

주제 2	<ul style="list-style-type: none"> <li>• Cyberthreat Protection Services: This domain targets Cybersecurity Analysts and covers broad cybersecurity fundamentals and advanced threat protection capabilities. Candidates must know about malware protection, intrusion prevention systems, command and control channel detection, deception technologies, identity threat detection and response, browser isolation, and incident detection and response.   Data Protection Services</li> </ul>
주제 3	<ul style="list-style-type: none"> <li>• Access Control Services: This area assesses Security Operations Specialists on implementing access control mechanisms including cloud app control, URL filtering, file type controls, bandwidth controls, and segmentation. It also covers Microsoft 365 policies, private application access strategies, and firewall configurations to protect enterprise resources.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>• Risk Management: This domain measures skills of Risk Managers and Security Architects in using Zscaler's comprehensive risk management suite. Candidates are expected to understand risk capabilities, dashboards, asset and financial risk insights, vulnerability management, deception tactics, identity protection, and breach prediction analytics.</li> </ul>
주제 5	<ul style="list-style-type: none"> <li>• This section assesses Data Protection Officers on techniques to secure data across motion, SaaS, cloud, and endpoints using Zscaler's AI-driven data discovery and data protection technologies. It involves securing BYOD environments and understanding risk management to protect sensitive information.</li> </ul>
주제 6	<ul style="list-style-type: none"> <li>• Connectivity Services: This domain evaluates Network Security Engineers on configuring and managing connectivity essentials like device posture assessment, trusted network definitions, browser access controls, and TLS</li> <li>• SSL inspection deployment. It also includes applying policy frameworks focused on authentication and enforcement for internet access, private access, and digital experience.</li> </ul>

## ZDTA퍼펙트 덤프데모, ZDTA퍼펙트 덤프데모문제 다운

Zscaler ZDTA시험을 어떻게 패스할가 고민그만하시고 Itcertkr의Zscaler ZDTA시험대비덤프를 데려가 주세요. 가격이 착한데 비해 너무나 훌륭한 덤프품질과 높은 적중율은 Itcertkr가 아닌 다른곳에서 찾아볼수 없는 혜택입니다. Zscaler ZDTA 덤프구매전 데모부터 다운받아 공부해보세요.

## 최신 Digital Transformation Administrator ZDTA 무료샘플문제 (Q60-Q65):

### 질문 # 60

How does Zscaler Risk360 quantify risk?

- A. A risk score is computed based on the number of remediations needed compared to the industry peer average.
- B. The number of risk events is totaled by location and combined.
- C. A risk score is computed for each of the four stages of breach.
- D. Time to mitigate each identified risk is totaled, averaged, and tracked to show ongoing trends.

정답: C

### 설명:

Zscaler Risk360 quantifies risk by computing a risk score that is based on the number of remediations needed in comparison to the industry peer average. This approach allows organizations to understand their relative security posture by evaluating how many issues require remediation and benchmarking that against peers in the industry. This methodology enables prioritized risk management and provides context around the urgency and scale of remediation activities necessary to reduce risk.

Unlike simply counting risk events or focusing on time to mitigate, Risk360 uses this comparative remediation-based scoring to give a comprehensive view of risk. It does not compute separate scores for each of the four breach stages but rather aggregates remediation efforts and benchmarks them to industry standards.

This is confirmed by the study guide's explanation of Risk360's scoring method, highlighting the use of remediation counts compared to peers as the basis for risk scoring.

### 질문 # 61

An administrator would like users to be able to use the corporate instance of a SaaS application. Which of the following allows an administrator to make that distinction?

- A. URL filtering with SSL inspection
- **B. Cloud application control**
- C. Out-of-band CASB
- D. Endpoint DLP

정답: B

설명:

Cloud application control is the feature that allows an administrator to distinguish and enforce policies specifically on the corporate instance of a SaaS application. This enables granular control, allowing users to access the approved corporate SaaS while restricting access to personal or unauthorized instances. Out-of-band CASB generally provides visibility but does not enforce real-time distinctions in this context. URL filtering with SSL inspection and Endpoint DLP serve different purposes, such as content inspection and endpoint data protection, respectively.

The study guide explains that Cloud Application Control policies identify and enforce controls based on SaaS application instances, providing precise policy enforcement aligned with corporate SaaS usage requirements.

### 질문 # 62

Can Notifications, based on Alert Rules, be sent with methods other than email?

- A. Email is the only method for notifications as that is universally applicable and no other way of sending them makes sense.
- **B. In addition to email, text messages can be sent directly to one cell phone to alert the CISO who is then coordinating the work on the incident.**
- C. In addition to email, notifications, based on Alert Rules, can be shared with leading ITSM or UCAAS tools over Webhooks.
- D. Leading ITSM systems can be connected to the Zero Trust Exchange using a NSS server, which will then connect to ITSM tools and forwards the alert.

정답: B

설명:

Beyond email, Alert Rule notifications can be pushed via Webhooks to integrate with ITSM platforms or UCaaS tools, enabling real-time incident management and collaboration in your existing service desks or messaging systems.

### 질문 # 63

Cross-Site Scripting (XSS) attacks are a type of injection, in which malicious scripts are injected into otherwise benign and trusted websites. XSS includes which of the following?

- A. Anonymizers
- B. IRC Tunneling
- C. Spyware Callback
- **D. Cookie Stealing**

정답: D

설명:

Cross-Site Scripting enables attackers to run malicious JavaScript in a user's browser - often used to steal session cookies and hijack user sessions, a technique known as cookie stealing.

### 질문 # 64

Which Zscaler feature detects whether an intruder is accessing your internal resources?

- A. SSL Decryption Bypass

- B. SandBox
- C. Deception
- D. Browser Isolation

정답: C

설명:

The Deception feature in Zscaler detects intruders attempting to access internal resources by deploying deceptive assets or traps that identify unauthorized or suspicious activity. This proactive approach to threat detection helps identify attackers who have bypassed other defenses.

## 질문 # 65

.....

Zscaler 인증 ZDTA 시험의 자격증은 여러분에 많은 도움이 되리라 믿습니다. 하시는 일에서 한층 더 업그레이드 될 것이고 생활에서도 분명히 많은 도움이 될 것입니다. 자격증 취득 즉 재산을 얻었죠. Zscaler 인증 ZDTA 시험은 여러분이 IT 지식 테스트 시험입니다. Itcertkr에서는 여러분의 편리를 위하여 Itcertkr만의 최고의 최신의 Zscaler ZDTA 덤프를 추천합니다. Itcertkr를 선택은 여러분이 최고의 선택입니다. Itcertkr는 제일 전면적인 Zscaler ZDTA 인증 시험 자료의 문제와 답을 가지고 있습니다.
