. Publishing the private version commits the changes to the underlying model, making the new data visible and accessible to other users according to their permissions. This step is crucial for ensuring that the updated data is incorporated into the shared model for further analysis and decision-making.

NEW QUESTION # 38

You have a dataset that extracts data from an SAP Business Warehouse (SAP BW) system. The data in the SAP BW system changes. How can you update the dataset?

- A. You can schedule the dataset to update on a regular basis.
- B. You must create a new dataset.
- C. You must manually reimport the data.
- D. You must refresh the story that uses the dataset.

Answer: A

Explanation:

For datasets that extract data from external systems like SAP Business Warehouse (SAP BW), SAP Analytics Cloud provides the capability to schedule updates on a regular basis. This feature ensures that the dataset within SAP Analytics Cloud remains up-to-date with the latest changes from the SAP BW system, without the need for manual reimport or creating a new dataset. Scheduled updates can be configured to run at specific intervals, automating the data refresh process.

NEW QUESTION # 39

You have a live data model with two dimensions: Firstname and Lastname. Users want a single dimension in the data model that displays the dimensions as Lastname, Firstname. What must you do?

- A. Create the combined data in the source system.
- B. Create a calculated dimension in the story.
- C. **Create a calculated dimension in the data model.**
- D. Group the Firstname and Lastname in the data model.

Answer: C

Explanation:

To combine two dimensions, Firstname and Lastname, into a single dimension displaying as Lastname, Firstname in a live data model, you should create a calculated dimension in the data model. This calculated dimension will concatenate the two fields into one, according to the specified format. This approach allows for the creation of a new dimension that can be used across various reports and analyses within the model, maintaining the integrity of the original dimensions.
