It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.</li> </ul>

## SAP Certified Associate - Security Administrator Sample Questions (Q23-Q28):

### NEW QUESTION # 23

For users with system administration authorization, which additional functions are provided by the SAP Easy Access menu? Note: There are 2 correct answers to this question.

- A. Calling menus for roles and assigning them to users
- B. Creating users
- C. Creating roles
- D. Calling programs

**Answer: B,C**

Explanation:

In SAP systems, users with system administration authorization have access to additional functions in the SAP Easy Access menu to manage system security and user administration. The menu includes options for creating roles, allowing administrators to use transaction PFCG to define and maintain authorization roles, which are critical for assigning permissions to users based on their job functions. Additionally, the menu provides access to creating users, enabling administrators to use transaction SU01 to set up user master records, including user IDs, passwords, and role assignments. These functions are essential for managing access control and ensuring system security. Calling menus for roles and assigning them to users is not a specific function of the Easy Access menu, as role assignment is typically performed within SU01 or PFCG.

Calling programs is a general user function, not exclusive to administrators. These administrative capabilities in the Easy Access menu streamline security management tasks in SAP environments.

### NEW QUESTION # 24

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- A. Adjust role restrictions to account for missing authorizations
- B. Adjust role restrictions to further limit access when performing forensic analysis
- C. Display business roles granting specific access
- D. Analyze authorization check results for already assigned authorizations
- E. Analyze authorization check results for missing authorizations

**Answer: C,D,E**

### NEW QUESTION # 25

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2 correct answers to this question.

- A. Administrator
- B. Employee

- C. Employer
- D. User

**Answer: B,D**

Explanation:

In the SAP S/4HANA Business User Concept, the entities that share data with Business Partners are User and Employee. The User entity represents the technical user account in the system, defined in user master records, and is linked to Business Partners to associate system access with business roles and authorizations. The Employee entity represents the human resource data of an individual, such as their organizational assignment or job role, and is synchronized with Business Partners to ensure that user access aligns with their employment details. This integration ensures that Business Partners, which serve as a central entity for managing business relationships, have consistent data for access control and business processes. The Employer entity is not directly linked to Business Partners, as it represents the organization, not an individual.

Similarly, Administrator is a role or user type, not an entity sharing data with Business Partners. This data-sharing mechanism supports seamless identity and access management, enhancing security and operational alignment in SAP S/4HANA systems.

#### **NEW QUESTION # 26**

Following an upgrade of your SAP S/4HANA on-premise system to a higher release, you perform a Modification Comparison using SU25.

What does this comparison do?

- A. It compares your changes to the SAP defaults in USOBX\_C and USOBT\_C with the new SAP defaults in the current release and allows you to make adjustments.
- B. It compares the Role Maintenance data from the previous release with the data for the current release and writes any new default values in tables USOBX\_C and USOBT\_C.
- C. It compares the Role Maintenance data from the current release with the data for the previous release and allows you to adjust any custom default values in tables USOBX and USOBT.
- D. It compares your changes to the SAP defaults in USOBX and USOBT with the new SAP defaults in the current release and allows you to make adjustments.

**Answer: D**

#### **NEW QUESTION # 27**

Which of the following services does the Identity Authentication Service provide? Note: There are 2 correct answers to this question.

- A. Policy refinement
- B. Central User Repository
- C. Authentication
- D. Single Sign-On

**Answer: C,D**

Explanation:

The SAP Identity Authentication Service provides Authentication and Single Sign-On (SSO) services.

Authentication verifies user identities by validating credentials, such as usernames and passwords, or integrating with external identity providers, ensuring secure access to SAP cloud applications. Single Sign-On enables users to access multiple SAP and non-SAP systems with a single set of credentials, streamlining user experience and reducing authentication overhead while maintaining security. These services are core to the Identity Authentication Service's role in SAP's cloud ecosystem, supporting secure and efficient access management. Policy refinement is not a function of this service, as it focuses on policy enforcement rather than creation. A Central User Repository is typically managed by other systems, like SAP Cloud Identity Services, not the Identity Authentication Service. By offering Authentication and SSO, the service ensures robust identity verification and seamless access across cloud-based SAP solutions, aligning with modern security standards and enhancing user productivity.

#### **NEW QUESTION # 28**

.....

All questions on our C\_SEC\_2405 exam questions are strictly in accordance with the knowledge points on newest test syllabus.

Also, our experts are capable of predating the difficult knowledge parts of the C\_SEC\_2405 exam according to the test syllabus. We have tried our best to simply the difficult questions of our C\_SEC\_2405 Practice Engine to be understood by the customers all over the world. No matter the students, office staffs, even someone who know nothing about this subject can totally study it without difficulty.
