As is known to us, there are best sale and after-sale service of the CTFL-AT study materials all over the world in our company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable CTFL-AT study materials for all customers. More importantly, it is evident to all that the CTFL-AT study materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market. If you want to pass the CTFL-AT Exam and get the related certification in the shortest time, choosing the CTFL-AT study materials from our company will be in the best interests of all people. We can make sure that it will be very easy for you to pass your exam and get the related certification in the shortest time that beyond your imagination.

The CTFL-AT exam is a multiple-choice exam that consists of 40 questions. CTFL-AT exam is conducted online and is proctored. Candidates have 90 minutes to complete the exam. To pass the exam, candidates must score at least 65%. ISTQB Certified Tester - Foundation Level Extension - Agile Tester certification is valid for five years, after which candidates must renew their certification. Overall, the CTFL-AT Certification is a valuable credential for software testers who want to enhance their skills and knowledge in agile testing.

First-hand Reliable CTFL-AT Exam Bootcamp - ISQI Valid Braindumps CTFL-AT Ppt: ISTQB Certified Tester - Foundation Level Extension - Agile Tester

If you still desperately cram knowledge and spend a lot of precious time and energy to prepare for passing ISQI certification CTFL-AT exam, and at the same time do not know how to choose a more effective shortcut to pass ISQI Certification CTFL-AT Exam. Now PracticeMaterial provide you a effective method to pass ISQI certification CTFL-AT exam. It will play a multiplier effect to help you pass the exam

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q75-Q80):

NEW QUESTION # 75

Which of the following is a risk that continuous integration introduces?

- A. Testers sometimes have too many builds to test, which reduces the quality of testing.
- B. Teams sometimes over-rely on unit tests and exclude some important system and acceptance tests.
- C. Developer's workload is increased, which can result in a reduction of output.
- D. Teams no longer have the ability to run manual tests, as all tests must be automated.

Answer: A

Explanation:

Continuous integration is a practice of integrating code changes frequently and automatically into a shared repository, and running automated tests to verify the integration. Continuous integration can introduce some risks to the testing process, such as:

* Testers sometimes have too many builds to test, which reduces the quality of testing. This can happen when the code changes are too frequent or too large, and the testers do not have enough time or resources to test each build thoroughly. This can lead to missed defects, incomplete test coverage, and reduced confidence in the product quality.

* Testers sometimes have to deal with unstable or broken builds, which affects the testability of the product. This can happen when the code changes introduce errors or conflicts that cause the build to fail or malfunction. This can waste the testers' time and effort, and delay the feedback cycle.

* Testers sometimes have to cope with changing requirements and priorities, which affects the test planning and execution. This can happen when the stakeholders or customers provide new or modified requirements or feedback during the development cycle. This can require the testers to adapt their test strategy, test cases, and test data accordingly, and to balance the testing of new features and regression testing of existing features. References: ISTQB Foundation Level Agile Tester Syllabus1, Section 2.2.3, page 14; ISTQB Glossary of Testing Terms2, version 4.0, page 15.

NEW QUESTION # 76

In Agile projects, which of the following approaches would result in the best compromise for preserving independence of testers and for allowing testers to have a good understanding of the product as well as good relationships with other team members?

- A. Having independent separate test teams where testers are assigned to Agile teams on a long-term basis, at the beginning of an Agile project
- B. Having only Agile teams where testers are integral parts and where they perform many of the testing tasks, without having an independent test team
- C. Having independent separate test teams where all of the testers work separately from developers without being assigned to Agile teams
- D. Having independent separate test teams where testers are assigned to Agile teams on-demand during the final days of each iteration

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 2.5 Testers and Independence, it states:

"Testers may be assigned to Agile teams on a permanent or rotating basis. While full independence is compromised, this setup allows

for better collaboration and understanding of the product, while still maintaining some degree of independence." Thus, Option B is the most accurate - long-term embedded testers support Agile collaboration while preserving partial independence.

* Option A leads to late involvement, which contradicts Agile principles.

* Option C sacrifices independence entirely.

* Option D is traditional and contrary to Agile values of collaboration.

Learning Objective (K2) - Understand approaches to preserving test independence in Agile

NEW QUESTION # 77

You have been asked to execute an exploratory testing session on Park & Ride system. The test charter has been titled as "Buy a bus ticket". As a result, a number of defects were reported, the titles of which are listed below.

Which defect is out of scope for the given test charter?

- A. Price for a bus ticket was calculated incorrectly.
- B. Failed to buy a bus ticket when the network connection to the Central System is down.
- C. Failed to buy a bus ticket after 18:00.
- **D. Payment for parking ticket is restricted to cash only (no credit card supported).**

Answer: D

Explanation:

Explanation

The test charter for the exploratory testing session is focused on buying a bus ticket, not a parking ticket.

Therefore, any defect related to the payment for parking ticket is out of scope for the given test charter. The other defects are related to the functionality, usability, or reliability of buying a bus ticket, which are in scope for the test charter. References: ISTQB Certified Tester Foundation Level Agile Tester Extension Syllabus, Version 2014, Section 2.3.2 Exploratory Testing 1, Section 2.3.2.1 Test Charter 2; ISTQB Glossary of Testing Terms, Version 3.2, 2017, Definition of Test Charter 3

2014, Section 2.3.2.1 Test Charter 3: [ISTQB Glossary of Testing Terms, Version 3.2, 2017, Definition of Test Charter]

NEW QUESTION # 78

Which of the following is NOT a statement of value from the Agile Manifesto?

- A. Working software over comprehensive documentation
- **B. Processes and tools over individuals and interactions.**
- C. Customer collaboration over contract negotiation.
- D. Responding to change over following a plan.

Answer: B

Explanation:

The Agile Manifesto is a declaration of four values and twelve principles that guide the Agile software development approach^{1,2}. The four values of the Agile Manifesto are^{1,2}:

* Individuals and interactions over processes and tools

* Working software over comprehensive documentation

* Customer collaboration over contract negotiation

* Responding to change over following a plan

These values emphasize the importance of human collaboration, working product, customer feedback, and adaptability over rigid processes, extensive documentation, fixed contracts, and predefined plans. The values do not imply that the items on the right are not important, but rather that the items on the left are more important and should be prioritized.

Therefore, the statement that is NOT a value from the Agile Manifesto is B, as it contradicts the first value of the Agile Manifesto.

The correct statement should be "Individuals and interactions over processes and tools". References: ISTQB Foundation Level Agile Tester Extension Syllabus¹, page 10; ISTQB Agile Tester Sample Exam², question 1.

NEW QUESTION # 79

Which of the following describes the frequency with which usually all changes made to the software are merged and all changed components are integrated regularly in a continuous integration process?

- A. At least once per iteration
- B. At least once a week
- C. At least once a month
- **D. At least once a day**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From the CTFL-AT Syllabus v4.0, Section 4.2 Continuous Integration, it states:

"Continuous integration involves integrating code into a shared repository several times a day. Each integration is verified by an automated build and automated tests." Hence, Option D - at least once a day - correctly reflects best practice in continuous integration.

* Option A (once per iteration) and B, C are far too infrequent to meet the goals of CI.

* The objective is to detect integration issues early and often, which is only achievable through daily (or more frequent) integrations.
