New C-SIGDA-2403 Exam Preparation | Reliable C-SIGDA-2403 Exam Braindumps

It is our company that can provide you with special and individual service which includes our C-SIGDA-2403 preparation quiz and good after-sale services. Our experts will check whether there is an update every day, so you needn't worry about the accuracy of C-SIGDA-2403 Study Materials. If there is an update system, we will send them to the customer automatically. As is known to all, our C-SIGDA-2403 simulating materials are high pass-rate in this field, that's why we are so famous.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q57-Q62):

NEW QUESTION # 57
How do you filter all published processes in the workspace?

- A. Type the word "Publishing state" in the search field and press Enter.
- B. Switch to Advanced Search, and select the field "Publishing date".
- C. Switch to Advanced Search, and select the field "Publishing state".
- D. Type the word "Publish" in the Search field and press Enter.

Answer: C

NEW QUESTION # 58
What does the so-called Best Run Score in plug and gain by SAP Signavio indicate?

- A. The efficiency of processes based on SAP recommendations
- B. The number of cases that have completed the process in time
- C. The size of the data backlog in the ERP system
- D. The extent of process automation in the ERP system

Answer: A

NEW QUESTION # 59
Which Widgets can visualize process flows by backtracking the performed events?Note: There are 3correct answers to this question.

- A. Process Discovery
- B. Variant Explorer
- C. Process Conformance
- D. Breakdown
- E. Relate

Answer: A,B,C

Explanation:
Widgets in SAP Signavio that are capable of visualizing process flows by backtracking performed events include Process Conformance, Process Discovery, and Variant Explorer. These widgets provide insights into how processes are actually executed within an organization, identifying deviations from the intended process model, discovering the real process flow, and analyzing different variations of a process. Specifically:
* Option A (Process Conformance):This widget compares the actual execution of processes against the predefined model to identify compliance and deviations. It helps organizations ensure that processes are performed as designed and identify areas where the actual process diverges from the model.
* Option B (Process Discovery):Process Discovery automatically generates a process model based on
* event logs, showing how processes are actually performed. It helps in understanding the real process flow and identifying potential improvements.
* Option C (Variant Explorer):Variant Explorer analyzes different variations of a process, showing how certain cases follow different paths through the process. It's valuable for understanding the diversity in process execution and pinpointing common or unusual process flows.

NEW QUESTION # 60
What features does the SQL Query Editor offer? Note: There are 2 correct answers to this question.

- A. Avoids manipulation of process data

- B. Provides custom functions
- C. Creates inner joins
- D. Queries data from multiple tables

Answer: A,B

Explanation:
The SQL Query Editor in SAP Signavio Process Intelligence allows users to write custom queries to analyze process data. The documentation details its capabilities:
* Exact Extract:"The SQL Query Editor in SAP Signavio Process Intelligence provides:
* Protection against data manipulation by restricting queries to read-only operations.
* Support for custom functions to perform advanced calculations or data transformations within queries." (SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor Features").
* Explanation:
* Option B (Avoids manipulation of process data):The SQL Query Editor is designed to ensure data integrity by allowing only read-only queries, preventing accidental or unauthorized changes to the underlying process data.
* Option D (Provides custom functions):Users can define custom functions within the SQL Query Editor to perform specific calculations or transformations, such as aggregating data in unique ways or applying complex logic.
* Option A (Queries data from multiple tables)is incorrect because, while the editor can query data, it typically operates on a single event log or case attributes table within an investigation, not multiple unrelated tables.
* Option C (Creates inner joins)is incorrect as inner joins are not a primary feature of the SQL Query Editor in Process Intelligence, which focuses on querying pre-structured process data.
