

Salesforce Analytics-Admn-201덤프공부, Analytics-Admn-201퍼펙트공부자료

2025 DumpTOP 최신 Analytics-Admn-201 PDF 버전 시험 문제집과 Analytics-Admn-201 시험 문제 및 답변 무료 공유:
<https://drive.google.com/open?id=1xgf3OgFvj-Wruq3vo-hCDy9SmUG9Qugc>

Salesforce인증 Analytics-Admn-201시험은 IT인증시험중 가장 인기있는 시험입니다. Salesforce인증 Analytics-Admn-201시험패스는 모든 IT인사들의 로망입니다. DumpTOP의 완벽한 Salesforce인증 Analytics-Admn-201덤프로 시험준비하여 고득점으로 자격증을 따보세요.

Salesforce Analytics-Admn-201 시험요강:

주제	소개
주제 1	• Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
주제 2	• Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.

주제 3	Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
주제 4	Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
주제 5	Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.

Salesforce Analytics-Admn-201 덤프구매전 한국어 온라인상담서비스부터 구매후 덤프 무료 업데이트버전제공 , Salesforce Analytics-Admn-201시험불합격시 덤프비용 전액환불 혹은 다른 과목으로 교환 등 저희는 구매전부터 구매후까지 철저한 서비스를 제공해드립니다. Salesforce Analytics-Admn-201 덤프는 인기덤프인데 지금까지 덤프를 구매한후 환불신청하신 분은 아직 없었습니다.

최신 Salesforce Administrator Analytics-Admn-201 무료샘플문제 (Q46-Q51):

질문 # 46

Your deployment of Tableau Server uses Active Directory authentication. What statement correctly describes the process of importing a group from Active Directory?

- A. You can change the name of a group during import, although this will not change the group's name in Active Directory
- B. New users created as a result of importing a group are assigned the site role specified during the import
- C. Importing a group from Active Directory requires a .csv file that lists user IDs
- D. If an imported group contains any users that have Tableau Server accounts, their site role will be changed to match the site role specified during the import

정답: B

설명:

Importing an AD group into Tableau Server syncs user management-let's analyze the process and options:

* AD Group Import Process:

* How: In the UI (Users > Groups > Add Group > Active Directory), enter the AD group name, set a site role, and sync.

* Behavior:

* Existing Users: If a user is already in Tableau Server, their site role remains unchanged unless manually adjusted-sync applies the minimum role only if it upgrades access.

* New Users: Added to Tableau with the site role specified during import.

* Config: Requires AD authentication enabled in TSM.

* Option D (New users created are assigned the site role specified during import): Correct.

- * Details: When importing (e.g., "SalesTeam" group, site role: Explorer):
- * New users get Explorer.
- * Existing users keep their role unless it's below Explorer (e.g., Unlicensed # Explorer).
- * Why: Ensures consistent onboarding-new users align with the group's intended access.
- * Option A (Existing users' roles change to match import): Incorrect.
- * Why: Existing roles persist unless lower than the minimum-e.g., Viewer stays Viewer if import sets Explorer, but Unlicensed upgrades. Not a full overwrite.
- * Option B (Requires a .csv file): Incorrect.
- * Why: AD import uses live sync via LDAP-no .csv needed (that's for local auth imports).
- * Option C (Change group name during import): Incorrect.
- * Why: The AD group name is fixed-you can't rename it in Tableau during sync (it mirrors AD).

Post-import renaming is possible but not part of the process.

Why This Matters: Accurate AD sync ensures seamless user management-missteps can disrupt access or licensing.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

질문 # 47

What process decides when a Repository failover is required?

- A. Backgrounder
- B. Gateway
- C. Coordination Service
- D. Cluster Controller

정답: D

설명:

In a high-availability (HA) Tableau Server setup, the Repository (PostgreSQL) has an active and passive instance. Failover occurs if the active Repository fails. Let's dive into the process:

- * HA Setup:
- * Two Repository instances across nodes (active/passive).
- * Failover switches to the passive instance if the active one becomes unavailable (e.g., crash, network issue).
- * Cluster Controller:
- * Role: Monitors all processes (e.g., Repository, File Store) across nodes, detecting failures via heartbeats and status checks.
- * Failover Decision: If the active Repository stops responding, Cluster Controller initiates failover, promoting the passive instance to active.
- * Coordination: Works with Coordination Service (ZooKeeper) to update topology but makes the initial detection call.
- * Option A (Cluster Controller): Correct.
- * Why: It's the watchdog process, constantly monitoring Repository health and triggering failover when needed.
- * Option B (Coordination Service): Incorrect.
- * Role: ZooKeeper maintains cluster state and coordinates topology updates post-failover, but doesn't detect the failure-Cluster Controller does.
- * Option C (Gateway): Incorrect.
- * Role: Routes client requests-unrelated to internal process monitoring or failover.
- * Option D (Backgrounder): Incorrect.
- * Role: Executes background tasks-no involvement in Repository failover decisions.

Why This Matters: Understanding failover ensures HA reliability-Cluster Controller is the linchpin for resilience.

Reference: Tableau Server Documentation - "High Availability" (<https://help.tableau.com/current/server/en-us/ha.htm>).

질문 # 48

Which two statements are advantages of published data sources in comparison to embedded data sources?
(Choose two.)

- A. Drivers are automatically installed on each client's machine
- B. Centralized data management is easier
- C. Storage space is conserved and resource usage during data refreshes is optimized
- D. Data is protected so that it is only available in one workbook

정답: B,C

설명:

In Tableau, data sources can be embedded (stored within a workbook) or published (stored separately on Tableau Server). Let's define these and analyze the advantages:

- * Embedded Data Source: The connection details and any extract are bundled in the .twb or .twbx file.

Each workbook manages its own copy.

- * Published Data Source: The connection or extract is hosted on Tableau Server, reusable across multiple workbooks.

Now, let's evaluate the options:

- * Option C (Centralized data management is easier): Correct. Published data sources allow:

- * Single source of truth: One data source can serve multiple workbooks, ensuring consistency.

- * Unified updates: Refresh schedules, permissions, and metadata (e.g., calculated fields) are managed in one place via the Server UI.

- * Governance: Administrators can control access and monitor usage centrally. In contrast, embedded data sources require individual updates per workbook, leading to duplication and management overhead.

- * Option D (Storage space is conserved and resource usage during data refreshes is optimized):

Correct. With published data sources:

- * Storage: A single extract on the Server (e.g., a .hyper file) is shared across workbooks, avoiding redundant copies stored in each embedded workbook.

- * Refreshes: One refresh job updates the shared extract, reducing CPU and memory usage compared to multiple refreshes for duplicate embedded extracts. Embedded data sources replicate extracts, increasing disk space and refresh load.

- * Option A (Data is protected so that it is only available in one workbook): Incorrect. This describes embedded data sources, not published ones. Published data sources are shared, not restricted to one workbook-permissions control access, not exclusivity.

- * Option B (Drivers are automatically installed on each client's machine): Incorrect. Drivers (e.g., for SQL Server, PostgreSQL) must be installed on the Server hosting the published data source, not client machines. This is unrelated to the published vs. embedded distinction.

Why This Matters: Published data sources enhance scalability and efficiency in enterprise deployments, making them a cornerstone of Tableau Server's data strategy.

Reference: Tableau Server Documentation - "Published Data Sources" (https://help.tableau.com/current/server/en-us/datasource_publish.htm).

질문 # 49

What file format should you use to register Tableau Server from the command line?

- A. XML
- **B. JSON**
- C. HTTP
- D. YML

정답: B

설명:

Registering Tableau Server from the command line involves providing configuration details (e.g., identity store, license) via the tsm register command. Let's explore this fully:

- * Registration Process:

- * Run during initial setup or to update settings (e.g., after changing AD/LDAP config).

- * Uses a configuration file to pass parameters to TSM.

- * Command: `tsm register --file <path-to-file>`.

- * File Format:

- * Tableau Server uses JSON for configuration files in TSM commands like `tsm register`.

- * Example:

```
json
CollapseWrapCopy
{
  "identityStore": {
    "type": "local",
    "domain": "example.com"
  }
}
```

- * JSON is structured, machine-readable, and aligns with Tableau's modern CLI design.

- * Option C (JSON): Correct.

- * Official format for tsm register, per documentation and practical use.
- * Option A (YML): Incorrect.
- * While tabsvc.yml exists internally, it's not for registration-tsm register uses JSON.
- * Option B (XML): Incorrect.
- * Older Tableau configs used XML (e.g., workgroup.yml pre-TSM), but TSM standardized on JSON.
- * Option D (HTTP): Incorrect.
- * HTTP is a protocol, not a file format-irrelevant here.

Why This Matters: Correct file format ensures seamless registration, avoiding CLI errors in setup or migrations.
 Reference: Tableau Server Documentation - "tsm register" (https://help.tableau.com/current/server/en-us/cli_register.htm).

질문 # 50

Which two commands are valid and complete commands? (Choose two.)

- A. tsm maintenance ziplogs
- B. tsm maintenance restore
- C. tsm maintenance cleanup
- D. tsm maintenance backup

정답: A,C

설명:

TSM commands manage Tableau Server maintenance-let's validate their syntax:

- * Command Requirements:
- * Some need arguments (e.g., file paths); others are standalone.
- * Valid and Complete: Must work as-is without errors.
- * Option C (tsm maintenance cleanup): Correct.
- * Details: Removes temporary files and old logs-no arguments required (optional flags like -l exist).
- * Use: tsm maintenance cleanup-runs fully.
- * Option D (tsm maintenance ziplogs): Correct.
- * Details: Creates a zip of logs (e.g., tsm-logs.zip)-no arguments needed (optional -d for date range).
- * Use: tsm maintenance ziplogs-complete and valid.
- * Option A (tsm maintenance backup): Incorrect.
- * Why: Requires -f <filename>.tsbak (e.g., tsm maintenance backup -f backup.tsbak)-incomplete without it.
- * Option B (tsm maintenance restore): Incorrect.
- * Why: Needs -f <filename>.tsbak (e.g., tsm maintenance restore -f backup.tsbak)-not standalone.

Why This Matters: Correct syntax ensures maintenance tasks execute without errors-critical for server health.

Reference: Tableau Server Documentation - "TSM Maintenance Commands" (https://help.tableau.com/current/server/en-us/cli_maintenance_tsm.htm).

질문 # 51

.....

현재 경쟁율이 심한 IT시대에, Salesforce Analytics-Admn-201 자격증 취득만으로 이 경쟁이 심한 사회에서 자신만의 위치를 보장할 수 있고 더욱이는 한층 업된 삶을 누릴 수 있을 수도 있습니다. 우리 DumpTOP 에서 여러분은 Salesforce Analytics-Admn-201 관련 학습 지도서를 얻을 수 있습니다. 우리 DumpTOP 는 IT 업계 엘리트 한 강사들이 퍼펙트한 Salesforce Analytics-Admn-201 문제집을 만들어서 제공합니다. 우리가 제공하는 Salesforce Analytics-Admn-201 문제와 답으로 여러분은 한번에 성공적으로 시험을 패스 하실 수 있습니다. 중요한 것 저희 문제집을 선택함으로 여러분의 시간도 절약해드리고 무엇보다도 많은 근심없이 심플하게 시험을 패스하여 좋다는 점입니다.
