With this kind of version, you can flip through the pages at liberty and quickly finish the check-up Professional-Cloud-Developer Test Prep. What's more, a sticky note can be used on your paper materials, which help your further understanding the knowledge and review what you have grasped from the notes.

Google Certified Professional - Cloud Developer Sample Questions (Q14-Q19):

NEW QUESTION # 14

You work for an organization that manages an ecommerce site. Your application is deployed behind a global HTTP(S) load balancer. You need to test a new product recommendation algorithm. You plan to use A/B testing to determine the new algorithm's effect on sales in a randomized way. How should you test this feature?

- **A. Split traffic between versions using weights.**
- B. Use HTTP header-based routing
- C. Enable the new recommendation feature flag on a single instance.
- D. Mirror traffic to the new version of your application.

Answer: A

Explanation:

NEW QUESTION # 15

You are developing an application that will store and access sensitive unstructured data objects in a Cloud Storage bucket. To comply with regulatory requirements, you need to ensure that all data objects are available for at least 7 years after their initial creation. Objects created more than 3 years ago are accessed very infrequently (less than once a year). You need to configure object storage while ensuring that storage cost is optimized. What should you do? (Choose two.)

- A. Enable Object Versioning to prevent objects from being accidentally deleted for 7 years after object creation.
- **B. Create an object lifecycle policy on the bucket that moves objects from Standard Storage to Archive Storage after 3 years.**
- C. Implement a Cloud Function that checks the age of each object in the bucket and moves the objects older than 3 years to a second bucket with the Archive Storage class. Use Cloud Scheduler to trigger the Cloud Function on a daily schedule.
- **D. Set a retention policy on the bucket with a period of 7 years.**
- E. Use IAM Conditions to provide access to objects 7 years after the object creation date.

Answer: B,D

NEW QUESTION # 16

You developed a JavaScript web application that needs to access Google Drive's API and obtain permission from users to store files in their Google Drives. You need to select an authorization approach for your application. What should you do?

- A. Create a SAML token.
- **B. Create an OAuth Client ID.**
- C. Create an API key.
- D. Create a service account.

Answer: B

Explanation:

<https://developers.google.com/drive/api/guides/api-specific-auth>

NEW QUESTION # 17

You are developing a JPEG image-resizing API hosted on Google Kubernetes Engine (GKE). Callers of the service will exist within the same GKE cluster. You want clients to be able to get the IP address of the service. What should you do?

- A. Define a GKE Service. Clients should use the name of the A record in Cloud DNS to find the service's cluster IP address.
- **B. Define a GKE Endpoint. Clients should get the endpoint name from the appropriate environment variable in the client container.**
- C. Define a GKE Service. Clients should use the service name in the URL to connect to the service.
- D. Define a GKE Endpoint. Clients should get the endpoint name from Cloud DNS.

Answer: B

Explanation:

NEW QUESTION # 18

Your existing application keeps user state information in a single MySQL database. This state information is very user-specific and depends heavily on how long a user has been using an application. The MySQL database is causing challenges to maintain and enhance the schema for various users. Which storage option should you choose?

- A. Cloud Datastore/Firestore
- **B. Cloud SQL**
- C. Cloud Storage
- D. Cloud Spanner

Answer: B

Explanation:
