## 2V0-17.25 VMware Cloud Foundation 9.0 Administrator Exam For VCP-VCF Admin Certification

An introduction to the 2V0-17.25 exam for the VCP-VCF Admin certification and share free practice test.

2026 Latest PracticeMaterial 2V0-17.25 PDF Dumps and 2V0-17.25 Exam Engine Free Share: <https://drive.google.com/open?id=1be5pHzteQkJTombg8iPkDhtfj8Q7Gndm>

If you are searching for an easy and rewarding study content to get through the 2V0-17.25 Exam, you are at the right place to get success. Our 2V0-17.25 exam questions can help you pass the exam and achieve the according certification with ease. If you study with our 2V0-17.25 Practice Guide for 20 to 30 hours, then you will be bound to pass the exam with confidence. And the price for our 2V0-17.25 training engine is quite favourable. What are you waiting for? Just come and buy it!

The PDF version of our 2V0-17.25 learning guide is convenient for reading and supports the printing of our study materials. If client uses the PDF version of 2V0-17.25 exam questions, they can download the demos freely. If clients feel good after trying out our demos they will choose the full version of the test bank to learn our 2V0-17.25 Study Materials. And the PDF version can be printed into paper documents and convenient for the client to take notes.

## Braindumps 2V0-17.25 Torrent & 2V0-17.25 Reliable Study Plan

There may be some other study materials with higher profile and lower price than our products, but we can assure you that the passing rate of our 2V0-17.25 learning materials is much higher than theirs. And this is the most important. According to previous data, 98 % to 99 % of the people who use our 2V0-17.25 Training Questions passed the exam successfully. If you are willing to give us a trust on our 2V0-17.25 exam questions, we will give you a success.

## VMware Cloud Foundation 9.0 Administrator Sample Questions (Q37-Q42):

### NEW QUESTION # 37

An Administrator is configuring the network within their VCF management domain in preparation to deploy VMware Aria Suite Lifecycle.

What are the two types of virtual networks that the Administrator could configure to support the deployment? (Choose two.)

- A. VXLAN-backed Network Pools
- B. Overlay-backed NSX Segments
- C. VLAN-backed Port Groups
- D. VLAN-backed NSX Segments

**Answer: B,C**

Explanation:

VLAN-backed Port Groups are used in traditional network environments where VLANs are configured on the physical switches. These port groups can be configured in the management domain to support network connectivity.

Overlay-backed NSX Segments use NSX to create virtual networks overlaid on existing physical networks, which is essential for network virtualization and communication between virtual machines, especially in a VMware Cloud Foundation environment.

### NEW QUESTION # 38

Which of the following is the default file system used for virtual machine datastores on block storage in VMware vSphere?

- A. ZFS
- B. EXT4
- C. VMFS
- D. NFS

**Answer: C**

Explanation:

VMFS (Virtual Machine File System) is VMware's proprietary clustered file system for block-based storage. NFS is used for file-based storage, while ZFS and EXT4 are not native to ESXi for VMFS datastores.

### NEW QUESTION # 39

An administrator is responsible for the management of a VMware Cloud Foundation (VCF) environment and has been tasked with creating a new Organization in VCF Automation. The customer previously upgraded from VCF 5.2 and this is the first new Organization since their upgrade.

The following requirements have been provided for the additional Organization:

Onboard existing Virtual Machines (VM) for management through VCF Automation.

Use third-party integrations, including Tanzu Salt and Active Directory.

Deploy to Native Public Cloud (NPC) endpoints.

What action should the administrator take to complete the objective?

- A. Create the new Organization for All Applications using the VCF Operations Fleet Management API.
- B. Create the new Organization for All Applications within the VCF Automation Provider Management Portal.
- C. Create the new Organization for VM Applications using the VCF Automation API.

**Answer: B**

Explanation:

In VMware Cloud Foundation 9.0, the construct of VM Applications Organizations was deprecated in favor of All Applications Organizations. The documentation highlights this change:

"Organizations for All Applications provide a unified model for managing both VM and Kubernetes workloads. They support third-party integrations such as Tanzu Salt and Active Directory, and enable deployments to Native Public Cloud endpoints." Since the customer upgraded from VCF 5.2, their first new Organization after the upgrade must use the All Applications model. VM Applications Organizations (Option A) are legacy and do not support the full feature set such as NPC or third-party integrations. Option C is incorrect because the Fleet Management API is for monitoring and operational insights, not for creating Organizations. Therefore, the administrator must create the new Organization as an All Applications Organization in the VCF Automation Provider Management Portal.

### NEW QUESTION # 40

An organization needs to perform maintenance on a specific host in a vSAN cluster. An administrator is required to put the host into maintenance mode whilst ensuring that all VMs in the cluster remain accessible.

Which three steps should the administrator take to correctly set a vSAN host into maintenance mode?

(Choose three.)

- A. Navigate to the vSAN cluster in the vSphere Client and select the host.
- B. Select the "No Data Migration" option to speed up the process.
- C. Migrate all VMs manually from the host before enabling maintenance mode.
- D. Choose the "Ensure Accessibility" option to maintain data accessibility.
- E. Right-click the host and select "Enter Maintenance Mode."

**Answer: A,D,E**

Explanation:

The "Ensure Accessibility" option ensures that all data remains accessible during maintenance while minimizing the impact on performance and data migration.

The administrator must navigate to the vSAN cluster in the vSphere Client to select the host for maintenance mode. Right-clicking the host and selecting "Enter Maintenance Mode" is the standard action for placing a host into maintenance mode.

#### NEW QUESTION # 41

An administrator is tasked with resetting the identity management of a VMware Cloud Foundation (VCF) instance after initial configuration. Which two steps should the administrator perform? (Choose two.)

- A. Disable Single Sign-On.
- B. Reconfigure the VCF Single Sign-On.
- C. Delete all of the Single Sign-On configurations, including the identity broker configuration.
- D. Delete all of the Single Sign-On configurations, excluding the provisioned user and groups.
- E. Revert the VCF Single Sign-On configuration.

**Answer: B,C**

Explanation:

Resetting identity management in VCF requires removal of existing identity configurations, including external identity providers and the Identity Broker configuration. The VCF documentation states that to reset identity services, administrators must remove the SSO configuration, including broker settings, and then reconfigure SSO.

Option B ensures complete cleanup of identity integrations.

Option C re-establishes identity management with the correct configuration.

Disabling (D) or reverting (E) is not a supported reset method. Leaving provisioned users/groups (A) would not fully reset identity management.

#### NEW QUESTION # 42

.....

Compared to other products in the industry, 2V0-17.25 actual exam have a higher pass rate. If you really want to pass the exam, this must be the one that makes you feel the most. Our company guarantees this pass rate from various aspects such as content and service. Of course, we also consider the needs of users, 2V0-17.25 Exam Questions hope to help every user realize their dreams. The 99% pass rate of our 2V0-17.25 study guide is a very proud result for us. Buy 2V0-17.25 study guide now and we will help you. Believe it won't be long before, you are the one who succeeded!
