

# Hot Integration-Architect PDF Guide Free PDF | High-quality New Integration-Architect Test Test: Salesforce Certified Integration Architect

2026 Latest Exams-boost Integration-Architect PDF Dumps and Integration-Architect Exam Engine Free Share:  
<https://drive.google.com/open?id=1AvK6Vvk9ydf4qGIFSRd-HltJe4mOqOkV>

If you still spend a lot of time studying and waiting for Integration-Architect qualification examination, then you need our Integration-Architect test prep, which can help solve all of the above problems. I can guarantee that our study materials will be your best choice. Our Integration-Architect valid practice questions have three different versions, including the PDF version, the software version and the online version, to meet the different needs, our Integration-Architect Study Materials have many advantages, and you can free download the demo of our Integration-Architect exam questions to have a check.

Even in a globalized market, the learning material of similar Integration-Architect doesn't have much of a share, nor does it have a high reputation or popularity. In this dynamic and competitive market, the Integration-Architect learning questions can be said to be leading and have absolute advantages. In order to facilitate the user real-time detection of the learning process, we Integration-Architect Exam Material provided by the questions and answers are all in the past. It is closely associated, as our experts in constantly update products every day to ensure the accuracy of the problem, so all Integration-Architect practice materials are high accuracy.

## Most Trusted Platform to Buy Salesforce Integration-Architect Actual Dumps

As is known to us, the quality is an essential standard for a lot of people consuming movements, and the high quality of the Integration-Architect study materials is always reflected in the efficiency. We are glad to tell you that the Integration-Architect study materials from our company have a high quality and efficiency. If you decide to choose our study materials as your first study tool, it will be very possible for you to pass the Integration-Architect Exam successfully, and then you will get the related certification in a short time.

## Salesforce Certified Integration Architect Sample Questions (Q51-Q56):

### NEW QUESTION # 51

A customer's enterprise architect has identified requirements around caching, queuing, error handling, alerts, retries, event handling, etc. The company has asked the Salesforce integration architect to help fulfill such aspects with their Salesforce program.

Which three recommendations should the Salesforce integration architect make?

Choose 3 answers

- A. Message transformation and protocol translation should be done within Salesforce. Recommend leveraging Salesforce native protocol conversion capabilities as middleware tools are NOT suited for such tasks
- B. Event handling processes such as writing to a log, sending an error or recovery process, or sending an extra message, can

be assumed to be handled by middleware.

- C. Transform a fire-and-forget mechanism to request-reply should be handled by middleware tools (like ETL/ESB) to improve performance.
- D. Provide true message queuing for integration scenarios (including orchestration, process choreography, quality of service, etc.) given that a middleware solution is required.
- E. Event handling in a publish/subscribe scenario, the middleware can be used to route requests or messages to active data-event subscribers from active data-event publishers.

**Answer: B,D,E**

Explanation:

The recommendations that the Salesforce integration architect should make to fulfill the requirements around caching, queuing, error handling, alerts, retries, event handling, etc. are based on the best practices and capabilities of the middleware tools. The recommendation B is valid because middleware tools can provide true message queuing for integration scenarios that require asynchronous processing, guaranteed delivery, load balancing, etc. The recommendation D is valid because middleware tools can handle various events that may occur during the integration process, such as logging errors, sending notifications, triggering recovery actions, etc. The recommendation E is valid because middleware tools can support the publish/subscribe pattern for event-driven integration, where the middleware can route messages from publishers to subscribers based on topics or filters. The recommendation A is not valid because transforming a fire-and-forget mechanism to request-reply does not improve performance, but rather increases the latency and complexity of the integration. The recommendation C is not valid because message transformation and protocol translation are tasks that are better suited for middleware tools than Salesforce, as they can handle different formats and protocols more efficiently and flexibly<sup>23</sup>

#### NEW QUESTION # 52

Northern Trail Outfitters requires an integration to be set up between one of its Salesforce orgs and an External Data Source using Salesforce Connect. The External Data Source supports Open Data Protocol.

Which configuration should an integration architect recommend be implemented in order to secure requests coming from Salesforce?

- A. Configure Special Compatibility for OData connection.
- B. Configure CSRF Protection for OData connection.
- C. Configure Identity Type for OData connection.

**Answer: C**

Explanation:

In the context of Salesforce Connect, securing the integration depends heavily on how the platform authenticates with the external system. The Identity Type configuration is the fundamental security setting for an External Data Source.

The architect must choose between two Identity Types:

\* Named Principal: Salesforce uses the same set of credentials for all users to access the external system. This is simple to manage but does not allow the external system to distinguish between individual Salesforce users for auditing or permission purposes.

\* Per User: Each Salesforce user must have their own credentials for the external system. This is the most secure option as it ensures that the data visible in Salesforce respects the specific permissions the user has in the source system.

By correctly configuring the Identity Type, the architect ensures that the requests coming from Salesforce are properly authorized at the target system. Option B (CSRF Protection) is a security measure to prevent cross-site request forgery but is not the primary mechanism for authenticating the Salesforce service itself. Option A is a technical compatibility setting for non-standard OData implementations and does not directly relate to security. Therefore, recommending the appropriate Identity Type-typically "Per User" for sensitive data-is the key step in securing the OData connection.

#### NEW QUESTION # 53

An Integration Architect has built a solution using REST API, updating Account, Contact, and other related information. The data volumes have increased, resulting in higher API calls consumed, and some days the limits are exceeded. A decision was made to decrease the number of API calls using bulk updates. The customer prefers to continue using REST API to avoid architecture changes.

Which REST API composite resources should the Integration Architect use to allow up to 200 records in one API call?

- A. Batch
- B. SObject Tree

- C. Object Collections
- D. Composite

**Answer: C**

Explanation:

Explanation

SOBJECT Collections is a REST API composite resource that allows you to create, update, or delete up to 200 records in one API call. You can specify the type of operation (create, update, or delete) for each record in the request body, and the response body will contain the status and IDs of each record. SOBJECT Collections is suitable for bulk operations on records that are not related to each other<sup>1</sup>.

SOBJECT Tree is another REST API composite resource that allows you to create up to 200 records in one API call. However, unlike SOBJECT Collections, SOBJECT Tree requires the records to be related to each other in a hierarchy. You can specify the parent and child records in a JSON tree structure, and the response body will contain the reference IDs and URLs of each record.

SOBJECT Tree is suitable for creating nested data in one request<sup>2</sup>.

Batch is a REST API composite resource that allows you to combine up to 25 requests in one API call. Each request can be a different type of operation (query, create, update, delete, etc.) on different objects. The response body will contain the status and results of each request. Batch is suitable for grouping multiple requests into one transaction<sup>3</sup>.

Composite is a REST API composite resource that allows you to execute a series of REST API requests in one API call. You can use the output of one request as the input of another request using a reference ID. The response body will contain the status and results of each request. Composite is suitable for chaining requests that depend on each other.

Therefore, the correct answer is A, because SOBJECT Collections is the only REST API composite resource that allows bulk updates on records that are not related to each other.

#### NEW QUESTION # 54

Northern Trail Outfitters wants to improve the quality of call-outs from Salesforce to their REST APIs. For this purpose, they will require all API clients/consumers to adhere to REST API Markup Language (RAML) specifications that include field-level definition of every API request and response payload. RAML specs serve as interface contracts that Apex REST API Clients can rely on. Which two design specifications should the Integration Architect include in the integration architecture to ensure that Apex REST API Clients unit tests confirm adherence to the RAML specs?

Choose 2 answers

- A. Implement HttpCalloutMock to return responses per RAML specification.
- B. Require the Apex REST API Clients to implement the HttpCalloutMock.
- C. Call the HttpCalloutMock implementation from the Apex REST API Clients.
- D. Call the Apex REST API Clients in a test context to get the mock response.

**Answer: A,D**

Explanation:

Explanation

The HttpCalloutMock interface allows testing HTTP callouts by returning a predefined response in a test context. By implementing HttpCalloutMock to return responses per RAML specification, the Apex REST API Clients unit tests can confirm that the API requests and responses match the expected format and values.

Calling the Apex REST API Clients in a test context to get the mock response is also necessary to verify the adherence to the RAML specs. Calling the HttpCalloutMock implementation from the Apex REST API Clients or requiring the Apex REST API Clients to implement the HttpCalloutMock are not valid options because the HttpCalloutMock interface is implemented by a separate class that is passed as a parameter to the Test.setMock method<sup>2</sup> References: 1: Idempotent REST APIs 2: Testing HTTP Callouts by Implementing the HttpCalloutMock Interface

#### NEW QUESTION # 55

Northern Trail Outfitters submits orders to the manufacturing system web-service. Recently, the system has experienced outages that keeping service unavailable for several days.

What solution should an architect recommend to handle errors during these types of service outages?

- A. A Use Platform Event replay and custom scheduled Apex process to retrieve missed events.

- B. Use middleware queuing and buffering to insulate Salesforce from system outages.
- C. Use Outbound Messaging to automatically retry failed service calls.
- D. Use @future job and custom scheduled apex process to retry failed service calls.

**Answer: B**

Explanation:

Using middleware queuing and buffering is a solution that can handle errors during service outages by storing the messages in a queue until the service is available again. This way, Salesforce does not lose any data or encounter any failures when the service is down. Using @future job and custom scheduled apex process to retry failed service calls is not a good solution because it can consume a lot of governor limits and create a lot of duplicate records. Using Outbound Messaging to automatically retry failed service calls is also not a good solution because it has a limited number of retries and a fixed retry interval, which may not be sufficient for long service outages. Using Platform Event replay and custom scheduled Apex process to retrieve missed events is not applicable for this scenario because Platform Events are used for event-driven integration, not for web-service integration.

## NEW QUESTION # 56

.....

By unremitting effort and studious research of the Integration-Architect actual exam, our professionals devised our high quality and high Integration-Architect effective practice materials which win consensus acceptance around the world. They are meritorious experts with a professional background in this line and remain unpretentious attitude towards our Integration-Architect Preparation materials all the time. They are unsuspecting experts who you can count on.

**New Integration-Architect Test Test:** <https://www.exams-boost.com/Integration-Architect-valid-materials.html>

If you prepare for Salesforce Integration-Architect exams just in time, we will be your best choice, Exams-boost.com Practice Tests for Integration-Architect Exam provide you with multiple advantages: You learn the real exam scenario through these innovatively prepared tests, There is no doubt that PDF of Integration-Architect exam torrent is the most prevalent version among youngsters, mainly due to its convenience for a demo, through which you can have a general understanding and simulation about our Integration-Architect test braindumps to decide whether you are willing to purchase or not, and also convenience for paper printing for you to do some note-taking, Salesforce Integration-Architect PDF Guide If clients are old client, they can enjoy some certain discount.

Our website guarantees you high pass rate, For example, users are authenticated when they provide both their username and correct password, If you prepare for Salesforce Integration-Architect Exams just in time, we will be your best choice.

## Quiz Salesforce - High Pass-Rate Integration-Architect PDF Guide

Exams-boost.com Practice Tests for Integration-Architect Exam provide you with multiple advantages: You learn the real exam scenario through these innovatively prepared tests.

There is no doubt that PDF of Integration-Architect exam torrent is the most prevalent version among youngsters, mainly due to its convenience for a demo, through which you can have a general understanding and simulation about our Integration-Architect test braindumps to decide whether you are willing to purchase or not, and also convenience for paper printing for you to do some note-taking.

If clients are old client, they can enjoy some certain Integration-Architect discount, We hereby guarantee if you fail exam we will refund the test dumps cost to you soon.
