## 最新的 Oracle Cloud 1z0-1093-25 免費考試真題 (Q72-Q77):

### 問題 #72

Which two requirements must be met before you can create an Exadata Database Service VM Cluster?

- A. A configured Exadata Cloud@Customer infrastructure.
- B. An Exadata Infrastructure resource must be created first.**
- C. A valid support identifier (SI) associated with the OCI account.
- D. A Virtual Cloud Network (VCN) with necessary subnets for client access and backups.**
- E. A configured Oracle Cloud Infrastructure (OCI) Vault and Key.

答案: B,D

解題說明:

\* B. VCN and Subnets: Exadata Database Service VM Clusters require a VCN to provide network connectivity for database instances, client access, and backups. Proper subnets are essential for this network setup.

\* E. Exadata Infrastructure Resource: Before creating a VM Cluster, an Exadata Infrastructure resource must be provisioned. The VM Cluster resides within this infrastructure.

Why the other options are incorrect:

\* A: OCI Vault and Key are used for encryption but not mandatory for VM Cluster creation.

\* C: A valid SI is needed for support but not a technical requirement for VM cluster creation.

\* D: Exadata Cloud@Customer is a separate service from Exadata Database Service.

### 問題 #73

Which of the following statements accurately describes the recommended procedure for patching Grid Infrastructure in a BaseDB VM system where the database is NOT managed by Oracle Cloud Infrastructure (OCI)?

- A. Apply the database patch first, then apply the Grid Infrastructure patch to ensure compatibility.
- B. Apply the Grid Infrastructure patch first, then apply the database patch, after validating the GI is working correctly.**
- C. You cannot manually patch Grid Infrastructure in a BaseDB VM system; Oracle Cloud Infrastructure manages all patching operations.
- D. Apply the Grid Infrastructure patch directly to the DB system. OCI handles the patching order for all components automatically.

答案: B

解題說明:

Recommended Patching Order:

In Oracle environments, it is crucial to patch Grid Infrastructure (GI) first because GI components are responsible for managing cluster resources and storage. Applying GI patches before database patches ensures that the underlying infrastructure is compatible and

stable.

\* After the GI patching, validate the environment to ensure all components are functioning correctly before proceeding with database software updates.

\* This order minimizes the risk of downtime or compatibility issues.

Why the other options are incorrect:

\* A: OCI does not automatically handle manual patching in non-managed DB systems.

\* B: Applying the database patch first may result in compatibility problems.

\* D: Users can manually patch Grid Infrastructure in BaseDB VMs.

#### 問題 #74

During the provisioning of a Base Database Service (BaseDB) virtual machine (VM), what is the significance of the "Compute Shape" selection?

- A. It specifies the pre-installed database software version.
- B. It determines the maximum number of databases that can be created on the VM.
- C. It dictates the availability domain in which the VM will be created.
- **D. It defines the CPU, memory, and network bandwidth allocated to the VM.**

答案: D

解題說明:

C: Defines CPU, memory, and network bandwidth:

\* The Compute Shape specifies the resources allocated to the VM.

\* Shapes vary in the number of OCPUs, amount of RAM, and network performance.

\* Selecting an appropriate shape ensures the database has enough computational power and memory to meet workload demands.

Why the other options are incorrect:

\* A. Number of databases: Limited by storage and resource capacity, not the shape itself.

\* B. Availability domain: Chosen separately during provisioning.

\* D. Pre-installed software version: The shape does not determine the database version.

#### 問題 #75

What is the primary purpose of the AutoML feature within MySQL HeatWave?

- A. To automatically back up and restore the MySQL database to Oracle Cloud Infrastructure Object Storage.
- B. To automatically generate SQL queries based on natural language input.
- **C. To automate the process of building, training, and deploying machine learning models directly within the database.**
- D. To automatically generate data visualization to present database insights.
- E. To automatically tune the MySQL server parameters for optimal transactional performance.

答案: C

解題說明:

AutoML in MySQL HeatWave:

The AutoML feature in MySQL HeatWave integrates machine learning capabilities directly within the database, allowing users to:

\* Build, train, and deploy models without moving data to external systems.

\* Automate the entire ML pipeline, including data preprocessing, model selection, and hyperparameter tuning.

\* This makes it easier for data engineers and analysts to perform predictive analytics without requiring data science expertise.

Why the other options are incorrect:

\* A: AutoML does not focus on server tuning; it focuses on machine learning.

\* C: Generating SQL queries from natural language is not within AutoML's scope.

\* D: AutoML is unrelated to database backup.

\* E: Visualization is not the primary function; it focuses on model building.

#### 問題 #76

Which statement accurately describes the patching process for Oracle Grid Infrastructure (GI) and ASM components on a BaseDB VM system when using user-managed patching?

- A. The DBA must manually download the GI and ASM patch bundles and apply them using the appropriate patching tools.
- B. GI and ASM patching is integrated with the database patching process and is automatically handled when the database is patched.
- C. Patching GI and ASM components is only required when the operating system of the VM is upgraded.
- D. GI and ASM patching is fully automated by Oracle Cloud Infrastructure and requires no user intervention.

答案： A

解題說明：

B: Manual patching for GI and ASM:

\* In user-managed environment, the DBA is responsible for downloading and applying patches for Grid Infrastructure (GI) and Automatic Storage Management (ASM).

\* These patches are distinct from database patches and need to be applied using tools like opatch or Oracle Universal Installer (OUI).

\* The process involves:

\* Downloading the patch from Oracle Support.

\* Staging the patch on the server.

\* Applying the patch using the appropriate commands.

Why the other options are incorrect:

\* A. Fully automated by OCI: OCI does not automatically patch GI and ASM in user-managed environments.

\* C. Integrated with database patching: GI and ASM patching is handled separately.

\* D. Required only during OS upgrade: Incorrect, as patching is required independently for security and stability.
