AD0-E724 Latest Material - 100% Pass 2026 First-grade Adobe AD0-E724 Reliable Dumps Questions

These Adobe AD0-E724 exam questions give you an idea about the final Adobe AD0-E724 exam questions formats, exam question structures, and best possible answers, and you will also enhance your exam time management skills. Finally, at the end of Adobe AD0-E724 Exam Practice test you will be ready to pass the final Adobe AD0-E724 exam easily. Best of luck in Adobe Adobe exam and professional career!!!

Adobe Commerce Developer Professional Sample Questions (Q87-Q92):

NEW QUESTION # 87

What is one purpose of a customer data JS library?

- A. It stores the customer's username and password for easier frontend login.
- B. It stores the customers credit card info for usage in the checkout.
- C. It stores private customer data in local storage

Answer: C

Explanation:

The customer data JS library is used to store private customer data in local storage. This data can be used to improve the customer's experience on the store, such as by remembering their shipping address or their preferred payment method. The customer data JS library in Adobe Commerce is used for managing customer data on the client side, such as the shopping cart, comparison list, and wishlist. It does not store sensitive information like credit card details or usernames and passwords. Instead, it utilizes local storage to keep a private data section where customer-specific data is stored securely and accessed via JavaScript, making option B correct.

NEW QUESTION # 88

For security reasons, merchant requested to a developer to change default admin url to a unique url for every branch/environment of their Adobe Commerce Cloud project.

Which CLI command would the developer use update the admin url?

- A. `bin/magento adminurl:set <admin_url>`
- B. `ece-tools variable:update ADMIN_URL`
- C. `magento-cloud variable:set ADMIN_URL`

Answer: C

Explanation:

The CLI command that the developer would use to update the admin url is `magento-cloud variable:set ADMIN_URL`. This command sets an environment variable called `ADMIN_URL` with a custom value for the admin url on a specific environment. Environment variables are configuration settings that affect the behavior of the Adobe Commerce Cloud application and services. By setting an environment variable for `ADMIN_URL`, the developer can change the default admin url to a unique url for every branch/environment of their Adobe Commerce Cloud project. NEW QUESTION # 89

In a new release of a module, a developer decides to rename a table that was defined in the earlier versions.

Which action, if any, allows the developer to prevent data loss?

- A. Define `onCreate="migrateDataFromAnotherTable(old_table_name)"` attribute in the table tag.
- B. Declarative schema supports `RENAME TABLE`, so the data will be migrated to the new table automatically.
- C. Define the table and columns mapping in the `db.schema_whitelist.json`

Answer: C

Explanation:

When renaming a table in Magento, to prevent data loss, the developer must define the table and its columns mapping in the `db_schema_whitelist.json` file. This declarative schema approach ensures that the data migration tool knows about the changes and can migrate data from the old table to the newly named table without losing any data.

NEW QUESTION # 90

A developer wants to deploy a new release to the Adobe Commerce Cloud Staging environment, but first they need the latest code from Production.

What would the developer do to update the Staging environment?

- A. 1. Log in to the Project Web Interface.
2. Choose the Staging environment, and click Sync
- B. 1. Log in to the Project Web Interface.
2. Choose the Staging environment, and click Merge
- C. 1. Checkout to Production environment
2. Use the `magento-cloud synchronize <environment-ID>` Commerce CLI Command

Answer: A

Explanation:

The developer can update the Staging environment with the latest code from Production by logging in to the Project Web Interface, choosing the Staging environment, and clicking Sync. This will synchronize the code, data, and media files from Production to Staging, creating an exact copy of Production on Staging. The developer can then deploy the new release to Staging and test it

before pushing it to Production. Verified References: [Magento 2.4 DevDocs]

NEW QUESTION # 91

An Adobe Commerce developer is working on a custom gallery extension.

The module uses the `Magento\Catalog\Model\ImageUploader` class for image uploading. The admin controller for custom image uploads is `Vendor\CustomGallery\Controller\Adminhtml\Image\Upload`.

The images need to be stored in different `basePath` and `baseTmpPath` than the default ones.

How can the default imageuploader class be extended and used without affecting the other modules that are already using it?

- A.

1. Configure the `basePath` and `baseTmpPath` Of `Magento\Catalog\Model\ImageUploader`.
2. Inject the type `Magento\Catalog\Model\ImageUploader` into admin controller:

```
<type name="Magento\Catalog\Model\ImageUploader">
  <arguments>
    <argument name="baseTmpPath" xsi:type="string">customgallery/tmp/images</argument>
    <argument name="basePath" xsi:type="string">customgallery/images</argument>
  </arguments>
</type>

<type name="Vendor\CustomGallery\Controller\Adminhtml\Image\Upload">
  <arguments>
    <argument name="imageUploader" xsi:type="object">
      Magento\Catalog\Model\ImageUploader
    </argument>
  </arguments>
</type>
```

- B.

1. Create a Virtual Type and configure the `basePath` and `baseTmpPath`.
2. Add virtual type `Vendor\CustomGallery\GalleryImageUpload` as a preference for `Magento\Catalog\Model\ImageUploader`:

```
<virtualType
  name="Vendor\CustomGallery\GalleryImageUpload"
  type="Magento\Catalog\Model\ImageUploader">
  <arguments>
    <argument name="baseTmpPath" xsi:type="string">customgallery/tmp/images</argument>
    <argument name="basePath" xsi:type="string">customgallery/images</argument>
  </arguments>
</virtualType>

<preference
  for="Magento\Catalog\Model\ImageUploader"
  type="Vendor\CustomGallery\GalleryImageUpload"
/>
```

- C.

1. Create a Virtual Type and configure the `basePath` and `baseTmpPath`.
2. Inject the virtual type `Vendor\CustomGallery\GalleryImageUpload` into admin controller:

```
<virtualType
  name="Vendor\CustomGallery\GalleryImageUpload"
  type="Magento\Catalog\Model\ImageUploader"
>
  <arguments>
    <argument name="baseTmpPath" xsi:type="string">customgallery/tmp/images</argument>
    <argument name="basePath" xsi:type="string">customgallery/images</argument>
  </arguments>
</virtualType>

<type name="Vendor\CustomGallery\Controller\Adminhtml\Image\Upload">
  <arguments>
    <argument name="imageUploader" xsi:type="object">
      Vendor\CustomGallery\GalleryImageUpload
    </argument>
  </arguments>
</type>
```

Answer: C

Explanation:

To extend the `Magento\Catalog\Model\ImageUploader` class and configure it with custom `basePath` and `baseTmpPath` without affecting other modules that utilize this class, the best approach is to use a Virtual Type

. Virtual types allow you to create a customized version of a class for a specific context without altering the original class or its usage

elsewhere.

Option A is correct for the following reasons:

* Creating a Virtual Type: By defining a virtual type (Vendor\CustomGallery\Gallery\ImageUpload) in the di.xml, you create a custom version of the ImageUploader class. This virtual type can have unique configurations for basePath and baseTmpPath, which are specific to the custom gallery module.

* Explanation: Virtual types are particularly useful in Magento when you need to use a slightly modified version of an existing class in a specific context. In this case, the virtual type allows you to define custom paths without altering the base ImageUploader class, ensuring that other modules using ImageUploader are unaffected.

NEW QUESTION # 92

.....

Our AD0-E724 learning materials will aim at helping every people fight for the AD0-E724 certificate and help develop new skills. If we want to survive in this competitive world, we need a comprehensive development plan to adapt to the requirement of modern enterprises. We sincerely recommend our AD0-E724 Preparation exam for our years' dedication and quality assurance will give you a helping hand. You can just free download the free demo of our AD0-E724 study materials to know how excellent our AD0-E724 exam questions are.
