

# Real Nutanix NCP-EUC Testing Environment - NCP-EUC Valid Study Materials

P.S. Free & New NCP-EUC dumps are available on Google Drive shared by ITEXAMSIMULATOR: <https://drive.google.com/open?id=1TFZTsQKE2hDuHMPug03ydhEb16B6qzy9>

We always learned then forget, how to solve this problem, the answer is to have a good memory method, our NCP-EUC exam question will do well on this point. Our NCP-EUC real exam materials have their own unique learning method, abandon the traditional rote learning, adopt diversified memory patterns, such as the combination of text and graphics memory method, to distinguish between the memory of knowledge. Our NCP-EUC learning reference files are so scientific and reasonable that you can buy them safely.

## Nutanix NCP-EUC Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Describe Nutanix Technologies and Solutions</li> <li>Given a scenario, determine how to troubleshoot a Nutanix EUC environment</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Given business requirements, determine an appropriate EUC configuration</li> <li>Troubleshoot, Optimize, and Scale a Nutanix EUC Implementation</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Demonstrate an understanding of the properties of Citrix, Horizon, and Nutanix Solutions</li> <li>Configure and Operate a Nutanix EUC Environment</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Describe the role of Nutanix technologies in an EUC implementation</li> <li>Given a scenario, determine how to optimize a Nutanix EUC environment</li> </ul>

Nutanix NCP-EUC Certification Exam covers a range of topics, including Nutanix infrastructure components, virtualization technologies, desktop and application virtualization, network infrastructure, and security. Candidates need to demonstrate their knowledge of Nutanix Acropolis, AHV, Prism, Citrix Virtual Apps and Desktops, VMware Horizon, and Microsoft Remote Desktop Services. NCP-EUC exam consists of 60 multiple-choice questions and lasts for 90 minutes. Candidates need to score at

least 300 out of 500 to pass the exam and earn the Nutanix NCP-EUC certification.

## **NCP-EUC Valid Study Materials & NCP-EUC Reliable Test Forum**

ITExamSimulator Nutanix NCP-EUC certification training dumps have an advantage over any other exam dumps. Because this is the exam dumps that can help you pass NCP-EUC certification test at the first attempt. High passing rate of ITExamSimulator questions and answers is certified by many more candidates. ITExamSimulator Nutanix NCP-EUC Practice Test materials are the shortcut to your success. With the exam dumps, you can not only save a lot of time in the process of preparing for NCP-EUC exam, also can get high marks in the exam.

The NCP-EUC certification exam covers various topics related to EUC solutions, such as desktop and application virtualization, endpoint management, user environment management, and application layering. NCP-EUC exam is designed to assess the candidate's ability to design, deploy, and manage EUC solutions using Nutanix technologies. The NCP-EUC Certification is an industry-recognized credential that demonstrates the candidate's expertise in managing EUC solutions using Nutanix technologies.

## **Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q160-Q165):**

### **NEW QUESTION # 160**

A group of developers are migrating from physical computers to persistent virtual desktops. What is the recommended migration path?

- A. Convert the developers profile to a roaming profile.
- **B. Convert the physical computers to virtual desktops,**
- C. Deploy non-persistent desktops and install required applications.
- D. Deploy a base image and provision required hosted applications

**Answer: B**

Explanation:

persistent virtual desktops are virtual desktops that retain their state and configuration across sessions.

This means that users can customize their virtual desktops with their own applications, settings, and data, and have them available every time they log on.

Persistent virtual desktops are suitable for users who need a consistent and personalized experience, such as developers.

According to Nutanix best practices<sup>2</sup>, one of the recommended migration paths for persistent virtual desktops is to convert the physical computers to virtual desktops.

This can be done by using a tool such as VMware Converter or Microsoft Disk2vhd to create a virtual disk image of the physical computer's hard drive.

Then, this image can be imported into Nutanix Cloud Platform and used as a base image for creating persistent virtual desktops.

This migration path can preserve the existing applications, settings, and data of the physical computers and minimize the disruption for the users.

### **NEW QUESTION # 161**

An administrator has been evaluating a performance issue with the current Citrix VDI solution on Nutanix. During the evaluation, the administrator finds out there is a feature that is enabled called Shadow Clones.

What would happen if an administrator disabled Shadow Clones within a company's VDI environment?

- A. Deployment times would decrease when deploying additional desktops.
- **B. Deployment times would increase as the number deployed desktops increase,**
- C. Boot storms would be eliminated because the number of desktops would be throttled.
- D. Boot storms would be eliminated due to desktop resource contention.

**Answer: B**

Explanation:

Nutanix's Shadow Clones feature is used to create linked clones or snapshots of base VMs, which can improve VM provisioning time and storage efficiency by reducing the amount of duplicated data.

If an administrator disables Shadow Clones within a company's VDI environment, it is likely that deployment times would increase as the number of deployed desktops increases. This is because linked clones or snapshots would no longer be used, so each new desktop deployment would require creating a full copy of the base VM.

Nutanix Shadow Clones allow for distributed caching of a particular disk or VM data, which are in a 'multi-reader' scenario. This can help in scenarios such as VDI or private clone boot storms, where VMs on multiple nodes read from the same set of base disks<sup>12</sup>

#### NEW QUESTION # 162

An organization has decided to leverage the Security Configuration Management Automation (SCMA) framework to continuously inspect services for deviations from established security policies. How does Nutanix keep these scans from impacting cluster performance?

- A. SCMA inconsistencies aren't reverted.
- B. SCMA is fully managed by Prism Central.
- C. SCMA checks are bypassed by STIG.
- **D. SCMA has a low system priority.**

**Answer: D**

Explanation:

Nutanix leverages the Security Configuration Management Automation (SCMA) framework to ensure that services are constantly inspected for variance to the security policy. This framework checks multiple security entities for both Nutanix storage and AHV, automatically reporting log inconsistencies and reverting them to the baseline where applicable.

To prevent these continuous inspections from negatively affecting the cluster's operation, the Nutanix Security Guide specifies that STIG (Security Technical Implementation Guide) scans have the lowest system priority within the virtual storage controller. This design ensures that security checks do not interfere with platform performance or user workloads, regardless of whether the schedule is set to run hourly, daily, weekly, or monthly.

#### NEW QUESTION # 163

A new large multisite environment is being designed with a requirement to focus on workload availability and failover while reducing the brokering infrastructure footprint and management. Infrastructure components that are deployed must follow vendor recommendations for high availability and redundancy.

Which Citrix control plane should be used and where should they be deployed in this scenario?

- A. Citrix VAD with highly available delivery controllers on AHV workload clusters in each site
- B. Citrix VAD with highly available delivery controllers on AHV infrastructure clusters in each site
- **C. Citrix DaaS with highly available cloud connectors on AHV infrastructure clusters in each resource location**
- D. Citrix DaaS with highly available cloud connectors on AHV workload clusters in each resource location

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix Validated Designs (NVD) for Citrix DaaS:

\* Control Plane: The requirement to "reduce brokering infrastructure footprint" dictates the use of Citrix DaaS (formerly Citrix Cloud), which offloads the Delivery Controllers and SQL databases to the Citrix cloud service, leaving only the lightweight Cloud Connectors on-premises.

\* Placement: In a large multisite architecture using the standard "Block and Pod" design, Nutanix recommends separating Management/Infrastructure functions from Workload functions.

\* Best Practice: Cloud Connectors are critical infrastructure components. They should be deployed on the AHV Infrastructure Clusters (Management Clusters) in each resource location, rather than the Workload clusters, to ensure they are protected from resource contention caused by user desktops and to maintain a clean separation of duties.

#### NEW QUESTION # 164

An administrator has a 3-node ESXi-based Nutanix cluster where one host has an NVIDIA GPU installed.

The administrator is planning to perform an ESXi upgrade using Nutanix Life Cycle Manager (LCM) and requires the NVIDIA vGPU-enabled VM to remain online throughout the maintenance window.

What should the administrator do to successfully complete this task?

- A. Hot-swap the GPU between hosts.
- **B. Install a GPU in a second host.**
- C. Temporarily disable the vGPU.
- D. Configure VMware HA and DRS.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix LCM and NVIDIA vGPU operational best practices:

\* Live Migration Requirement: To keep a VM "online" during a host upgrade, the VM must be live-migrated (vMotioned) off the host entering maintenance mode.

\* vGPU Constraint: A VM configured with a vGPU profile cannot be live-migrated to a host that does not have a compatible physical GPU resource available.<sup>4</sup> The destination host must have a GPU capable of hosting the specific vGPU profile.

\* The Solution: Since only one host currently has a GPU, there is no valid destination for the VM to migrate to. The administrator must install a GPU in a second host to create a valid migration target.

This allows the VM to vMotion to the second host, keeping it online while the first host is upgraded.
