

New Fortinet NSE6_SDW_AD-7.6 Test Pass4sure | Latest NSE6_SDW_AD-7.6 Brindumps Free

BONUS!!! Download part of ExamBoosts NSE6_SDW_AD-7.6 dumps for free: https://drive.google.com/open?id=1wb_EEsROdfQBwRqy027ZoKkPLscAgrx

First and foremost, even though our company has become the staunch force in this field for almost ten years and our NSE6_SDW_AD-7.6 exam questions have enjoyed such a quick sale in the international market we still keep an affordable price for our customers. Second, we have prepared free demo in this website for our customers to have the first-hand experience of the NSE6_SDW_AD-7.6 Latest Torrent compiled by our company before making their final decision. So do not hesitate any more, just hurry up to buy our NSE6_SDW_AD-7.6 test question which will never let you down.

Fortinet NSE6_SDW_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Rules and routing: This section explains how to design and apply SD-WAN rules to control traffic steering across multiple WAN links. It also includes configuring SD-WAN routing to ensure proper path selection and connectivity between networks.
Topic 2	<ul style="list-style-type: none"> SD-WAN setup: This domain covers how to deploy an enterprise SD-WAN environment by designing SD-WAN members and zones and configuring them for efficient traffic management. It also focuses on implementing Performance SLAs to monitor link quality and ensure applications use the best available path.
Topic 3	<ul style="list-style-type: none"> Centralized management: This domain focuses on deploying and managing SD-WAN using FortiManager for centralized control. It includes implementing branch configuration deployment and using SD-WAN Manager with overlay orchestration to simplify large-scale network management.
Topic 4	<ul style="list-style-type: none"> SD-WAN troubleshooting: This domain explains how to diagnose and resolve issues related to SD-WAN operation. It includes troubleshooting SD-WAN rules, session behavior, routing problems, and ADVPN connectivity to maintain reliable network performance.
Topic 5	<ul style="list-style-type: none"> Advanced IPsec: This section covers the deployment of advanced IPsec configurations within SD-WAN environments. It includes implementing hub-and-spoke IPsec topologies, configuring ADVPN, and supporting multihub, multiregion, and large-scale secure SD-WAN deployments.

Latest Fortinet NSE6_SDW_AD-7.6 Brindumps Free - NSE6_SDW_AD-7.6 Passed

Three formats of Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator (NSE6_SDW_AD-7.6) practice material are always getting updated according to the content of real Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator (NSE6_SDW_AD-7.6) examination. The 24/7 customer service system is always available for our customers which can solve their queries and help them if

they face any issues while using the NSE6_SDW_AD-7.6 Exam product. Besides regular updates, ExamBoosts also offer up to 1 year of free real Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator (NSE6_SDW_AD-7.6) exam questions updates.

Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator Sample Questions (Q17-Q22):

NEW QUESTION # 17

Refer to the exhibit, which shows the SD-WAN rule status and configuration.

SD-WAN rule status and configuration

```
branch1_fgt # diagnose sys sdwan service4 3

Service(3): Address Mode(IPV4) flags=0x4200 use-shortcut-sla use-shortcut
Tie break: cfg
Shortcut priority:2
Gen(43), TOS(0x0/0x0), Protocol(0): src(1->65535):dst(1->65535), Mode(priority),
link-cost-factor(packet loss), link-cost-threshold(10), health-check(HUB1_HC)
Members(3):
  1: Seq_num(4 HUB1-VPN1 HUB1), alive, latency: 96.349, selected
  2: Seq_num(5 HUB1-VPN2 HUB1), alive, latency: 141.278, selected
  3: Seq_num(6 HUB1-VPN3 HUB1), alive, latency: 190.984, selected

Src address(1):
  10.0.1.0-10.0.1.255

Dst address(1):
  10.0.0.0-10.255.255.255

branch1_fgt (service) # show
config service
edit 3
  set name "Corp"
  set mode priority
  set dst "Corp-net"
  set src "LAN-net"
  set health-check "HUB1_HC"
  set link-cost-factor packet-loss
  set link-cost-threshold 0
  set priority-members 4 5 6
next
```

Based on the exhibit, which change in the measured latency will first make HUB1-VPN3 the new preferred member?

- A. When HUB1-VPN1 has a latency of 200 ms
- B. When HUB1-VPN3 has a latency of 90 ms
- C. When HUB1-VPN3 has a lower latency than HUB1-VPN1 and HUB1-VPN2
- D. When HUB1-VPN3 has a latency of 80 ms

Answer: A

Explanation:

The rule is in priority mode with HUB1-VPN1 (seq 4) as the first preferred member, HUB1-VPN2 second, and HUB1-VPN3 third. Latency itself does not cause HUB1-VPN3 to become preferred unless a higher- priority member fails SLA. If HUB1-VPN1's latency exceeds the SLA threshold (here simulated by latency reaching 200 ms), FortiGate stops using it and moves down the priority list. That is when HUB1-VPN3 could become the active path.

NEW QUESTION # 18

You are tasked with configuring ADVPN 2.0 on an SD-WAN topology already configured for ADVPN. What should you do to implement ADVPN 2.0 in this scenario?

- A. Update the IPsec tunnel configurations on the hub.
- B. Update the IPsec tunnel configuration on the branches.

- C. Delete the existing ADVPN configuration and configure ADVPN 2.0.
- **D. Update the SD-WAN configuration on the branches.**

Answer: D

Explanation:

"To adjust the configuration for ADVPN 2.0: - Edit the SD-WAN template... - IPsec templates: No changes required..."
Therefore, the configuration changes occur with the SD-WAN configuration and not the IPsec configuration.

NEW QUESTION # 19

Refer to the exhibits.

SD-WAN zone configuration on FortiManager

ID	Interface	Gateway	Cost	Priority	Status	Installation Target
virtual-wan-link						
underlay						
1						
2	port1	0.0.0.0	0	1	Enable	
HUB1	port2	0.0.0.0	0	1	Enable	
4	HUB1-VPN1	0.0.0.0	0	1	Enable	1 Device in Total branch1_fgt[root]
5	HUB1-VPN2	0.0.0.0	0	1	Enable	

Policy package configuration

#	Name	From	To	Source	Destination	Install On
Corp-SOT_BBLK(1/1 Total:1)						
2	DIA	LAN	underlay	LAN-net	all	Installation Targets
3	To Hub-Overlay	LAN	HUB1-VPN1	all	all	Installation Targets
Implicit(4/4 Total:1)						
4	Implicit Deny	any	any	all	all	

The exhibits show the SD-WAN zone configuration of an SD-WAN template prepared on FortiManager and the policy package configuration.

When the administrator tries to install the configuration changes, FortiManager fails to commit.

What should the administrator do to fix the issue?

- A. Configure a normalized interface for the IPsec tunnel HUB1-VPN1.
- **B. Configure HUB1 as the destination of policy 3.**
- C. Configure branch1_fgt as the installation target for policy 3.
- D. Configure both HUB1-VPN1 and HUB1-VPN2 as the destination of policy 3

Answer: B

Explanation:

Policy 3 points traffic To = HUB1-VPN1, which is an SD-WAN member interface. In SD-WAN you must reference the SD-WAN zone (the logical interface) in policies, not its member tunnels. Change the policy's To interface to the zone HUB1, and the install will succeed.

NEW QUESTION # 20

Exhibit.

```
SD-WAN rules status and configuration

branch1_fgt # diagnose sys sdwan service4 3

Service(3): Address Mode(IPV4) flags=0x4200 use-shortcut-sla use-shortcut
Tie break: cfg
Shortcut priority: 2
Gen(43), TOS(0x0/0x0), Protocol(0): src(1->65535):dst(1->65535), Mode(priority),
link-cost-factor(packet loss), link-cost-threshold(0), health-check(HUB1_HC)
Members(3):
  1: Seq_num(4 HUB1-VPN1 HUB1), alive, packet loss: 2.000%, selected
  2: Seq_num(5 HUB1-VPN2 HUB1), alive, packet loss: 4.000%, selected
  3: Seq_num(6 HUB1-VPN3 HUB1), alive, packet loss: 12.000%, selected
Src address(1):
  10.0.1.0-10.0.1.255

Dst address(1):
  10.0.0.0-10.255.255.255

branch1_fgt (service4) # show
config service
  edit 3
    set name "Corp"
    set mode priority
    set dst "Corp-net"
    set src "LAN-net"
    set health-check "HUB1_HC"
    set link-cost-factor packet-loss
    set link-cost-threshold 0
    set priority-members 6 4 5
  next
```

Refer to the exhibit, which shows the SD-WAN rule status and configuration.

Based on the exhibit, which change in the measured packet loss will make HUB1-VPN3 the new preferred member?

- A. When HUB1-VPN1 has 4% packet loss
- B. When HUB1-VPN3 has 4% packet loss
- C. When all three members have the same packet loss
- D. When HUB1-VPN1 has 12% packet loss

Answer: C

NEW QUESTION # 21

(Refer to the exhibit.

The screenshot shows the configuration page for an SD-WAN rule named 'Social_app'. The 'Status' is 'Enabled'. Under the 'Destination' section, the 'Internet service' option is highlighted in yellow. Below this, the 'Interface selection strategy' is set to 'Manual', with the subtext 'Manually assign outgoing interfaces.'

You configure SD-WAN on a standalone FortiGate device.

You want to create an SD-WAN rule that steers traffic related to Facebook and LinkedIn through the less costly internet link. What must you do to set Facebook and LinkedIn applications as destinations from the GUI? Choose one answer.)

- A. In the Internet service field, select Facebook and LinkedIn.
- B. Enable the visibility of the applications field as destinations of the SD-WAN rule.
- C. Install a license to allow applications as destinations of SD-WAN rules.
- D. You cannot configure applications as destinations of an SD-WAN rule on a standalone FortiGate device.

Answer: A

Explanation:

In FortiOS 7.6, SD-WAN rules can steer traffic based on Internet Services, which represent predefined application and service signatures maintained by FortiGuard. Common applications such as Facebook and LinkedIn are included in the Internet Service database.

According to the FCSS SD-WAN 7.6 curriculum, when configuring an SD-WAN rule from the GUI on a standalone FortiGate device, applications are selected as destinations using the Internet service field, not by enabling a separate application destination field. The exhibit highlights the Internet service option under the Destination section, which is the correct method to match traffic for specific applications.

Option A is incorrect because there is no GUI option to enable application visibility as destinations for SD-WAN rules. Application matching is already abstracted through Internet Services.

Option C is incorrect because standalone FortiGate devices fully support application-based steering using Internet Services in SD-WAN rules.

Option D is incorrect because no additional license is required to use Internet Services in SD-WAN rules.

This functionality is included in FortiOS and relies on the built-in FortiGuard Internet Service database.

Therefore, to steer Facebook and LinkedIn traffic through a specific WAN link, you must select Facebook and LinkedIn in the Internet service field, which corresponds to option B.

NEW QUESTION # 22

.....
