Test SAP-C02 Simulator Free - SAP-C02 Valid Test Camp

We guarantee you that our top-rated Amazon SAP-C02 practice exam will enable you to pass the Amazon SAP-C02 certification exam on the very first go. The authority of AWS Certified Solutions Architect - Professional (SAP-C02) SAP-C02 Exam Questions rests on its being high-quality and prepared according to the latest pattern.

Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q425-Q430):

NEW QUESTION # 425

A company consists of two separate business units. Each business unit has its own AWS account within a single organization in AWS Organizations. The business units regularly share sensitive documents with each other. To facilitate sharing, the company created an Amazon S3 bucket in each account and configured two-way replication between the S3 buckets. The S3 buckets have millions of objects.

Recently, a security audit identified that neither S3 bucket has encryption at rest enabled. Company policy requires that all documents must be stored with encryption at rest. The company wants to implement server-side encryption with Amazon S3 managed encryption keys (SSE-S3).

What is the MOST operationally efficient solution that meets these requirements?

- A. Create an AWS Key Management Service (AWS KMS) key in each account. Turn on server-side encryption with AWS KMS keys (SSE-KMS) on each S3 bucket by using the corresponding KMS key in that AWS account. Encrypt the existing objects by using an S3 copy command in the AWS CLI.
- B. Create an AWS Key Management Service (AWS KMS) key in each account. Turn on server-side encryption with AWS KMS keys (SSE-KMS) on each S3 bucket by using the corresponding KMS key in that AWS account. Use S3 Batch

Operations to copy the objects into the same location.

- C. Turn on SSE-S3 on both S3 buckets. Encrypt the existing objects by using an S3 copy command in the AWS CLI.
- D. Turn on SSE-S3 on both S3 buckets. Use S3 Batch Operations to copy and encrypt the objects in the same location.

Answer: D

Explanation:

"The S3 buckets have millions of objects" If there are million of objects then you should use Batch operations.

<https://aws.amazon.com/blogs/storage/encrypting-objects-with-amazon-s3-batch-operations/>

NEW QUESTION # 426

A gaming company created a game leaderboard by using a Multi-AZ deployment of an Amazon RDS database. The number of users is growing, and the queries to get individual player rankings are getting slower over time. The company expects a surge in users for an upcoming version and wants to optimize the design for scalability and performance.

Which solution will meet these requirements?

- A. Add a read-only replica to the RDS DB instance. Add an RDS Proxy database proxy.
- B. Stream the leaderboard data by using Amazon Kinesis Data Firehose with an Amazon S3 bucket as the destination. Query the S3 bucket by using Amazon Athena for the leaderboard.
- C. Keep the leaderboard data in the RDS DB instance. Provision a Multi-AZ deployment of an Amazon ElastiCache for Redis cluster.
- D. Migrate the database to Amazon DynamoDB. Store the leader different tables. Use Apache HiveQL JOIN statements to build the leaderboard

Answer: C

Explanation:

Explanation

NEW QUESTION # 427

A company is launching a web-based application in multiple regions around the world. The application consists of both static content stored in a private Amazon S3 bucket and dynamic content served by ECS containers behind an Application Load Balancer (ALB). The company requires that the static and dynamic application content be accessible through Amazon CloudFront only. Which combination of steps should a solutions architect recommend to restrict direct content access to CloudFront? (Select THREE)

- A. Update the S3 bucket ACL to allow access from the CloudFront distribution only
- B. Configure the ALB to add a custom header to HTTP requests
- C. Configure CloudFront to add a custom header to origin requests
- D. Create a web ACL in AWS WAF with a rule to validate the presence of a custom header and associate the web ACL with the CloudFront distribution
- E. Create a CloudFront Origin Access Identity (OAI) and add it to the CloudFront distribution. Update the S3 bucket policy to allow access to the OAI only
- F. Create a web ACL in AWS WAF with a rule to validate the presence of a custom header and associate the web ACL with the ALB

Answer: C,E,F

NEW QUESTION # 428

A company owns a chain of travel agencies and is running an application in the AWS Cloud. Company employees use the application to search for information about travel destinations. Destination content is updated four times each year.

Two fixed Amazon EC2 instances serve the application. The company uses an Amazon Route 53 public hosted zone with a multivalue record of travel.example.com that returns the Elastic IP addresses for the EC2 instances. The application uses Amazon DynamoDB as its primary data store. The company uses a self-hosted Redis instance as a caching solution.

During content updates, the load on the EC2 instances and the caching solution increases drastically. This increased load has led to downtime on several occasions. A solutions architect must update the application so that the application is highly available and can handle the load that is generated by the content updates.

Which solution will meet these requirements?

- A. Set up DynamoDB Accelerator (DAX) as in-memory cache. Update the application to use DAX. Create an Auto Scaling group for the EC2 instances. Create an Amazon CloudFront distribution, and set the Auto Scaling group as an origin for the distribution. Update the Route 53 record to use a simple routing policy that targets the CloudFront distribution's DNS alias. Manually scale up EC2 instances before the content updates.
- B. Set up Amazon ElastiCache for Memcached. Update the application to use ElastiCache. Create an Auto Scaling group for the EC2 instances. Create an Application Load Balancer (ALB). Set the Auto Scaling group as a target for the ALB. Update the Route 53 record to use a simple routing policy that targets the ALB's DNS alias. Configure scheduled scaling for the application before the content updates.
- **C. Set up DynamoDB Accelerator (DAX) as in-memory cache. Update the application to use DAX. Create an Auto Scaling group for the EC2 instances. Create an Application Load Balancer (ALB). Set the Auto Scaling group as a target for the ALB. Update the Route 53 record to use a simple routing policy that targets the ALB's DNS alias. Configure scheduled scaling for the EC2 instances before the content updates.**
- D. Set up Amazon ElastiCache for Redis. Update the application to use ElastiCache. Create an Auto Scaling group for the EC2 instances. Create an Amazon CloudFront distribution, and set the Auto Scaling group as an origin for the distribution. Update the Route 53 record to use a simple routing policy that targets the CloudFront distribution's DNS alias. Manually scale up EC2 instances before the content updates.

Answer: C

Explanation:

Explanation: This option allows the company to use DAX to improve the performance and reduce the latency of the DynamoDB queries by caching the results in memory¹. By updating the application to use DAX, the company can reduce the load on the DynamoDB tables and avoid throttling errors¹. By creating an Auto Scaling group for the EC2 instances, the company can adjust the number of instances based on the demand and ensure high availability². By creating an ALB, the company can distribute the incoming traffic across multiple EC2 instances and improve fault tolerance³. By updating the Route 53 record to use a simple routing policy that targets the ALB's DNS alias, the company can route users to the ALB endpoint and leverage its health checks and load balancing features⁴. By configuring scheduled scaling for the EC2 instances before the content updates, the company can anticipate and handle traffic spikes during peak periods⁵.

:

What is Amazon DynamoDB Accelerator (DAX)?

What is Amazon EC2 Auto Scaling?

What is an Application Load Balancer?

Choosing a routing policy

Scheduled scaling for Amazon EC2 Auto Scaling

NEW QUESTION # 429

A company that has multiple AWS accounts is using AWS Organizations. The company's AWS accounts host VPCs, Amazon EC2 instances, and containers.

The company's compliance team has deployed a security tool in each VPC where the company has deployments. The security tools run on EC2 instances and send information to the AWS account that is dedicated for the compliance team. The company has tagged all the compliance-related resources with a key of "costCenter" and a value of "compliance".

The company wants to identify the cost of the security tools that are running on the EC2 instances so that the company can charge the compliance team's AWS account. The cost calculation must be as accurate as possible.

What should a solutions architect do to meet these requirements?

- A. Create a custom report in the organization view in AWS Trusted Advisor. Configure the report to generate a monthly billing summary for the costCenter tagged resources in the compliance team's AWS account.
- **B. In the management account of the organization, activate the costCenter user-defined tag. Configure monthly AWS Cost and Usage Reports to save to an Amazon S3 bucket in the management account. Use the tag breakdown in the report to obtain the total cost for the costCenter tagged resources.**
- C. In the member accounts of the organization activate the costCenter user-defined tag. From the management account, schedule a monthly AWS Cost and Usage Report. Use the tag breakdown in the report to calculate the total cost for the costCenter tagged resources.
- D. In the member accounts of the organization, activate the costCenter user-defined tag. Configure monthly AWS Cost and Usage Reports to save to an Amazon S3 bucket in the management account. Schedule a monthly AWS Lambda function to retrieve the reports and calculate the total cost for the costCenter tagged resources.

Answer: B

Explanation:

<https://docs.aws.amazon.com/awsaccountbilling/latest/aboutv2/configurecostallocreport.html>

NEW QUESTION # 430

.....

Our SAP-C02 study materials are in the process of human memory, is found that the validity of the memory used by the memory method and using memory mode decision, therefore, the SAP-C02 training materials in the process of examination knowledge teaching and summarizing, use for outstanding education methods with emphasis, allow the user to create a chain of memory, the knowledge is more stronger in my mind for a long time by our SAP-C02 study engine.

Test SAP-C02 Simulator Free: https://www.real4exams.com/SAP-C02_braindumps.html

This real SAP-C02 Real4exams exam offers a user-friendly interface, and best self-assessment features unmatched in the Real4exams certification preparation industry, They are the best ever made real exam questions that give the best idea of your AWS Certified Solutions Architect certification SAP-C02 exam, Amazon SAP-C02 Valid Test Answers In addition to theoretical knowledge, we need more practical skills, Real4exams Test SAP-C02 Simulator Free is the best training material vendor for as it integrates a lot of features in the training material it offers, there are real exam questions, there is the interactive test engine, there are frequent updates and there is the authentic training material which is composed by Professional Writers.

Further Plantwide Control Examples, He has also coauthored a data structures textbook with Dr, This real SAP-C02 Real4exams exam offers a user-friendly interface, and best self-assessment SAP-C02 features unmatched in the Real4exams certification preparation industry.

Updated SAP-C02 Valid Test Answers and Practical Test SAP-C02 Simulator Free & Correct AWS Certified Solutions Architect - Professional (SAP-C02) Valid Test Camp

They are the best ever made real exam questions that give the best idea of your AWS Certified Solutions Architect certification SAP-C02 exam, In addition to theoretical knowledge, we need more practical skills.

Real4exams is the best training material vendor for SAP-C02 Dump as it integrates a lot of features in the training material it offers, there are real exam questions, there is the interactive test engine, there are frequent Exam SAP-C02 Practice updates and there is the authentic training material which is composed by Professional Writers.

Now please take a thorough look about the features of the SAP-C02 original questions as follow and you will trust our products, so does our services.
