

EMT Exam Dumps Get Success With Minimal Effort

P.S. Free 2026 NREMT EMT dumps are available on Google Drive shared by TestInsides: https://drive.google.com/open?id=1oKCCc_4baUSS93fTAwliEJounLGdCnsII

Free demo is available for EMT training materials, so that you can have a better understanding of what you are going to buy. Free demo will represent you what the complete version is like. We suggest you try free demo before buying. In addition, EMT training materials are high quality and accuracy, since we have a professional team to collect the latest information of the exam. Therefore if you choose EMT Exam Dumps of us, you can get the latest version timely. We provide you with free update version for one year for EMT training materials.

There are Candidates must know the topics before they start of preparation.

Our **Test Prep EMT Exam Dumps** will include the following topics:

- Cardiology and Resuscitation 19%
- Airway, Respiration, and Ventilation 20%
- EMS Operations 12%
- Medical / Obstetrics / Gynecology 28%
- Trauma 21%

There is the guide to get ready for the Test Prep EMT Exam

if you have a limited time, we are now sure that you can take the exams very easily and in a few hours. Our exam dumps and pdf

study materials are valid, best, simple and easy to understand. By using our vendor **Test Prep EMT exam dumps**, you will pass your exams with good grades. To get the certification it is a bit hard work but You don't need to take any worry about it because these Practice exams had been written by our expert team. Which able you to pass your Test Prep EMT Exam easily. And individuals and professionals passed their Test Prep EMT Exams by using our exam dumps.

There are vendors on the market that claim to offer real exam questions, tips, practice exams, study guides, and many other names, but most of them are resellers who don't refresh their stuff regularly. We get the problem of individuals' faces when they spend their time studying outdated content. This is the reason why we update our practice test and exam dumps regularly as experienced in the Real Test. The exam dumps provided by the TestInsides are authentic, up-to-date and verified by certified specialists. We maintain a valid question bank that is updated by checking the update daily.

We offer an excellent study guide and excellent solutions for all professionals who wish to pass the certification exams in the first attempt. By taking the practice material designed by our specialists, and after it you'll be able to pass your exams in the first attempt. We offer a 100% guarantee of success and we are sure you will succeed.

TestInsides gives everything you require to pass the certification exam. If you are looking for certification and are not successful, it is time for you to try what we offer.

Obviously, at certificate-qusetions.com, we give certification practice exams and exam dumps, as we think that practice exams are the most important thing an expert can do when preparing for a certification exam (in the IT certification area or otherwise).

When you start preparing for the certification exam, there are some basic but powerful methods that allow you to identify everything in your preparation. Many experts prepare the certification from books, so they are dissatisfied if unfortunately, they fail in the exam. The fact is that understanding the root of the information is only a tiny part of the preparation that most individuals have to pass the certification exams.

No one likes failure, mostly in such complex fields where certification requires a lot of research, planning and attention. A single attempt is so tough that it could even break the nerves of the students. Our exam dumps are so valid and best which will able you to pass your NREMT 77-420 without any pain.

Smart Candidates who want to build a solid foundation in all exam topics and related technologies usually combine video lectures with study models to reap the benefits of both but there is one crucial preparation tool as often overlooked by most candidates the practice exams.

NREMT Emergency Medical Technicians Exam Sample Questions (Q105-Q110):

NEW QUESTION # 105

Which of the following elements proves tort negligence in a court of law?

- A. Abandonment
- **B. Causation**
- C. False imprisonment
- D. Assault and battery

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The legal concept of tort negligence in EMS requires the plaintiff to establish four elements:

- * Duty to act
- * Breach of that duty
- * Damages (harm caused)
- * Causation- a direct link between the EMT's action/inaction and the harm caused Causation (often termed "proximate cause") is the essential element that connects the EMT's breach to the patient's injury or outcome. Abandonment, assault, and false imprisonment are other intentional torts, but not core elements of proving negligence.

NEW QUESTION # 106

A 60-year-old patient has severe pain in the right hip after falling down four stairs. They have deformity and shortening of the right leg. The vital signs are BP 164/88, P 90, R 18, and SpO₂ 96% on room air. What actions should the EMT take for this patient? Select the two answer options that are correct.

- **A. Apply mild traction to the right leg.**
- B. Place on the cot and elevate the legs.
- **C. Splint with blankets and pillows.**
- D. Apply oxygen via a non-rebreather mask.
- E. Use a pelvic binder.

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation (Based on NREMT standards):

The patient's signs-hip pain, deformity, and leg shortening-are consistent with a proximal femur or hip fracture. NREMT trauma care emphasizes immobilization, pain reduction, and prevention of further injury.

Option C (Apply mild traction) is appropriate to reduce muscle spasm and pain when a femur fracture is suspected and no contraindications are present.

Option D (Splint with blankets and pillows) is correct because soft splinting stabilizes the injury and limits movement during transport.

Option A is not required because oxygen saturation is adequate.

Option B is contraindicated because leg elevation may worsen pain or bleeding.

Option E is reserved for unstable pelvic fractures, not isolated hip fractures.

NREMT emphasizes gentle handling, immobilization, and rapid transport for suspected hip fractures.

NEW QUESTION # 107

Ice crystals are found in several medications during a daily check. What should the EMT do next?

- **A. Discard the medications.**
- B. Warm the medications prior to administration.
- C. Reserve the medications for restock.
- D. Check to see if the medications are expired.

Answer: A

Explanation:

NREMT medication management standards require EMTs to ensure that all medications are stored properly and are safe for administration. The presence of ice crystals indicates that a medication has frozen, which can alter its chemical stability, concentration, and effectiveness.

Option C is correct because medications that have frozen must be discarded and replaced, even if they later thaw. Freezing can cause separation of active ingredients or damage to the medication vial or syringe.

Option A is insufficient because expiration status does not address medication integrity.

Option B is incorrect because frozen medications are unsafe and should not be reused.

Option D is dangerous and explicitly prohibited, as warming does not restore medication safety.

NREMT emphasizes strict medication safety checks to prevent patient harm and ensure effective treatment.

NEW QUESTION # 108

A 3-year-old patient has a sore throat and fever. They are drooling. Which of the following actions should the EMT take?

- A. Perform a finger sweep.
- B. Administer oxygen via BVM.
- C. Transport in a position of comfort.
- D. Inspect the airway for swelling.

Answer: C

Explanation:

This pediatric presentation—fever, sore throat, and drooling—is highly concerning for acute epiglottitis, a life-threatening airway emergency emphasized in NREMT airway education. Epiglottitis causes rapid swelling of the epiglottis and surrounding tissues, which can lead to sudden and complete airway obstruction, especially in young children.

Option D is correct because the EMT should minimize agitation and transport the child in a position of comfort, typically sitting upright. NREMT guidelines stress that children with suspected epiglottitis should be kept calm, allowed to assume their preferred position, and transported rapidly without unnecessary interventions that could provoke airway spasm.

Option A is incorrect because finger sweeps are contraindicated unless a solid foreign body is clearly visible.

Performing a finger sweep may worsen obstruction or trigger complete airway closure.

Option B is incorrect because positive-pressure ventilation with a BVM can increase agitation and is not indicated unless the patient is in respiratory failure. Oxygen may be offered gently, but forcing a BVM is dangerous.

Option C is incorrect because visual inspection of the airway using a tongue depressor can precipitate sudden airway obstruction and is specifically contraindicated by NREMT teaching.

The priority per NREMT is airway preservation through calm handling, rapid transport, and avoidance of invasive airway maneuvers.

NEW QUESTION # 109

What are possible complications of using continuous positive airway pressure (CPAP)? Select the two correct options.

- A. Pulmonary edema
- B. Hypotension
- C. Bronchospasms
- D. Myocardial infarction
- E. Feeling of suffocation

Answer: B,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

CPAP works by delivering continuous positive pressure to keep alveoli open and improve oxygenation.

However, complications include:

* Hypotension: Due to reduced venous return and cardiac preload

* Feeling of suffocation: Common psychological reaction to a tight-fitting mask and forced airflow. It is used to treat, not cause, pulmonary edema. It does not induce bronchospasm or myocardial infarction.
