SPLK-4001 valid dumps, SPLK-4001 test exam, SPLK-4001 real braindump

A lot of things can't be tried before buying or the product trail will charge a certain fee, but our SPLK-4001 exam questions are very different, you can try it free before you buy it. It's like buying clothes, you only know if it is right for you when you try it on. In the same way, in order to really think about our customers, we offer a free trial version of our SPLK-4001 study prep for you, so everyone has the opportunity to experience a free trial version of our SPLK-4001 learning materials.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q23-Q28):

NEW QUESTION # 23

Where does the Splunk distribution of the OpenTelemetry Collector store the configuration files on Linux machines by default?

- A. /opt/splunk/
- B. /etc/system/default/
- C. /etc/opentelemetry/
- D. /etc/otel/collector/

Answer: D

Explanation:

Explanation

The correct answer is B. /etc/otel/collector/

According to the web search results, the Splunk distribution of the OpenTelemetry Collector stores the configuration files on Linux machines in the /etc/otel/collector/ directory by default. You can verify this by looking at the first result1, which explains how to install the Collector for Linux manually. It also provides the locations of the default configuration file, the agent configuration file, and the gateway configuration file.

To learn more about how to install and configure the Splunk distribution of the OpenTelemetry Collector, you can refer to this documentation².

1: <https://docs.splunk.com/Observability/gdi/opentelemetry/install-linux-manual.html> 2:

<https://docs.splunk.com/Observability/gdi/opentelemetry.html>

NEW QUESTION # 24

For a high-resolution metric, what is the highest possible native resolution of the metric?

- A. 5 seconds
- B. 15 seconds
- C. 1 second
- D. 2 seconds

Answer: C

Explanation:

The correct answer is C. 1 second.

According to the Splunk Test Blueprint - O11y Cloud Metrics User document¹, one of the metrics concepts that is covered in the exam is data resolution and rollups. Data resolution refers to the granularity of the metric data points, and rollups are the process of aggregating data points over time to reduce the amount of data stored.

The Splunk O11y Cloud Certified Metrics User Track document² states that one of the recommended courses for preparing for the exam is Introduction to Splunk Infrastructure Monitoring, which covers the basics of metrics monitoring and visualization.

In the Introduction to Splunk Infrastructure Monitoring course, there is a section on Data Resolution and Rollups, which explains that Splunk Observability Cloud collects high-resolution metrics at 1-second intervals by default, and then applies rollups to reduce the data volume over time. The document also provides a table that shows the different rollup intervals and retention periods for different resolutions.

Therefore, based on these documents, we can conclude that for a high-resolution metric, the highest possible native resolution of the metric is 1 second.

NEW QUESTION # 25

What Pod conditions does the Analyzer panel in Kubernetes Navigator monitor? (select all that apply)

- A. Not Scheduled
- B. Failed
- C. Pending
- D. Unknown

Answer: A,B,C,D

Explanation:

Explanation

The Pod conditions that the Analyzer panel in Kubernetes Navigator monitors are:

Not Scheduled: This condition indicates that the Pod has not been assigned to a Node yet. This could be due to insufficient resources, node affinity, or other scheduling constraints¹ Unknown: This condition indicates that the Pod status could not be obtained or is not known by the system. This could be due to communication errors, node failures, or other unexpected situations¹

Failed: This condition indicates that the Pod has terminated in a failure state. This could be due to errors in the application code, container configuration, or external factors¹ Pending: This condition indicates that the Pod has been accepted by the system, but one or more of its containers has not been created or started yet. This could be due to image pulling, volume mounting, or network issues¹ Therefore, the correct answer is A, B, C, and D.

To learn more about how to use the Analyzer panel in Kubernetes Navigator, you can refer to this documentation².

1: <https://kubernetes.io/docs/concepts/workloads/pods/pod-lifecycle/#pod-phase> 2:

<https://docs.splunk.com/observability/infrastructure/monitor/k8s-nav.html#Analyzer-panel>

NEW QUESTION # 26

To refine a search for a metric a customer types host: test-*. What does this filter return?

- A. Error

- B. Every metric except those with a dimension of host and a value equal to test.
- C. Only metrics with a value of test- beginning with host.
- **D. Only metrics with a dimension of host and a value beginning with test-.**

Answer: D

Explanation:

The correct answer is A. Only metrics with a dimension of host and a value beginning with test-.

This filter returns the metrics that have a host dimension that matches the pattern test-. For example, test-01, test-abc, test-xyz, etc.

The asterisk (*) is a wildcard character that can match any string of characters¹. To learn more about how to filter metrics in Splunk Observability Cloud, you can refer to this documentation².

1: <https://docs.splunk.com/Observability/gdi/metrics/search.html#Filter-metrics> 2:

<https://docs.splunk.com/Observability/gdi/metrics/search.html>

NEW QUESTION # 27

Which of the following can be configured when subscribing to a built-in detector?

- A. Alerts on a dashboard.
- B. Alerts on team landing page.
- C. Links to a chart.
- **D. Outbound notifications.**

Answer: D

Explanation:

According to the web search results¹, subscribing to a built-in detector is a way to receive alerts and notifications from Splunk Observability Cloud when certain criteria are met. A built-in detector is a detector that is automatically created and configured by Splunk Observability Cloud based on the data from your integrations, such as AWS, Kubernetes, or OpenTelemetry¹. To subscribe to a built-in detector, you need to do the following steps:

Find the built-in detector that you want to subscribe to. You can use the metric finder or the dashboard groups to locate the built-in detectors that are relevant to your data sources¹.

Hover over the built-in detector and click the Subscribe button. This will open a dialog box where you can configure your subscription settings¹.

Choose an outbound notification channel from the drop-down menu. This is where you can specify how you want to receive the alert notifications from the built-in detector. You can choose from various channels, such as email, Slack, PagerDuty, webhook, and so on². You can also create a new notification channel by clicking the + icon².

Enter the notification details for the selected channel. This may include your email address, Slack channel name, PagerDuty service key, webhook URL, and so on². You can also customize the notification message with variables and markdown formatting².

Click Save. This will subscribe you to the built-in detector and send you alert notifications through the chosen channel when the detector triggers or clears an alert.

Therefore, option C is correct.

NEW QUESTION # 28

.....

Are you sometimes nervous about the coming SPLK-4001 exam and worried that you can't get used to the condition? Never worry, we can offer 3 different versions for you to choose: PDF, Soft and APP versions. You can use the Soft version of our SPLK-4001 study materials to stimulate the exam to adjust yourself to the atmosphere of the real exam and adjust your speed to answer the questions. The other 2 versions also boost their own strength and applicable method and you could learn our SPLK-4001 training quiz by choosing the most suitable version to according to your practical situation.
