HCLSoftware Certified Administrator- HWA 10.2 Sample Questions (Q390-Q395):

NEW QUESTION # 390

MariaDB 10.6 Galera Cluster for HWA 10.2 Database Installation. twinst detects single node but cluster has 3. JDBC URL jdbc:mariadb://node1,node2,node3:3306/HWADB? allowMultiQueries=true fails. Required parameter?

- A. Use port 4444 for Galera sync
- **B. ?usePipelineAuthentication=true&allowLocalInfile=false**
- C. mariadb.cluster.mode=gcomm
- D. Add &multiHostPingBeforeReads=true

Answer: B

Explanation:

Galera multi-primary requires pipeline authentication for load balancing. Full URL:

jdbc:mariadb://node1,node2,node3:3306/HWADB?

allowMultiQueries=true&usePipelineAuthentication=true&autoReconnect=true. Verify cluster health: mysql -e "SHOW STATUS LIKE 'wsrep%'".

NEW QUESTION # 391

Scenario: Performance issues occur when connecting the Dynamic Workload Console to an HCL Workload Automation for Z engine due to slow response times. Which advanced setting can be adjusted to increase the timeout value?

- A. zOSEngineTimeout in TdwcGlobalSettings.xml
- B. planQueryTimeout in global options
- C. commanTimeout in optman settings
- **D. engineReadWriteTimeout in TdwcGlobalSettings.xml**
- E. zConnectionTimeout in localopts

Answer: D

Explanation:

The advanced settings file TdwcGlobalSettings.xml includes parameters to customize timeouts for specific engine types, including the read/write timeout for HCL Workload Automation for Z engines. Increasing this value helps in environments with high latency or large data transfers when querying or modifying plan objects.

NEW QUESTION # 392

Scenario: An administrator observes intermittent SSL handshake failures between fault-tolerant agents upgraded to 10.2 and an MDM using custom certificates post-10.2.1.

What specific considerations apply to FTA certificate propagation? (Select two)

- A. Run make secure after linkage for FTAs
- **B. Automatic propagation via linkage only for dynamic agents**
- C. Use twinst with sslkeyfolder and sslpassword during upgrade
- **D. Manual certificate installation required on FTAs below 10.2 linked to newer MDM**
- E. Update localopts SSL CA certificate path to custom trust file

Answer: B,D

Explanation:

Manual certificate installation required on FTAs below 10.2 linked to newer MDM using custom certificates, as automatic features are version-specific. Automatic propagation via linkage only for dynamic agents handles trust updates seamlessly, unlike FTAs which need manual steps.

NEW QUESTION # 393

Which conditions persisting beyond the threshold trigger automatic failover to a backup master in HCL Workload Automation 10.2? (Select All that Apply)

- A. Dynamic Workload Console disconnected
- **B. Batchman, Mailman, or Jobman processes fail three restart attempts**
- **C. Database connection lost**

- D. Netman port unresponsive
- E. WebSphere Application Server Liberty Base down

Answer: B,C,E

Explanation:

The master self-monitors key components: attempts to restart the Liberty server if down, retries starting core FTA processes (Batchman, Mailman, Jobman) three times, and checks database connectivity; persistent failure in any leads to automatic long-term switch to an eligible backup after the 5-minute threshold.

NEW QUESTION # 394

Orchestration CLI HCL HWA 10.2 deploys Terraform IaC template across 50 regions simultaneously: ocli deploy global_infra.yaml overloads provider endpoints. What command implements throttled parallel deployment?

- A. ocli deploy -parallelism 10 global_infra.yaml
- B. ocli deploy global_infra.yaml --max-parallel=10 --region-concurrency=2
- C. ocli batch deploy global_infra.yaml --jobs 50 --concurrency 10
- D. ocli deploy --throttle 10 global_infra.yaml

Answer: B

Explanation:

Throttled deployment prevents provider rate limiting. ocli deploy global_infra.yaml --max-parallel=10 --region-concurrency=2 limits 10 simultaneous templates across 2 regions each. 50 regions complete without 429 errors, ocli status shows controlled rollout.
