# 100% Pass Microsoft - AZ-800 - Administering Windows Server Hybrid Core Infrastructure–Trustable Latest Examprep

BONUS!!! Download part of DumpsTorrent AZ-800 dumps for free: https://drive.google.com/open?id=1p6rBiYxM0ZQf6Fiu7Ohz8J9xlQgnUtJ7

By these three versions of AZ-800 practice materials we have many repeat orders in a long run. The PDF version helps you read content easier at your process of studying with clear arrangement, and the PC Test Engine version of AZ-800 practice materials allows you to take stimulation exam to check your process of exam preparing, which support windows system only. Moreover, there is the APP version of AZ-800 practice materials, you can learn anywhere at any time with it at your cellphones without the limits of installation.

When you are eager to pass the AZ-800 real exam and need the most professional and high quality practice material, we are willing to offer help. Our AZ-800 training prep has been on the top of the industry over 10 years with passing rate up to 98 to 100 percent. By practicing our AZ-800 Learning Materials, you will get the most coveted certificate smoothly. Our AZ-800 study quiz will guide you throughout the competition with the most efficient content compiled by experts.

Valid Braindumps AZ-800 Questions, AZ-800 Certification Practice

In today's competitive industry, only the brightest and most qualified candidates are hired for high-paying positions. Obtaining Microsoft Administering Windows Server Hybrid Core Infrastructure is a wonderful approach to be successful because it can draw in prospects and convince companies that you are the finest in your field. Pass the Administering Windows Server Hybrid Core Infrastructure exam to establish your expertise in your field and receive certification. However, passing the Administering Windows Server Hybrid Core Infrastructure AZ-800 Exam is challenging.

Microsoft AZ-800 Exam is designed for IT professionals who want to validate their skills in administering Windows Server hybrid core infrastructure. AZ-800 exam is part of the Microsoft Certified: Azure Stack HCI Administrator Associate certification, which is designed for individuals who work with Windows Server and Microsoft Azure Stack HCI solutions.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q33-Q38):

NEW QUESTION # 33
Hotspot Question
Your network contains the segments shown in the following table.

You have servers that run Windows Server and are configured as shown in the following table.

You deploy a server named Server4 that runs Windows Server and has a static IP address of 172.16.1.1. You connect Server4 to Segment1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 34
You have servers that run Windows Server 2022 as shown in the following table.

Server2 contains a .NET app named App1.
You need to establish a WebSocket connection from App1 to the SQL Server instance on Server!. The solution must meet the following requirements:
* Minimize the number of network ports that must be open on the on-premises network firewall.
* Minimize administrative effort.
What should you create first?

- A. a WFC relay connection
- B. an Azure VPN gateway
- C. a hybrid connection
- D. an Azure Relay namespace

Answer: C

NEW QUESTION # 35
Your on-premises network contains a server named Server1 and uses an IP address space of 192.168.10.0/24.
You have an Azure virtual network that contains a subnet named Subnet1. Subnet1 uses an IP address space of 192.168.10.0/24.
You need to migrate Server1 to Subnet1. You must use Azure Extended Network to maintain the existing IP address of Server1.
What is the minimum number of virtual machines that you should deploy? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point

Answer:

Explanation:

Explanation:

NEW QUESTION # 36

Your network contains an Active Directory domain named contoso.com. The domain contains group managed service accounts (gMSAs). You have a server named Server1 that runs Windows Server and is in a workgroup. Server! hosts Windows containers. You need to ensure that the Windows containers can authenticate to contoso.com.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

In Windows Server container scenarios, a containerized workload authenticates to Active Directory by using a group Managed Service Account (gMSA) referenced by a credential spec (CredSpec) JSON. The AZ-800 materials explain that gMSAs require the Key Distribution Service (KDS) root key once per forest before any gMSA passwords can be generated and rotated. Therefore, the first step is to create the KDS root key. Next, you create the gMSA and define who is allowed to retrieve its managed password. For workgroup (non- domain-joined) container hosts, you cannot authorize the host's computer account (because none exists), so you typically create a standard domain user (or group) and assign it in PrincipalsAllowedToRetrieveManagedPassword when creating the gMSA-this is called out in the hybrid core infrastructure guidance for container hosts. Finally, because Server1 is in a workgroup, you cannot run New-CredentialSpec on that host. The guidance states that the CredSpec file must be created on a domain- joined management machine (with AD tools), then copied to the workgroup host where containers are launched with --security-opt "credentialspec=...". Steps such as running New-CredentialSpec or other tooling directly on Server1-or granting broader rights than necessary-violate least-privilege and do not work in a workgroup configuration.

NEW QUESTION # 37

Your network contains an Active Directory domain, a web app named App1, and a perimeter network. The perimeter network contains a server named Server1 that runs Windows Server.
You plan to provide external access to App1.
You need to implement the Web Application Proxy role service on Server1.
Which role should you add to Server1, and which role should you add to the network? To answer, drag the appropriate roles to the correct targets. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:
