CLT學習資料 & 最新CLT題庫

通過擁有技術含量的MSSC CLT認證資格，您可以使自己在一家新公司獲得不錯的工作機會，來提升你的IT技能，有一個更好的職業發展道路。我們的CLT考古題是可靠，經濟實惠，品質最高的題庫資料，以幫助考生解決如何通過MSSC CLT考試的問題。我們還會不定期的更新所有考試的考古題，想獲得最新的CLT考古題就在我們的網站，確保你成功通過CLT考試，實現夢想！

最新的 Certified Logistics Technician CLT 免費考試真題 (Q67-Q72):

問題 #67

A list of items in a vehicle's cargo is

- A. Dock Receipt
- **B. Manifest**
- C. Delivery Receipt
- D. Picking List

答案： B

解題說明：

In logistics operations, a manifest serves as the master list of all cargo items loaded onto a vehicle, container, aircraft, or vessel. According to CLT 4.0, it details shipment identifiers, consignee addresses, weights, cube measurements, and associated documentation like bills of lading or invoices. The manifest ensures accountability and traceability from origin to destination by allowing carriers and receivers to cross-check cargo content against documentation. It is used in dispatch and tracking to confirm that the correct freight has been loaded and helps prevent mis-shipments or loss. Unlike a picking list, which is used in order fulfillment within the warehouse, the manifest is used for transportation verification. The manifest also plays a regulatory role, especially for hazardous materials or international cargo, where customs and compliance verification depend on its accuracy.

問題 #68

Which of the following is a method used by logistics companies to reduce mistakes in logistics records caused by human entry error?

- A. hiring quality control personnel to inspect every order prior to shipping
- B. following up with customer on their satisfaction levels
- **C. automating the data entry and retrieval process**
- D. eliminating automated retrieval process and replacing with human retrieval options

答案： C

解題說明：

The CLT "Inventory Control and Data Accuracy" standards emphasize automation of data entry and retrieval processes as the most effective method to reduce human error in logistics records. Automation integrates barcode scanning, RFID, and WMS systems to capture real-time data directly from material handling activities. This minimizes manual input errors such as miscounts or transposed digits. Automated data collection improves traceability, accelerates information flow, and supports immediate decision-making across the supply chain. While quality inspections remain necessary, relying solely on human verification is inefficient. CLT stresses that technology-driven accuracy enhances performance, lowers rework costs, and ensures that records reflect true inventory positions, enabling precise forecasting and order fulfillment.

問題 #69

Which transportation mode is typically used for low-weight, high-value products such as electronics and jewelry?

- A. Rail
- B. Water
- C. Truck
- **D. Air**

答案： D

解題說明：

Air transportation provides the fastest transit times and highest security, making it the preferred mode for low-weight, high-value, and time-sensitive products like electronics, pharmaceuticals, or jewelry. According to CLT 4.0, air freight is ideal when delivery speed outweighs cost concerns, as it minimizes exposure to loss or damage through reduced handling and transit duration. However, air is also the most expensive per-unit cost mode, limited by size and weight constraints. Air shipments typically integrate with just-in-time (JIT) and lean supply chains where quick replenishment is vital. Trucking often handles short-haul distribution; water offers low cost but slow speed; and rail suits heavy, bulk freight. Hence, CLT stresses selecting modes based on balancing cost, time, value density, and customer service needs.

問題 #70

What is used for automatic item identification?

- A. conveyor

- B. shape recognition
- C. label guns
- **D. RFID**

答案： D

解題說明：

Radio Frequency Identification (RFID) is the technology used for automatic item identification. The CLT "Inventory Control and Tracking Systems" module defines RFID as an advanced data capture method using radio signals to read embedded microchips (tags) without direct line-of-sight. RFID enables real-time tracking of inventory movement through gates, conveyors, or storage zones. Compared to barcodes, RFID can scan multiple items simultaneously and store more data per tag. This improves accuracy, reduces manual scanning, and supports automation within Warehouse Management Systems (WMS). CLT emphasizes that RFID enhances visibility, reduces shrinkage, and speeds up cycle counts. Proper use requires integration with database systems and adherence to data security protocols.

問題 #71

The contract stating that a carrier has received certain freight and is responsible for its delivery is known as a

- **A. Bill of Lading**
- B. Receiving Report
- C. Stock Requisition
- D. Packing List

答案： A

解題說明：

According to the CLT "Dispatch and Tracking" competency, the Bill of Lading (BOL) is the formal, legal document that establishes a contract of carriage between the shipper and the carrier. It serves three main functions: it is a receipt acknowledging that the carrier has received the described goods, a contract specifying terms of transport, and in some cases, a document of title defining ownership. The BOL details the shipper and consignee, carrier information, number of packages, weight, commodity description, and any handling instructions. When the consignee signs upon receipt, it confirms delivery completion. This document holds legal authority for claims and freight accountability. In contrast, a Packing List is an internal record of contents, and a Receiving Report documents internal receipt activities. The BOL remains the backbone of transportation documentation and proof of carrier responsibility under MSSC's dispatch and tracking procedures.

問題 #72
