トピック	出題範囲
トピック 1	<ul style="list-style-type: none">• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
トピック 2	<ul style="list-style-type: none">• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.
トピック 3	<ul style="list-style-type: none">• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite 認定 C_ACDET_2506 試験問題 (Q54-Q59):

質問 # 54

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.
- **B. Subsequent migration activities follow Bluefield deployment scenario.**
- C. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.
- D. Subsequent migration activities will require a complete reconfiguration of existing solutions.

正解: B

解説:

In SAP Ariba deployments, when a full Greenfield baseline has been applied initially—meaning a fresh, full suite setup on the Test site—and the customer deploys a single solution (like Sourcing) to Production first, all subsequent deployments follow a Bluefield scenario. This means that later stages of deployment (e.g., Contracts, Supplier Risk) involve selective migration and incremental configuration changes to Production without rebuilding everything from scratch. Bluefield scenarios specifically accommodate environments where Production may already be live with transactions, requiring careful selective migration to avoid disruption. This contrasts with Brownfield, which typically involves upgrading or reusing existing deployments without full baseline resets. Also, Greenfield deployments do not require all suite components to migrate simultaneously; phased deployments are supported. This approach ensures minimal risk during deployment and provides flexibility to roll out additional modules progressively. Extract summary: SAP Ariba documentation highlights Bluefield for phased, incremental deployments post Greenfield baseline application to accommodate live production environments.

質問 # 55
