Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q44-Q49):

NEW QUESTION # 44

A Kubernetes controller automatically adds another pod replica to the resource pool in response to increased application load.

- A. Down
- B. Horizontal
- C. Diagonal
- D. Vertical

Answer: B

Explanation:

Horizontal Scaling (Scale Out): This involves adding more instances (replicas/nodes) of a resource to handle increased load. In a Kubernetes or Runtime Fabric context, when the controller adds another "pod replica," it is strictly defined as horizontal scaling. Vertical Scaling (Scale Up): This would involve increasing the size (CPU or RAM capacity) of an existing single instance/pod, rather than adding more copies of it.

Context: MuleSoft's Runtime Fabric (RTF) runs on Kubernetes and leverages this horizontal auto-scaling capability to maintain performance under high traffic.

NEW QUESTION # 45

According to MuleSoft's recommended REST conventions, which HTTP method should an API use to specify how API clients can request data from a specified resource?

- A. POST
- B. PATCH
- C. GET
- D. PUT

Answer: C

Explanation:

HTTP GET: The GET method is used to retrieve (read) a representation of a resource. It is safe and idempotent, meaning it does not alter the state of the server.

Usage: If you want to "request data" (e.g., Get Customer Details), GET is the standard method.

Why others are incorrect:

POST: Used to create a new resource.

PUT: Used to replace (update) an entire resource.

PATCH: Used to partially update a resource.

NEW QUESTION # 46

According to MuleSoft, what action should an IT organization take regarding its technology assets in order to close the IT delivery gap?

- A. Create weekly meetings that all members of IT attend to present justification and request approval to use existing assets
- B. Hire additional staff to meet the demand for asset creation required for approved projects and timelines
- C. Focus project delivery efforts on custom assets that meet the specific requirements of each individual line of business
- **D. Make assets easily discoverable via a central repository**

Answer: D

Explanation:

The Key to Speed: You cannot close the delivery gap by working harder (hiring more staff) or by creating custom code for every project (custom assets). You must leverage Reuse.

Discoverability is Critical: Reuse is impossible if developers don't know that an asset exists.

Anypoint Exchange: By publishing assets (APIs, connectors, fragments) to a central repository (Exchange) and making them searchable and documented, organizations enable "Self-Service." Developers can find what they need instantly, drastically reducing the time to deliver new projects.

NEW QUESTION # 47

Which Anypoint Platform component helps integration developers discover and share reusable APIs, connectors, and templates?

- **A. Anypoint Exchange**
- B. API Manager
- C. Anypoint Studio
- D. Design Center

Answer: A

Explanation:

Anypoint Exchange: This is the "marketplace" or central repository of the Anypoint Platform141414.

Discovery & Reuse: Its primary purpose is to allow developers to publish their assets (APIs, Connectors, Templates) so that other developers can find ("discover") and reuse them. This drives the efficiency of the API-led connectivity model15.

Why others are incorrect:

Anypoint Studio: The IDE for building applications16.

API Manager: For governing and securing running APIs17.

Design Center: For designing API specifications and flows18.

NEW QUESTION # 48

According to MuleSoft, which major benefit does a Center for Enablement (C4E) provide for an enterprise and its lines of business?

- **A. Accelerating self-service by the lines of business**
- B. Centrally managing return on investment (ROI) reporting from lines of business to leadership
- C. Centralizing project management across the lines of business
- D. Enabling Edge security between the lines of business and public devices

Answer: A

Explanation:

Center for Enablement (C4E): Unlike a Center of Excellence (CoE) which centralizes work, a C4E focuses on enablement.

Self-Service: The primary goal is to harvest reusable assets and best practices so that the Lines of Business (LOB) can build their own projects using these assets. This accelerates self-service and removes Central IT as the bottleneck13.

Why others are incorrect:

Centralizing Project Management (D): C4E promotes decentralized delivery (federation), not centralized management.
