### NEW QUESTION # 28

Which two of the following tasks are not suitable for Pega Robotic Automation? (Choose Two)

- **A. Rarely occurring processes such as sending annual reports.**
- B. Processes that require access to multiple windows or applications.
- **C. Complex processes that require human decision management.**
- D. Repetitive tasks that require manual work.
- E. Rules-driven processes that users cannot easily perform in Pega Platform.

**Answer: A,C**

Explanation:

Comprehensive and Detailed Explanation from Pega Robotics System (Exact Extract & Context):

According to the Pega Robotics Automation Design and Implementation Guide:

"Robotic Automation is best suited for rule-based, repetitive, and structured tasks that do not require subjective judgment or complex decision-making." The guide further clarifies:

"Tasks that involve human decision-making, subjective evaluation, or business judgment are not suitable for automation through RPA, as these require contextual understanding and cognitive reasoning." It also specifies:

"Processes that occur infrequently, such as quarterly or annual events, are not ideal candidates for automation due to low execution frequency and limited ROI from automation development and maintenance." Therefore:

\* Option A: Complex processes that require human decision management - # Not suitable, as they depend on human reasoning.

\* Option D: Rarely occurring processes such as sending annual reports - # Not suitable, since they do not provide sufficient automation value or frequency.

\* Options B, C, and E describe processes that are well-suited for Pega Robotics (they are repetitive, multi-application, or rules-driven).
