## Useful Study SPLK-4001 Plan bring you Well-Prepared New SPLK-4001 Test Braindumps for Splunk Splunk O11y Cloud Certified Metrics User

The SPLK-4001 test material, in order to enhance the scientific nature of the learning platform, specifically hired a large number of qualification exam experts, composed of product high IQ team, these experts by combining his many years teaching experience of SPLK-4001 quiz guide and research achievements in the field of the test, to exam the popularization was very complicated content of Splunk O11y Cloud Certified Metrics User exam dumps. Expert team can provide the high quality for the SPLK-4001 Quiz

guide consulting for you to pass the SPLK-4001 exam.

## Splunk O11y Cloud Certified Metrics User Sample Questions (Q56-Q61):

### NEW QUESTION # 56

Which of the following statements are true about local data links? (select all that apply)

- A. Anyone with write permission for a dashboard can add local data links that appear on that dashboard.
- B. Local data links are available on only one dashboard.
- C. Only Splunk Observability Cloud administrators can create local links.
- D. Local data links can only have a Splunk Observability Cloud internal destination.

**Answer: A,B**

Explanation:

Explanation

The correct answers are A and D.

According to the Get started with Splunk Observability Cloud document<sup>1</sup>, one of the topics that is covered in the Getting Data into Splunk Observability Cloud course is global and local data links. Data links are shortcuts that provide convenient access to related resources, such as Splunk Observability Cloud dashboards, Splunk Cloud Platform and Splunk Enterprise, custom URLs, and Kibana logs.

The document explains that there are two types of data links: global and local. Global data links are available on all dashboards and charts, while local data links are available on only one dashboard. The document also provides the following information about local data links:

Anyone with write permission for a dashboard can add local data links that appear on that dashboard.

Local data links can have either a Splunk Observability Cloud internal destination or an external destination, such as a custom URL or a Kibana log.

Only Splunk Observability Cloud administrators can delete local data links.

Therefore, based on this document, we can conclude that A and D are true statements about local data links. B and C are false statements because:

B is false because local data links can have an external destination as well as an internal one.

C is false because anyone with write permission for a dashboard can create local data links, not just administrators.

### NEW QUESTION # 57

To refine a search for a metric a customer types host: test-\*. What does this filter return?

- A. Only metrics with a dimension of host and a value beginning with test-.
- B. Error
- C. Every metric except those with a dimension of host and a value equal to test.
- D. Only metrics with a value of test- beginning with host.

**Answer: A**

Explanation:

The correct answer is A. Only metrics with a dimension of host and a value beginning with test-.

This filter returns the metrics that have a host dimension that matches the pattern test-. For example, test-01, test-abc, test-xyz, etc. The asterisk (\*) is a wildcard character that can match any string of characters<sup>1</sup> To learn more about how to filter metrics in Splunk Observability Cloud, you can refer to this documentation<sup>2</sup>.

1: <https://docs.splunk.com/Observability/gdi/metrics/search.html#Filter-metrics> 2:

<https://docs.splunk.com/Observability/gdi/metrics/search.html>

### NEW QUESTION # 58

Interpreting data in charts can be affected by which of the following? (select all that apply)

- A. Tags
- B. Rollups
- C. Chart resolution
- D. Analytics functions

**Answer: B,C,D**

#### NEW QUESTION # 59

A user wants to add a link to an existing dashboard from an alert. When they click the dimension value in the alert message, they are taken to the dashboard keeping the context. How can this be accomplished? (select all that apply)

- **A. Build a global data link.**
- B. Add a link to the Runbook URL.
- C. Add the link to the alert message body.
- **D. Add a link to the field.**

**Answer: A,D**

Explanation:

The possible ways to add a link to an existing dashboard from an alert are:

Build a global data link. A global data link is a feature that allows you to create a link from any dimension value in any chart or table to a dashboard of your choice. You can specify the source and target dashboards, the dimension name and value, and the query parameters to pass along. When you click on the dimension value in the alert message, you will be taken to the dashboard with the context preserved<sup>1</sup> Add a link to the field. A field link is a feature that allows you to create a link from any field value in any search result or alert message to a dashboard of your choice. You can specify the field name and value, the dashboard name and ID, and the query parameters to pass along. When you click on the field value in the alert message, you will be taken to the dashboard with the context preserved<sup>2</sup> Therefore, the correct answer is A and C.

To learn more about how to use global data links and field links in Splunk Observability Cloud, you can refer to these documentations<sup>1,2</sup>.

1: <https://docs.splunk.com/Observability/gdi/metrics/charts.html#Global-data-links> 2:

<https://docs.splunk.com/Observability/gdi/metrics/search.html#Field-links>

#### NEW QUESTION # 60

The alert recipients tab specifies where notification messages should be sent when alerts are triggered or cleared. Which of the below options can be used? (select all that apply)

- **A. Send to email addresses.**
- B. Export to CSV.
- **C. Send an SMS message.**
- **D. Invoke a webhook URL.**

**Answer: A,C,D**

Explanation:

Explanation

The alert recipients tab specifies where notification messages should be sent when alerts are triggered or cleared. The options that can be used are:

Invoke a webhook URL. This option allows you to send a HTTP POST request to a custom URL that can perform various actions based on the alert information. For example, you can use a webhook to create a ticket in a service desk system, post a message to a chat channel, or trigger another workflow<sup>1</sup> Send an SMS message. This option allows you to send a text message to one or more phone numbers when an alert is triggered or cleared. You can customize the message content and format using variables and templates<sup>2</sup> Send to email addresses. This option allows you to send an email notification to one or more recipients when an alert is triggered or cleared. You can customize the email subject, body, and attachments using variables and templates. You can also include information from search results, the search job, and alert triggering in the email<sup>3</sup> Therefore, the correct answer is A, C, and D.
