

Quiz 2026 Oracle 1z1-076: Unparalleled Exam Oracle Database 19c: Data Guard Administration Passing Score

P.S. Free & New 1z1-076 dumps are available on Google Drive shared by RealExamFree: <https://drive.google.com/open?id=1okoV5bhzRDac3PPcipSVfXA0FsBot1K>

Do you often envy the colleagues around you can successfully move to a larger company to achieve the value of life? Are you often wondering why your classmate, who has scores similar to yours, can receive a large company offer after graduation and you are rejected? In fact, what you lack is not hard work nor luck, but 1z1-076 Guide question. If you do not have extraordinary wisdom, do not want to spend too much time on learning, but want to reach the pinnacle of life through 1z1-076 exam, then you must have 1z1-076 question torrent.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 2	<ul style="list-style-type: none">Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.
Topic 3	<ul style="list-style-type: none">Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 4	<ul style="list-style-type: none">Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 5	<ul style="list-style-type: none">Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 6	<ul style="list-style-type: none">Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 7	<ul style="list-style-type: none">Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.

Valid Dumps 1z1-076 Book - 1z1-076 Test Questions Answers

The Oracle 1z1-076 exam PDF is the collection of real, valid, and updated Oracle 1z1-076 practice questions. The Oracle 1z1-076 PDF dumps file works with all smart devices. You can use the 1z1-076 PDF Questions on your tablet, smartphone, or laptop and start 1z1-076 exam preparation anytime and anywhere.

Oracle Database 19c: Data Guard Administration Sample Questions (Q51-Q56):

NEW QUESTION # 51

Which two are true about the use of RMAN recovery catalogs when offloading backups to a physical standby database?

- A. It is not necessary to use a recovery catalog unless a far sync instance is used to route redo to the physical standby database.
- B. The primary and physical standby databases must be registered separately in the recovery catalog, if a far sync instance is used to route redo to the physical standby database.
- C. The physical standby database may be used to register the database in the recovery catalog, if the primary is not registered.
- D. It backups that are offloaded to a physical standby database are taken when not connected to a recovery catalog, then they may still be used for restoration on the primary database.
- E. Primary and physical standby databases may use different virtual recovery catalogs in the same physical recovery catalog.

Answer: D,E

NEW QUESTION # 52

You are planning to perform block comparison using the dbms comp package:

Which TWO statements are true?

- A. It requires that the DB_LOST_WRITE_protect initialization parameter be enabled.
- B. The databases should be at least mounted before block comparison.
- C. It can be used to detect lost writes and inconsistencies between the primary database and the cascaded standbys.
- D. Logical standby databases can be the target database for the dbms_dbcomp.dbcomp procedure.
- E. You can monitor the progress of an ongoing block comparison operation by querying VS SESSION_LONGOPS.

Answer: B,E

Explanation:

The DBMS_COMPARISON package, used for comparing and converging data objects within a single database or between databases, requires that the databases involved in the block comparison be at least mounted (A). This allows the procedure to access the data blocks for comparison. Additionally, the progress of long-running operations such as block comparison can be monitored using the dynamic performance view V\$SESSION_LONGOPS (D), which provides information on the operation's progress and estimated completion time.

References: Oracle Database PL/SQL Packages and Types Reference provides comprehensive details on the DBMS_COMPARISON package, including its procedures and how to monitor their progress. Additionally, Oracle Database Reference explains the V\$SESSION_LONGOPS view, which is commonly used for monitoring long operations in the database.

NEW QUESTION # 53

Examine the procedure that you plan to execute on your logical standby:

SQL> EXECUTE DBMS_LOGSTDBY.SKIP(stmt => 'DML', schema_name => 'HR', object_name => 'EMPLOYEE'); What is a prerequisite for execution of this procedure?

- A. Execute the DBMS_LOGSTDBY.APPLY_SET procedure to record errors that might cause SQL Apply to stop.
- B. Stop redo transport to the logical standby database.
- C. Change the redo transport mode if necessary to ASYNC.
- D. Stop SQL Apply on the logical standby database.

Answer: D

NEW QUESTION # 54

There are currently 6 applier and 6 pfile processes running and no idle applier processes on a logical standby database. The max_SERVERS SQL apply parameter and number of archiver processes are both set to 12. Identify two changes, each of which would allow you to increase the number of applier processes.

- A. Increase the parallel_max_server initialization parameter.
- B. Increase the processes initialization parameter. D Decrease the number of FREPARER processes.
- C. Decrease the number of archiver processes on the standby database.
- D. Increase the value for the MAX_SERVERS SQL apply parameter.
- E. Increase the RECOVERY_PARALLEL initialization parameter.

Answer: A,D

Explanation:

To increase the number of applier processes on a logical standby database, the following changes can be made:

* C: Increasing the value for the MAX_SERVERS SQL apply parameter would allow for more applier processes to be initiated, assuming that system resources permit.

* D: Increasing the PARALLEL_MAX_SERVERS initialization parameter would allow for more parallel execution processes, which can be used by SQL apply to increase the number of applier processes.

Option A is incorrect as decreasing the number of archiver processes will not necessarily increase the number of applier processes; these are unrelated components.

Option B is incorrect because the 'FREPARER' processes do not exist, it seems to be a typographical error, and the 'REPARER' is not a valid Oracle process or parameter.

Option E is incorrect because the RECOVERY_PARALLELISM parameter controls the number of processes used for instance recovery and media recovery, not for SQL apply.

References: Oracle Data Guard Concepts and Administration guide details the configuration and tuning of SQL apply-related parameters in logical standby databases.

NEW QUESTION # 55

Which two are prerequisites for configuring flashback database for Oracle 19c databases, in a Data Guard environment?

- A. The Data Guard real-time apply feature must be enabled.
- B. The database must be in ARCHIVELOG mode.
- C. A fast recovery area must be configured.
- D. The data guard broker must be used.
- E. A far sync instance must be configured to flash back a standby when the primary has been flashed back.

Answer: B,C

Explanation:

* A fast recovery area must be configured (B): Flashback Database requires a fast recovery area to be set up because flashback logs are stored there. The fast recovery area is a unified storage location for all recovery-related files and activities.

* The database must be in ARCHIVELOG mode (C): Flashback Database operation relies on the ability to archive redo logs. Therefore, the database must be running in ARCHIVELOG mode for Flashback Database to be enabled.

NEW QUESTION # 56

.....

Taking these mock exams is important because it tells you where you stand. People who are confident about their knowledge and expertise can take these 1z1-076 practice tests and check their scores to know where they lack. This is good practice to be a pro and clear your Oracle Database 19c: Data Guard Administration (1z1-076) exam with amazing scores. RealExamFree practice tests simulate the real 1z1-076 exam questions environment.
