

# 100% Pass Quiz 2026 312-50v13: Certified Ethical Hacker Exam (CEHv13)–Valid Latest Exam Simulator

BTW, DOWNLOAD part of ITExamDownload 312-50v13 dumps from Cloud Storage: [https://drive.google.com/open?id=170iVhmLJnO-CJ6N0j\\_Jf9jBa3mxrmqWV](https://drive.google.com/open?id=170iVhmLJnO-CJ6N0j_Jf9jBa3mxrmqWV)

The ECCouncil 312-50v13 certification provides is beneficial to accelerate your career in the tech sector. Today, the ECCouncil certification is a fantastic choice to get high-paying jobs and promotions, and to achieve it, you must crack the challenging 312-50v13 Exam. It is critical to prepare with actual Certified Ethical Hacker Exam (CEHv13) (312-50v13) exam questions if you have less time and want to clear the test in a short time.

Our 312-50v13 Practice Materials are compiled by first-rank experts and 312-50v13 Study Guide offer whole package of considerate services and accessible content. Furthermore, 312-50v13 Actual Test improves our efficiency in different aspects. Having a good command of professional knowledge will do a great help to your life. With the advent of knowledge times, we all need some professional certificates such as 312-50v13 to prove ourselves in different working or learning condition.

## 312-50v13 Latest Exam Simulator Excellent Questions Pool Only at ITExamDownload

Just like the saying goes, it is good to learn at another man's cost. In the process of learning, it is more important for all people to have a good command of the method from other people. The Certified Ethical Hacker Exam (CEHv13) exam questions from our company will help you find the good study method from other people. Using the 312-50v13 Test Guide from our company, you can not only pass your exam, but also you will have the chance to learn about the different and suitable study skills. We believe these skills will be very useful for you near life.

## ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q536-Q541):

### NEW QUESTION # 536

What is the following command used for?

```
sqlmap.py-u
```

```
„http://10.10.1.20/?p=1
```

```
&forumaction=search"-dbs
```

- A. Creating backdoors using SQL injection
- B. A Enumerating the databases in the DBMS for the URL
- C. Searching database statements at the IP address given

- D. Retrieving SQL statements being executed on the database

**Answer: B**

#### NEW QUESTION # 537

What is the BEST alternative if you discover that a rootkit has been installed on one of your computers?

- A. Perform a trap and trace
- **B. Reload from known good media**
- C. Delete the files and try to determine the source
- D. Reload from a previous backup
- E. Copy the system files from a known good system

**Answer: B**

#### NEW QUESTION # 538

A cybersecurity analyst in an organization is using the Common Vulnerability Scoring System to assess and prioritize identified vulnerabilities in their IT infrastructure. They encountered a vulnerability with a base metric score of 7, a temporal metric score of 8, and an environmental metric score of 5. Which statement best describes this scenario?

- A. The vulnerability has an overall high severity with a diminishing likelihood of exploitability over time, but it is less impactful in their specific environment
- B. The vulnerability has a medium severity with a diminishing likelihood of exploitability over time, but a significant impact in their specific environment
- **C. The vulnerability has an overall high severity, the likelihood of exploitability is increasing over time, and it has a medium impact in their specific environment**
- D. The vulnerability has a medium severity with a high likelihood of exploitability over time and a considerable impact in their specific environment

**Answer: C**

Explanation:

The Common Vulnerability Scoring System (CVSS) is a method used to supply a qualitative measure of severity for a vulnerability. CVSS consists of three metric groups: Base, Temporal, and Environmental. The Base metrics produce a score ranging from 0 to 10, which can then be modified by scoring the Temporal and Environmental metrics. A vector string represents the values of all the metrics as a block of text. The Base metrics measure the intrinsic characteristics of a vulnerability, such as the attack vector, the attack complexity, the required privileges, the user interaction, the scope, and the impact on confidentiality, integrity, and availability. The Base score reflects the severity of a vulnerability assuming that there is no temporal information or context available. The Temporal metrics measure the characteristics of a vulnerability that change over time, such as the exploit code maturity, the remediation level, and the report confidence. The Temporal score reflects the current state of a vulnerability and its likelihood of being exploited. The Environmental metrics measure the characteristics of a vulnerability that depend on a specific implementation or environment, such as the security requirements, the modified base metrics, and the collateral damage potential. The Environmental score reflects the impact of a vulnerability on a particular organization or system. In this scenario, the vulnerability has a Base score of 7, a Temporal score of 8, and an Environmental score of 5. This means that:

- \* The vulnerability has a high severity based on its intrinsic characteristics, such as the attack vector, the attack complexity, the required privileges, the user interaction, the scope, and the impact on confidentiality, integrity, and availability. A Base score of 7 corresponds to a high severity rating according to the CVSS v3.0 specification.
- \* The vulnerability has an increasing likelihood of exploitability over time based on its current state, such as the exploit code maturity, the remediation level, and the report confidence. A Temporal score of 8 is higher than the Base score of 7, which indicates that the vulnerability is more likely to be exploited as time passes.
- \* The vulnerability has a medium impact on the specific environment or implementation based on the security requirements, the modified base metrics, and the collateral damage potential. An Environmental score of 5 is lower than the Base score of 7, which indicates that the vulnerability is less impactful in the particular context of the organization or system. Therefore, the statement that best describes this scenario is: The vulnerability has an overall high severity, the likelihood of exploitability is increasing over time, and it has a medium impact in their specific environment.

### NEW QUESTION # 539

A Security Engineer at a medium-sized accounting firm has been tasked with discovering how much information can be obtained from the firm's public-facing web servers. The engineer decides to start by using netcat to port 80.

The engineer receives this output:

HTTP/1.1 200 OK

Server: Microsoft-IIS/6

...

Which of the following is an example of what the engineer performed?

- A. SQL injection
- B. Whois database query
- C. Banner grabbing
- D. Cross-site scripting

**Answer: C**

Explanation:

In CEH v13 Module 03: Scanning Networks, banner grabbing is defined as a technique used during reconnaissance to capture service banners that provide information about:

Web server version

Operating system

Service details

In This Case:

The engineer used Netcat to connect to port 80 (HTTP).

The response reveals the web server software (Microsoft-IIS/6), which is typical of a banner returned in the server's HTTP response headers.

This technique helps identify vulnerable versions of services.

Other Options:

B). SQL injection: Involves sending SQL payloads - unrelated here.

C). Whois query: Provides domain registration info - unrelated.

D). Cross-site scripting: Requires injecting scripts into a web app - not relevant here.

Reference:

Module 03 - Banner Grabbing and Service Identification Techniques

CEH Labs: Using Netcat and Telnet for Manual Banner Grabbing

### NEW QUESTION # 540

As an IT technician in a small software development company, you are responsible for protecting the network against various cyber threats. You learn that attackers often try to bypass firewalls. Which of the following is a common technique used by attackers to evade firewall detection?

- A. Using encrypted communication channels to evade network monitoring tools
- B. Implementing an open-source operating system to bypass proprietary software restrictions
- C. Changing the source IP address of packets to make traffic appear to originate from a trusted source
- D. Using social engineering techniques to trick employees into revealing sensitive information

**Answer: A**

Explanation:

According to the CEH Network and Perimeter Security module, one of the most effective and widely used firewall evasion techniques is the use of encrypted communication channels. When traffic is encrypted using protocols such as HTTPS, TLS, or VPN tunnels, traditional firewalls and packet-inspection tools may be unable to inspect payload contents unless SSL/TLS inspection is explicitly enabled.

CEH documentation explains that attackers commonly encrypt command-and-control (C2) traffic to:

\* Blend in with legitimate encrypted traffic

\* Bypass content-based inspection

\* Evade signature-based detection

Option B is therefore correct.

Option A (IP spoofing) is less effective against stateful firewalls.

Option C is a human-focused attack, not firewall evasion.

Option D has no relevance to firewall bypass techniques.  
CEH highlights encryption misuse as a major blind spot in perimeter defenses.

## NEW QUESTION # 541

.....

The web-based ECCouncil 312-50v13 practice test software can be used through browsers like Firefox, Safari, and Google Chrome. The customers don't need to download or install any excessive plugins or software in order to use the web-based ECCouncil 312-50v13 Practice Exam format. The web-based 312-50v13 practice test software format is supported by different operating systems like Mac, iOS, Linux, Windows, and Android.
