Arch-303受験対策解説集、Arch-303資格勉強

皆が知っているように、試験はほとんどの学生にとって難しい問題ですが、テストArch-303認定を取得し、関連する証明書を取得することは、労働者にとって非常に重要です。ただし、幸いなことに、この種の問題を心配する必要はありません。最良のソリューションであるArch-303実践教材を見つけることができるからです。当社の技術と継続的な投資と研究の補助設備により、当社の将来は明るいです。Arch-303学習ツールには多くの利点があり、Arch-303試験問題の合格率は99%~100%です。。

Salesforce Certified B2C Commerce Architect 認定 Arch-303 試験問題 (Q45-Q50):

質問 # 45

A developer is remotely fetching the reviews for a product.

Assume that it's an HTTP GET request and caching needs to be implemented, what consideration should the developer keep in mind for building the caching strategy?

- A. Use custom cache
- B. Remote include with caching only the reviews
- C. Cache the HTTP service request
- **D. Cached remote include with cache of the HTTP service**

正解: D

解説:

For efficient caching of HTTP GET requests used to fetch product reviews, the best practice is to use a cached remote include combined with caching of the HTTP service itself (Answer D). This method involves caching the output of the remote service call at the service layer and reusing it for subsequent requests. This approach minimizes the number of calls to the remote service, reduces load times, and ensures that the displayed reviews are up-to-date as per the cache's freshness settings. It optimally balances the performance benefits of caching with the need to keep content like reviews current.

質問 # 46

Northern Trail Outfitters (NTO) just went live after migrating its online shop to B2C Commerce from a custom eCommerce platform. NTO now needs to migrate its orders. NTO cannot provide a B2C Commerce feed, but a custom export from its current eCommerce site.

What are the correct steps to migrate these orders to B2C Commerce?

- **A. Receive the orders file and use a Job to generate the orders in B2C Commerce schema. Create a B2C Commerce Support ticket to ask them to Import the orders.**
- B. Create a B2C Commerce Support ticket and ask them to import the order files received from Northern Trail Outfitters.
- C. Receive the orders file and use a job to generate the orders in B2C Commerce schema. Ask the client to import them on production before the launch.
- D. Receive the orders file and use a Job to place new orders in B2C Commerce with the order data received.

正解: A

解説:

For migrating historical orders from a custom eCommerce platform to B2C Commerce:

* Option D: Involves receiving the exported order file, processing it into the B2C Commerce schema to ensure compatibility, and then coordinating with B2C Commerce Support for importing these orders into the live environment. This process ensures that the orders are correctly formatted and integrated, maintaining data integrity and continuity of business analytics and records.

This approach is essential for a successful migration that maintains the operational and historical integrity of order data within the new platform.

質問 # 47

A company manages its regional operations as separate businesses. The regional sites (Site A and Site B) operate with:

- * Separate realms
- * Different code bases
- * Different category navigation menus
- * Frequent updates on category structure

The requirement from the business is to provide hreflang link tags on category pages pointing to the same category on the other regional site. Example HTML for one of these links as displayed on Site A is:

Which solution should the Architect choose while keeping performance in mind?

- A. Create a new custom attribute on the Category. Populate the attribute with the other entire site URLs corresponding to locales in JSON Format. Use the attribute to display the hreflang link tag.
- **B. Create a new custom object type. Populate the hreflang mapping for each category and locale in this custom object. Use the custom object to display the hreflang link tag.**
- C. Create a custom Business Manager module. Ask the business to maintain the hreflang link tags for each regional site in this Business Manager module.
- D. Create additional locales in all realms. Create a new custom attribute on the category that is localized.

Populate the attribute with the other site URLs and use it to display the hreflang tag.

正解: B

解説:

For a multi-regional setup with different realms and frequent updates, using a custom object to manage hreflang mappings offers flexibility and scalability. Custom objects can efficiently store URL mappings for each category across different locales, making it easier to manage and update as category structures change.

This method allows for centralized control over hreflang mappings and simplifies maintenance compared to other options which might involve more complex integrations or manual updates.

質問 # 48

The client provided these business requirements:

* The B2C Commerce storefront will integrate with the client's Order Management System (OMS).

* The storefront will provide real-time order export of successfully pieced orders. The OMS supports both web service export and SFTP batch order export, but the client has expressed concern about the availability of the OMS.

Which two solutions satisfy the requirements and address the OMS reliability concern?

Choose 2 answers

- A. Implement a batch export of orders via web service, excluding exported orders. This runs as a scheduled job with an hourly run rate and marks processed orders as exported upon success.
- B. Implement a live export of orders during checkout via web service, marking the processed order as exported when the AM returns successfully.
- C. Implement a live export of orders during checkout via SFTP, marking the processed order as exported when it has completed successfully.
- D. Implement a batch export of orders to SFTP, excluding exported orders. This runs as a scheduled job with a high-frequency run rate and marks processed orders as exported upon success.

正解: A、D

解説:

Given the concerns about the reliability of the OMS, implementing scheduled batch exports ensures that order data is not lost due to potential OMS downtime and allows for reattempting failed exports. Option B uses SFTP for a high-frequency batch export, which can be scheduled to run multiple times a day, ensuring minimal delay in order synchronization while marking orders as exported upon successful transmission.

Option C provides a similar safeguard but via web service, which can be scheduled to run hourly. Both methods enable tracking of export status and can handle temporary downtimes by reattempting the export until successful, aligning with the need for reliability in integration processes.

質問 # 49

A new version of the Page Show controller is required for implementation of Page Designer specific look. It requires implementation of a specific cache period for Page Designer pages, which is not currently available in the base Storefront Reference Architecture (SFRA) cache.js module. What two steps should the Architect instruct the developer to implement?

Choose 2 answers

- A. Create new cache.js in client's cartridge. Extend cache.js from app_storefront_base and add a function for the Page Designer caching.
- B. Create new cache.js in client's cartridge. Copy cache.js from app_storefront_base and add a function for the Page Designer caching.
- C. Create new Page.js controller in client's cartridge. Extend the code from base and prepend the new cache middleware function to Page-Show route.
- D. Create new Page.js controller in client's cartridge. Copy code from base and modify the Page-Show route to include the new cache middleware function.

正解: A、D

解説:

To implement a specific cache period for Page Designer pages in SFRA:

* Option A involves creating a new Page.js controller in the client's cartridge, where the existing Page-Show route can be modified

to include a custom caching logic. This ensures that the specific caching requirements for Page Designer pages are met without altering the base functionality for other pages.

* Option D calls for extending the existing cache.js module in the client's cartridge to include a function specifically for Page Designer caching. This allows for reusing the existing caching logic while adding enhancements specific to the Page Designer pages, thus maintaining efficiency and clarity in the codebase.

Both options provide a clean, maintainable approach to customizing caching for specific requirements in SFRA, avoiding disruptions in other areas of the site functionality.
