Adobe Commerce Developer Expert Sample Questions (Q10-Q15):

NEW QUESTION # 10

A Developer creates daily cron jobs to automate a client's business processes, including automated stock imports via CSV files once per day. After a few days, it is noted that the cron jobs do not run daily. The Developer discovers the cron jobs are sometimes assigned a 'missed' status and do not execute, and other cron jobs become stuck during the execution time of the custom cron jobs. Which option should the Developer use to ensure the cron jobs consistently run each day?

- A. Implement a custom group for the cron jobs in the crontab.xml.
- B. Set the cron jobs to run multiple times per day instead of once daily.
- C. In the execute() function, implement a lock checker to make sure the cron runs alone.

Answer: A

NEW QUESTION # 11

An Adobe Commerce Developer creates a module that adds a product attribute via a data patch.

Adhering to best practices, how should the Developer remove this product attribute when the module is uninstalled?

- A. Make the patch implement `Magento\Framework\Setup\Patch\PatchRevertableInterface` with the `revert()` method in it.
- B. Delete the custom attribute directly from the database.
- C. Create a new CLI command that needs to be executed before the `bin/magento module:uninstall Vendor_ModuleName`.

Answer: A

Explanation:

The recommended best practice is to use the `PatchRevertableInterface` when creating data patches. This interface defines a `revert()` method, which is executed during module uninstall, ensuring that added entities (such as product attributes) are properly removed.

B (deleting from database directly) is strongly discouraged and violates upgrade safety.

C (creating a CLI command) is unnecessary; uninstallation should be handled within the patch itself.

NEW QUESTION # 12

A multi-source merchant asks an Adobe Commerce Developer to prioritize inventory source selection based on shipping address and minimal delivery cost.

How should the Developer implement this task functionality?

- A. Use Source Priority Algorithm and utilize GetSourceSelectionAlgorithmList.
- B. Register New Source Selection Algorithms via di.xml and implement SourceSelectionInterface.
- C. **Configure Distance Priority Algorithm and implement PlaceReservationsForSalesEventInterface.**

Answer: C

NEW QUESTION # 13

A Developer discovers that inline scripts are no longer working. This issue occurred after upgrading to the latest version of Adobe Commerce. When checking the console, the errors indicate that the scripts are not allowed to execute. The following is an example script:

```
<div id="action-div" onclick="someComponent('title')>Action</div>
```

How should the Developer adapt the script to run properly according to security practices?

- A. `<?php echo $block->renderAllowedElement('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`
- B. `<?php echo $escaper->renderSecureTag('<div id="action-div" onclick="someComponent(\'title\')">Action</div>'); ?>`
- C. **`<?php echo $secureRenderer->renderEventListenerAsTag('onclick', 'someComponent(\'title\')', '#action-div'); ?>`**

Answer: C

NEW QUESTION # 14

A Developer discovers the following code snippet in default.xml layout:

```
<referenceBlock name="content">
<block name="custom" template="example.phtml" cacheable="false" />
</referenceBlock>
```

Which caching behavior will occur?

- A. Only the custom block will not be cached.
- **B. All pages will be marked as non-cacheable.**
- C. The content block and all its child blocks will become cacheable.

Answer: B

Explanation:

In Magento, if any block within the page layout is marked `cacheable="false"`, the entire page becomes non-cacheable. This means that full-page caching (FPC) will be disabled for all pages containing that block.

Option A is incorrect: cacheability is applied at the page level, not per block.

Option C is misleading: cacheable blocks remain cacheable only if no non-cacheable blocks are present.
