### SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q23-Q28):

#### NEW QUESTION # 23

Which SAP AI solutions are used for fraud detection and risk assessment?

There are 2 correct answers to this question.

Response:

- A. SAP AI Business Services
- B. SAP SuccessFactors Learning
- C. SAP Extended Warehouse Management
- D. SAP Predictive Analytics

Answer: A,D

#### NEW QUESTION # 24

Which SAP AI solution helps optimize supply chain operations?

Please choose the correct answer.

Response:

- A. SAP AI for Supply Chain
- B. SAP Business Workflow
- C. SAP AI Core
- D. SAP Digital Assistant

Answer: A

#### NEW QUESTION # 25

(What is Deep Learning?)

- A. AI systems that use self-supervised learning on vast data to perform a variety of tasks, such as writing documents or creating images.
- B. A branch of Machine Learning that uses multi-layered neural networks to analyze complex data patterns that may employ different learning methods.
- C. A technology that equips machines with human-like capabilities such as problem-solving, visual perception, speech recognition, decision-making, and language translation.
- D. A subset of AI that focuses on enabling computer systems to learn and improve from experience or data, incorporating elements from fields like computer science, statistics, and psychology.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: Deep Learning is a branch of Machine Learning that utilizes multi-layered neural networks to analyze and interpret complex data patterns, often employing various learning methods such as supervised, unsupervised, or reinforcement learning. This distinguishes it from broader AI definitions, general machine learning, or specific foundation model applications.

Exact extracts supporting this:

"Deep learning is the specialized subtype of machine learning that processes and interprets the complex inputs, including visual data from..."sap.com

"Deep learning (DL) is a data-centric subset of machine learning that uses neural networks with multiple (deep) layers to learn and extract features from..."sap.com

"Unlike machine learning algorithms that rely heavily on structured data inputs, deep learning models can effectively process

unstructured data ..."community.sap.com Other options are incorrect because:

Option A: This describes artificial intelligence (AI) in general, which encompasses human-like capabilities across various domains.

Option B: This defines machine learning (ML), the broader field focused on learning from data without explicit programming.

Option D: This refers to foundation models or generative AI systems that use self-supervised learning for multi-modal tasks.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Sourced from the official SAP resource "What is deep learning? | SAP" and SAP Learning course "Summarizing AI," which position deep learning as a subset of machine learning within SAP Business AI frameworks. Additional support from SAP Community blogs on understanding AI, ML, and DL, aligned with C\_BCBAI\_2502 certification materials for explaining AI concepts in business contexts.

#### NEW QUESTION # 26

A multinational company wants to implement AI-based fraud detection for its financial transactions. Which SAP AI solutions should they use? Note: There are 3 correct answers to this question.

- A. SAP Intelligent RPA
- B. SAP Cloud ERP
- C. SAP AI Business Services
- D. SAP Predictive Analytics
- E. SAP SuccessFactors AI

**Answer: A,C,D**

Explanation:

For a multinational company seeking AI-based fraud detection in financial transactions, SAP offers solutions that leverage machine learning and automation to identify and mitigate fraudulent activities. The correct answers are SAP AI Business Services, SAP Predictive Analytics, and SAP Intelligent RPA, as these solutions directly support fraud detection in financial processes.

SAP documentation explains: "SAP AI solutions can detect anomalies and patterns in financial transactions, procurement processes, and other business operations to identify potential fraud and risks." SAP AI Business Services provide "machine learning capabilities for fraud detection in finance," enabling real-time monitoring of transactions to identify suspicious activities. SAP Predictive Analytics, embedded in SAP S/4HANA, supports "AI-assisted anomaly detection" to "predict and identify unusual patterns in financial data," such as fraudulent transactions, enhancing security. SAP Intelligent RPA automates "transaction monitoring and validation processes," using AI to flag potential fraud by cross-referencing data against predefined rules, as seen in financial reconciliation workflows.

The incorrect options-SAP SuccessFactors AI and SAP Cloud ERP-are not relevant. SAP SuccessFactors AI focuses on HR processes, such as recruitment, not financial fraud detection. SAP Cloud ERP is a broad platform that may include AI but is not specifically tailored for fraud detection compared to the selected solutions. SAP's financial AI solutions, as evidenced by their use in SAP Cash Application, confirm the suitability of the chosen answers.

#### NEW QUESTION # 27

Which AI-driven tools are available in SAP S/4HANA?

There are 2 correct answers to this question.

Response:

- A. Isolated financial processes without AI
- B. AI-powered invoice processing
- C. Manual risk assessment
- D. Predictive analytics for financial forecasting

**Answer: B,D**
