## Latest Microsoft AZ-104 Guide Files - Exam AZ-104 Introduction

Knowledge of the AZ-104 real study dumps contains are very comprehensive, not only have the function of online learning, also can help the user to leak fill a vacancy, let those who deal with qualification exam users can easily and efficient use of the AZ-104 question guide. By visit our website, the user can obtain an experimental demonstration, free after the user experience can choose the most appropriate and most favorite AZ-104 Exam Questions download. Users can not only learn new knowledge, can also apply theory into the actual problem, but also can leak fill a vacancy, can say such case selection is to meet, so to grasp the opportunity!

## Microsoft Azure Administrator Sample Questions (Q391-Q396):

### NEW QUESTION # 391

Hotspot Question

You plan to create an Azure Storage account in the Azure region of East US 2.

You need to create a storage account that meets the following requirements:

- Replicates synchronously
- Remains available if a single data center in the region fails

How should you configure the storage account? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Zone-redundant storage (ZRS)

Zone-redundant storage (ZRS) replicates your data synchronously across three storage clusters in a single region. LRS would not remain available if a data center in the region fails. GRS and RA GRS use asynchronous replication.

Box 2: StorageV2 (general purpose V2)

ZRS only support GPv2.

### NEW QUESTION # 392

You have an Azure subscription named Subscription1.

You plan to deploy an Ubuntu Server virtual machine named VM1 to Subscription1.

You need to perform a custom deployment of the virtual machine. A specific trusted root certification authority (CA) must be added during the deployment.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

Explanation

Box 1: Cloud-init.txt

Cloud-init.txt is used to customize a Linux VM on first boot up. It can be used to install packages and write files, or to configure users and security. No additional steps or agents are required to apply your configuration.

Box 2: The az vm create command

Once Cloud-init.txt has been created, you can deploy the VM with az vm create cmdlet, using the --customdata parameter to provide the full path to the cloud-init.txt file.

Topic 1, Litware, inc.

Overview

Litware, Ltd. is a consulting company that has a main office in Montreal and two branch offices in Seattle and New York.

The Montreal office has 2,000 employees. The Seattle office has 1,000 employees. The New York office has 200 employees.

All the resources used by Litware are hosted on-premises.

Litware creates a new Azure subscription. The Azure Active Directory (Azure AD) tenant uses a domain named

Litware.onmicrosoft.com. The tenant uses the P1 pricing tier.

Existing Environment

The network contains an Active Directory forest named Litware.com. All domain controllers are configured as DNS servers and host the Litware.com DNS zone.

Litware has finance, human resources, sales, research, and information technology departments. Each department has an

organizational unit (OU) that contains all the accounts of that respective department. All the user accounts have the department attribute set to their respective department. New users are added frequently.

Litware.com contains a user named User1.

All the offices connect by using private links.

Litware has data centers in the Montreal and Seattle offices. Each data center has a firewall that can be configured as a VPN device.

All infrastructure servers are virtualized. The virtualization environment contains the servers in the following table.

Litware uses two web applications named App1 and App2. Each instance on each web application requires 1GB of memory.

The Azure subscription contains the resources in the following table.

The network security team implements several network security groups (NSGs).

Planned Changes

Litware plans to implement the following changes:

- \* Deploy Azure ExpressRoute to the Montreal office.
- \* Migrate the virtual machines hosted on Server1 and Server2 to Azure.
- \* Synchronize on-premises Active Directory to Azure Active Directory (Azure AD).
- \* Migrate App1 and App2 to two Azure web apps named webApp1 and WebApp2.

Technical Requirements

Litware must meet the following technical requirements:

- \* Ensure that WebApp1 can adjust the number of instances automatically based on the load and can scale up to five instance\*.
- \* Ensure that VM3 can establish outbound connections over TCP port 8080 to the applications servers in the Montreal office.
- \* Ensure that routing information is exchanged automatically between Azure and the routers in the Montreal office.
- \* Enable Azure Multi-Factor Authentication (MFA) for the users in the finance department only.
- \* Ensure that webapp2.azurewebsites.net can be accessed by using the name app2.Litware.com
- \* Connect the New York office to VNet1 over the Internet by using an encrypted connection.
- \* Create a workflow to send an email message when the settings of VM4 are modified.
- \* Create a custom Azure role named Role1 that is based on the Reader role.
- \* Minimize costs whenever possible.

### NEW QUESTION # 394

You have an Azure Linux virtual machine that is protected by Azure Backup.

One week ago, two files were deleted from the virtual machine.

You need to reses clients connect n on-premises computer as quickly as possible.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

- 1 - From the Azure portal, click File Recovery from the vault.
- 2 - Select a restore poing.
- 3 - Download and run a script.
- 4 - Copy the files by using AZCopy.
