

# Quiz Salesforce - Plat-Dev-210 - The Best Valid Salesforce Certified Omnistudio Developer Test Simulator

P.S. Free & New Plat-Dev-210 dumps are available on Google Drive shared by Free4Dump: [https://drive.google.com/open?id=1KUlhbrY15IbA\\_rVgHF5Q2A3eRs8mlkJ](https://drive.google.com/open?id=1KUlhbrY15IbA_rVgHF5Q2A3eRs8mlkJ)

Our Plat-Dev-210 training prep was produced by many experts, and the content was very rich. At the same time, the experts constantly updated the contents of the study materials according to the changes in the society. The content of our Plat-Dev-210 study guide is definitely the most abundant. Before you go to the exam, our Plat-Dev-210 Exam Questions can provide you with the simulating exam environment. This not only includes the examination process, but more importantly, the specific content of the exam. In previous years' examinations, the hit rate of Plat-Dev-210 learning quiz was far ahead in the industry.

## Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Omniscritps: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Expression Sets &amp; Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.</li></ul>

## Plat-Dev-210 Exam Questions Answers - Free Plat-Dev-210 Pdf Guide

In order to let you have a deep understanding of our Plat-Dev-210 learning guide, our company designed the free demos for our customers. We will provide you with free demos of our study materials before you buy our products. If you want to know our Plat-

Dev-210 training materials, you can download them from the web page of our company. If you use the free demos of our Plat-Dev-210 study engine, you will find that our products are very useful for you to pass your Plat-Dev-210 exam and get the certification.

## Salesforce Certified Omnistudio Developer Sample Questions (Q59-Q64):

### NEW QUESTION # 59

Refer to the exhibit below.

In this Integration Procedure structure, which Send JSON Path should be used to send the output of the Action1 element to a Remote Action?

- A. Action1.BlockB.BlockA
- **B. BlockA.BlockB.Action1**
- C. Action1:BlockB:BlockA
- D. BlockA:BlockB:Action1

### Answer: B

Explanation:

In OmniStudio Integration Procedures, when you want to reference the output of an element in a nested block (e.g., for use in a Remote Action or another step), you must use dot notation that mirrors the block structure hierarchy.

In the exhibit:

\* Action1 is nested inside:

\* BlockB, which is nested inside:

\* BlockA

Therefore, the correct Send JSON Path to access the result of Action1 is:

CopyEdit

BlockA.BlockB.Action1

This format complies with the standard output reference syntax in Integration Procedures, which follows the pattern:

php-template

CopyEdit

<ParentBlock>.<ChildBlock>.<ActionElement>

Incorrect Options:

\* B. BlockA:BlockB:Action1 - Uses colons instead of dots. This is invalid syntax in JSON path resolution within Integration Procedures.

\* C. Action1:BlockB:BlockA - Incorrect order and invalid separators.

\* D. Action1.BlockB.BlockA - Incorrect order (reversed path).

Salesforce OmniStudio Developer Guide # Integration Procedure Element JSON Pathing Best Practices for Send JSON Path # Nested Blocks and Element Referencing

### NEW QUESTION # 60

A healthcare company wants to enable its subscribers to add, edit, or delete dependents related to their policy via their Community portal. The developer on the project decides to use an OmniScript.

How should the developer configure the OmniScript to provide this functionality?

- A. Use an Edit Block element configured with SOQL statements.
- B. Use a Text Block element and a Remote Action element.
- **C. Use an Edit Block element configured with Remote Actions.**
- D. Use an Input Block element and a Data Mapper Post Action element.

### Answer: C

Explanation:

In OmniStudio, the Edit Block element is purpose-built for allowing users to dynamically add, edit, or delete rows of related data, such as dependents under a policy. To save these changes, Remote Actions (typically backed by Apex or API) are used to process each record operation (Create/Update/Delete).

\* A. Use an Edit Block element configured with Remote Actions - Correct. This is the recommended and most scalable way to support CRUD operations in OmniScripts for collections (e.g., dependents).

The Edit Block provides UI-level support, while Remote Actions handle back-end interaction with Salesforce or external systems.

Incorrect Options:

- \* B. Text Block is for display purposes and cannot manage data input or backend actions.
- \* C. Input Block elements do not support row-level add/edit/delete functionality as Edit Blocks do.
- \* D. SOQL is a read-only query language and cannot be used to update or delete records directly within an OmniScript.

### NEW QUESTION # 61

A developer needs to create a list of cases for an account in a single Datable in a FlexCard. Like the one shown below.

□ How can the developer configure the FlexCard to display the case records in this way?

- A. Disable the Repeat Record feature on the FlexCard setup tab
- **B. Select the Repeatable Mode property on the data table elements**
- C. Enable the record Looping feature on the data table elements
- D. Enable the Repeat Records feature on the FlexCard Setup tab

**Answer: B**

Explanation:

The Repeatable Mode property on the data table elements allows the developer to display multiple records in a single data table. The Repeat Records feature on the FlexCard Setup tab is used to display multiple FlexCards for each record in a data source. The Record Looping feature on the data table elements is used to iterate over a list of records and perform actions on each record. The Overwrite Target for all Null input checkbox on the Account id field is used to overwrite the existing value in the target object with null if the input value is null.

### NEW QUESTION # 62

An integration Procedure uses an HTTP action to make a REST API call. The response from the REST API must be converted into a specific XML structure before sending it as an input to another external web service.

How should the developer configure the Integration Procedure to meet this requirement?

- A. Use a DataRaptor Extract and check the XML checkbox on the Output JSON Path.
- B. Use a Remote Action that calls the XMLStreamWriter class
- **C. Use a DataRaptor Transform to convert JSON to XML**
- D. Use a Remote Action that calls the XMLStreamReader class

**Answer: C**

Explanation:

According to the OmniStudio Developer Guide, "DataRaptor Transform actions can convert JSON to XML and vice versa." Therefore, the correct answer is C.

### NEW QUESTION # 63

A developer is creating a Flex Card for a new Community page. The FlexCard will display case information along with action to close the case and update the case. And it will be styled using the Community's theme.

What must be developer do to configure the FlexCard for deployment in a community?

- A. Add the FlexCard's API name to FlexCard Player component
- B. Set the Developer property in Card Configuration to "Community"
- C. Configure the Component visibility in the custom Component.
- **D. Set the Target property in publishing Options to the Community page"**

**Answer: D**

Explanation:

The Target property in publishing Options determines where the FlexCard will be displayed. Setting it to the Community page will make the FlexCard available in the community
