2026 Updated USGBC LEED-Green-Associate: LEED Green Associate Exam High Passing Score

If you just free download the demos of our LEED-Green-Associate exam questions, then you will find that every detail of our LEED-Green-Associate study braindumps is perfect. Not only the content of the LEED-Green-Associate learning guide is the latest and accurate, but also the displays can cater to all needs of the candidates. It is all due to the efforts of the professionals. These professionals have full understanding of the candidates' problems and requirements hence our LEED-Green-Associate training engine can cater to your needs beyond your expectations.

USGBC LEED Green Associate Exam Sample Questions (Q106-Q111):

NEW QUESTION # 106

When considering water conservation and water-efficient landscaping, which two types of water would be most useful for landscape irrigation?

- A. Potable water
- B. Blackwater
- C. Clean water
- D. Rainwater

Answer: D

Explanation:

The Guide specifies:

"Use nonpotable water for irrigation such as captured rainwater, graywater or municipally reclaimed wastewater..." Potable water

use is discouraged, and blackwater cannot be used unless treated.

NEW QUESTION # 107

All LEED rating systems include:

- A. 100 base points, plus six Innovation points and four Regional Priority points for a total of 110 points
- B. 110 base points, plus five Innovation points and two Regional Priority points for a total of 117 points
- C. 110 base points, plus six Innovation points and four Regional Priority points for a total of 120 points
- D. 90 base points, plus four Innovation points and six Regional Priority points for a total of 100 points

Answer: A

Explanation:

LEED rating systems are designed with 100 base points for core credits, six bonus points for Innovation, and four bonus points for Regional Priority credits. This structure allows projects to achieve a total of 110 points, reflecting LEED's flexibility and comprehensive approach.

NEW QUESTION # 108

What is process water?

- A. Domestic waste water composed of wash water from kitchens and bathrooms
- B. Water used for industrial processes and building systems, such as cooling towers and chillers
- C. Blackwater used for irrigation purposes
- D. Spent or used water from a home, community, farm or industry that contains dissolved or suspended matter

Answer: B

Explanation:

Explanation

process water is water that is used for specific processes in industries, businesses, or buildings. Process water can include water used for cooling, heating, washing, rinsing, sterilizing, humidifying, or other purposes. Process water can also include water used for building systems, such as cooling towers, boilers, chillers, or irrigation¹²³.

Process water is different from domestic water, which is water used for human consumption or hygiene, such as drinking, cooking, bathing, or flushing toilets. Process water is also different from wastewater, which is water that has been contaminated by human or industrial activities and requires treatment before being discharged or reused²⁴.

Process water is an important aspect of water efficiency in LEED certification. LEED v4.1 offers credits for optimizing process water use by reducing the demand or increasing the use of alternative sources of water, such as rainwater, graywater, or reclaimed water

NEW QUESTION # 109

The project team is conducting a feasibility study of a building project. The developer has pre-qualified four potential sites that are all financially viable. Within the context of LEED, which site is the most applicable?

- A. A brownfield site with no access to metro
- B. A brownfield site in a national park with car access only
- C. A greenfield site with access to public transport and proximity to grocery stores
- D. A brownfield site with access to five lines of public transportation and basic services

Answer: D

NEW QUESTION # 110

The LEED credits given the greatest weights are credits that

- A. most directly address the most important environmental impacts and human benefits
- B. contribute to developmental density and Sustainable Sites
- C. are used in certifying a LEED Platinum Project

- D. are included in the LEED for Buildings Operations and Maintenance: Existing Buildings rating system

Answer: A

Explanation:

Explanation

LEED credits are weighted based on their potential environmental impacts and human benefits. Those that most directly address these areas are given greater weight in the scoring system. This approach is intended to prioritize actions that have the greatest positive impact on critical environmental issues such as climate change, water resources, biodiversity, air pollution, and human health.
